19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Riparian Ecosystem Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"California Riparian Forests and Wetlands" are on the list of the 21 most Endangered Ecosystems in the United States. "Endangered Ecosystems: A Status report on America's Vanishing Habitat and Wildlife (Defenders of Wildlife, Washington DC 1995) "According to the September 1990 Smithsonian, degradation of riparian areas in the West is particularly important to control because while they represent 2 percent of the land area, they support as much as 80 percent of the wildlife." EPA "Managing Nonpoint Source Pollution" 1992 pg 189

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Riparian Ecosystem Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

* 341 - RIPARIAN ECOSYSTEM LOSS.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 342 - RIPARIAN SCRUB LOSS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
Riparian Scrub Loss.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Riparian Scrub Loss.

1b. If no objective criteria are used please state that clearly.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 347 - CLOSED-CONE PINE-CYPRESS HABITAT LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Closed-Cone Pine-Cypress Habitat Loss.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This habitat occurs in Monterey and Santa Cruz Counties.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Closed-Cone Pine-Cypress Habitat Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 348 - COASTAL OAK WOODLAND HABITAT LOSS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
Coastal Oak Woodland Habitat Loss.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

This habitat occurs extensively in inland Monterey and Santa Cruz Counties.

"Pest rotting coastal region's oaks" Herald Headline Nov 10, 1999

"Bark beetles are killing trees that are overtly healthy," said Steve Tjesvold, a farm advisor with UC Cooperative Extension.

"The bark beetles are at epidemic proportions" said Tjesvold. The species affected are coast live oak and tanoak.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Coastal Oak Woodland Habitat Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 349 - COASTAL SCRUB LOSS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on Coastal Scrub Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This habitat occurs extensively in coastal Monterey and Santa Cruz Counties.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Coastal Scrub Loss.

1b. If no objective criteria are used please state that clearly.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 352 - WILDLIFE HABITAT LOSS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Wildlife Habitat Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Conservation Biology's central tenets are not hard to grasp. For a natural habitat to be viable (and for a conservation strategy to succeed) there is a handful of general rules: bigger is better; a single large habitat is usually better than several small, isolated ones; large native carnivores are better than none; intact habitat is preferable to artificially disturbed habitat; and connected habitats are usually better than fragmented ones." Sierra Magazine Sept/Oct 1995 p 97

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Wildlife Habitat Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 354 - SPECIES IMBALANCE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Species Imbalance.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Removal of predators (e.g. bears) causes their prey (e.g. deer) to increase populations and those deer can cause an increase in vegetation loss.

"A population attacked frontally by shooting or trapping does not have to contend with deteriorating habitat but, in fact, is favored by improved habitat." Caughley 1978, Analysis of vertebrate populations, p 200 John Wiley & Sons cited by California Department of Fish and Game
"Furbearing and Nongame Mammal Trapping" ED, April 6, 2001

An increase in urban density can cause an increase in raccoon populations and their impacts on resident humans. Killing raccoons typically causes increases in raccoon populations.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Species Imbalance.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 355 - GROUNDWATER FAUNA.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Groundwater Fauna.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Groundwater Fauna.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 356 - GROUNDWATER LEVEL PATTERN IMPACTS ON VEGETATION.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
Groundwater Level Pattern Impacts on Vegetation.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The vertical distribution of roots of willows and cottonwoods is related to the groundwater regime to which they are accustomed. Trees that had experienced stable groundwater levels were more susceptible to stress from groundwater decline than trees that had experienced fluctuating groundwater levels.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Groundwater Level Pattern Impacts on Vegetation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 357 - COLONIZATION BY INVASIVE NON-NATIVE PLANTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Colonization by Invasive Non-Native Plants.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Human activity distributes a wide array of animals, plants, insects and microorganisms to new locations.

"Whether introduced intentionally or accidentally, invasive species can:
1) prey on, parasitize, outcompete, or hybridize with native species to the point of extirpation or extinction, and 2) disrupt the function of native communities and ecosystems." "The Science of Invasive Species"
Nov 2001 report, Union of Concerned Scientists.

"Biological pollution" of exotic or non-native species can cause the loss of habitat for ESA listed plants and animals. "More than 1000 exotic plants have been introduced in [California] since 1769. Eucalyptus is one of about 50 plants that have escaped cultivation and now run roughshod over wild areas." Associated Press Sept. 26 1999

Shipping Spreading Invasive Species
Shipping brought alien plants into California perhaps in the wool of sheep, in hay carried for livestock, or in the droppings of domestic

animals. "Destruction of California" Dasmann, 1966, Collier Books

Ballast Discharge Spreading Invasive Species
Ship ballast discharge has infected the Great lakes with the zebra mussel, round goby and a water flea (*Cercopagis pengoi*).

In just a handful of years the flea has exceeded 600 fleas per cubic meter of surface water in Lake Ontario - over the entire lake. It has already infested six of NY's finger lakes and it is only a matter of time before the flea enters the Mississippi river. It has few known N American predators.

At a minimum it is expected to starve out the larve of non-commercial fish, but by doing so it could indirectly trigger the collapse of to predators. "In the worst case 'we could wake up one morning with no fish in the Great Lakes, except perhaps carp.'" Science news Nov 13 1999

"In the Coastal fog belt of California, from Monterey County northward, Pampas type grasses and Scotch and French Broom are invading disturbed soils, grasslands, open woodlands and roadsides. They crowd out native plants and wildflowers, changing the appearance of the natural landscape, decreasing the food and habitats of wildlife and creating what many consider an eyesore." (Invasive Exotic Plants in Monterey County, brochure by Monterey County Planning Dept #293-0274 4/98)

Bulldozing, including new road cuts and clearing old roads, leaves an excellent opportunity for introduction and enhancement of Pampas type grasses and Scotch and French Broom.

"In the Coastal fog belt of California, from Monterey County northward, Pampas type grasses and Scotch and French Broom are invading DISTURBED soils, grasslands, open woodlands and roadsides. They crowd out native plants and wildflowers, changing the appearance of the natural landscape, decreasing the food and habitats of wildlife and creating what many consider an eyesore." (Invasive Exotic Plants in Monterey County, brochure by Monterey County Planning Dept. #293-0274 4/98)

California harmful exotics and non-natives include:
French Broom (*Cytisus monspessulanus*)
Pampas Grasses (*Cortaderia jubata* and *Cortaderia sellowana*)
Scotch Broom

"Broom forms dense thickets in many habitats, shading out native flora and tree seedlings and can limit access to recreational trails for hiking, fishing and horseback riding." (Invasive Exotic Plants in Monterey County, brochure by Monterey County Planning Dept. #293-0274 4/98)

Bullfrog - eats tadpoles of the federally listed California Red-Legged Frog (*Rana aurora draytonii*).

Bluegum Eucalyptus - which sheds bark and leaves, chokes out native plants reducing food for owls, deer and other animals. They spread so quickly they become fire hazards contributing to the Oakland Hills fire in 1991 which killed 16 people and destroyed 3000 homes.

Green Crab (*Carcinus maenas*) - eats native clams, oysters and other crabs. It threatens some birds, fish and other crabs by eating their food supply.

Hydrilla (*Hydrilla verticillata*) - clogs waterways, blocks light for other plant species and reduces fish spawning and feeding areas.

Flathead Catfish - eats chiefly other fish including endangered species.
Dandelions

Nutria - "devastating wetlands and habitat for Bald Eagles" AP Sept. 26 1999.

"Rats and feral cats have eliminated ground nesting birds in many areas, including Jamaica, Australia, New Zealand, and the Galapagos Islands." Environmental Science; Morgan, Moran & Weirsm; W.C. Brown Pub. 1993

Exotic Species. More than 130 exotic (nonnative) species have been introduced to the Great Lakes since 1800, nearly a third carried in by ships. Some exotics have profoundly damaged native species. A troublesome recent invader, the zebra mussel, probably entered the lakes via ballast water discharge from an oceangoing vessel. The full impacts of the mussel are not yet known, but they are potentially great. A prolific breeder, the mollusk devours microscopic plants at the foundation of the food web and may create a food shortage for fish that graze on these plants, ultimately threatening predator fish such as walleye, salmon, and lake trout. Colonies also foul and clog water intake pipes to water treatment and power plants.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Colonization by Invasive Non-Native Plants.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 358 - MEADOWS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
of
Meadows.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Meadows.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 359 - SPECIES EXTINCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Species Extinction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Man is incapable of making permanent changes in the cosmos. Except one.
In only one way can man truly make his mark upon time and life and evolution: by exterminating any species of plant or animal. If he does that, if he eradicates any species or allows to fail any line of evolution through time, he will have permanently altered the life potential of the cosmos for as long as matter and energy exist."
Roger Caras, Speech, Yale School of Forestry, 10 April, 1978 (DEQ)

How much money and effort would we devote to preserve an animal species if we had found one on the moon? Is any species on earth less precious?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Species Extinction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 360 - BIODIVERSITY LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Biodiversity Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Biodiversity can be measured with genetic diversity, species diversity and ecosystem diversity. Biodiversity varies naturally with local surface (land or water), latitude / temperature (bird species vary from 10 to over 600 from arctic to equator), climate rainy vs desert).

Agriculture is the extreme opposite of biodiversity in that it typically involves genetically identical plants (or animals), removal of all non-harvested species and extremely controlled identical ecosystems - one genetic individual, one species and one uniform ecosystem.

Loss of Biodiversity is the only process that is wholly irreversible.
Its consequences are also the least predictable. "Threats to Biodiversity" by E.O. Wilson, Scientific American Sept 1989 pg 108

"The more diverse the plant community, the less its productivity declines during dry years and the faster it rebounded."
"Biodiversity really is an insurance policy against catastrophe. Areas with more species are more stable."
Science News, Feb 5 1994 pg 84,85

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Biodiversity Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 361 - GENETIC DIVERSITY LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Genetic Diversity Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

A Genetic Diversity Bottleneck is a period of reduced population size.

Genetic diversity is important in a species to provide extinction resistance due to disease. If all individuals in a species are identical clones, they will have identical resistance to a disease. This means when a disease kills one individual - all other members of the species (100 percent) can be killed just as easily by that disease.

Declining vs Rising Population

There is a large significant, measurable difference in genetic variability when you reach a Minimum Viable Population (MVP) number by a decrease or an increase in the population.

Using an arbitrary number of 1000 individuals as the initial MVP of a population, when arriving at MVP through population LOSS, you could have as many as 1000 genetically distinct individuals.

When arriving at the 1000 individuals through population GAIN, you could have as few as 2 genetically distinct individuals (with minor mutations).

When a population reaches its population from an increase and in the absence of better data, we must assume worst case for genetic diversity.

When arriving at the 1000 individuals through population gain from a population low of 50 animals, you may have a MAXIMUM of 49 genetically distinct animals (with minor mutations) or as few as 2 genetically distinct animals.

Forty-nine genetically distinct individuals is a magnitude less than the 1000 genetically distinct individuals. Two genetically distinct animals is another MAGNITUDE fewer animals.

The real MVP numbers of animals for endangered and threatened thresholds need to increase by at least a magnitude, and possibly by a second magnitude, and it needs to include a time or a generation criteria to allow for genetic diversity to increase.

Only after specific, not sample, measurements show 1000 animals of measureable wide genetic diversity should legal protection for a threatened species occur.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Genetic Diversity Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 362 - ILLEGAL & INTENTIONAL AGENCY DELAY LISTING ENDANGERED & THREATENED SPECIES.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Illegal & Intentional Agency Delay Listing Endangered & Threatened Species.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

US-Fish & Wildlife Service (FWS) and US-National Marine Fisheries Service, SW Region - the two federal agencies charged with protecting endangered species refuse and delay listing species as Endangered & Threatened even when scientific evidence is substantial.

The Center for Biodiversity has had to sue FWS at least 4 times over ten years to list the Northern Goshawk.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Illegal & Intentional Agency Delay Listing Endangered & Threatened Species.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 363 - IMMIGRATION VS LOCAL POPULATION RECOVERY.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Immigration vs Local Population Recovery.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"In the Great Lakes, bald eagle numbers climbed from 26 pairs to 134 pairs between 1977 and 1993, but this recovery may be more apparent than real. US-Fish & Wildlife Service biologists believe that the growth of the Great Lakes population depends largely on immigration of eagles hatched in cleaner [non-polluted] areas." OSF, pg 154

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Immigration vs Local Population Recovery.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 364 - LOSS OF UNLISTED BUT THREATENED AND ENDANGERED SPECIES.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on
Loss of Unlisted but Threatened and Endangered Species.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Habitat destruction is the leading cause of species extinction."
-Nature, 24 Feb 2000 p 843

"Within the past decade, at least 34 species, subspecies, or vertebrate populations have become extinct while awaiting consideration for federal protection." President's Council on Environmental Quality 1990

In 1988 Congress noted that 950 species were prime candidates for listing for which the Service had taken no action. (Curtin's Land Use 1998) This shows that many species are Genuinely Threatened and Endangered with Extinction - yet they have no formal protection under the Endangered Species Act.

The Lingcod is just one of many rockfish that is in trouble. It is thought to be down to about 3 percent of its former population.
-Herald Dec 3 1999

In the last 200 years the United States has lost up to 490 species of native plants and animals with another 9,000 now at risk. (The 1993 Information Please Environmental Almanac, compiled by World Resources Institute (Houghton Mifflin, 1993, p 159)

We want you to identify and analyze the impacts on those species and habitats which are genuinely threatened but have not been officially listed.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Loss of Unlisted but Threatened and Endangered Species.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 365 - LOSS OF UNLISTED BUT THREATENED AND ENDANGERED SPECIES HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Loss of Unlisted but Threatened and Endangered Species Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Loss of Unlisted but Threatened and Endangered Species Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 366 - GENUINE BUT UNDESIGNATED CRITICAL HABITAT FOR ESA LISTED SPECIES.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Genuine but Undesignated Critical Habitat for ESA Listed Species.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- "Habitat destruction is the leading cause of species extinction."
-Nature, 24 Feb 2000 p 843
- Illegal & Intentional Agency Delay in Mapping Critical Habitat
- From 1996 to 2000 US-Fish & Wildlife Service (FWS) has failed to map
"Critical Habitat" for any species until forced to do so by lawsuit.
- US-Fish & Wildlife Service (FWS) is required by federal law to designate
Critical Habitat with a maximum delay from the date of listing of one
year. Their record of failing to do so and violating the
Endangered
Species Act (ESA) is almost perfect.
- Between April 1996 and September 1998, the FWS listed 179 species as
"Threatened" or "Endangered" under the ESA, and not once has the agency
voluntarily designated critical habitat for any of them even though
required to by law. Every single critical habitat designation that has
- been made has been forced upon the agency by a federal judge in response
to a citizen-inspired lawsuit.
- Thus there are large areas of real critical habitat for listed species
exists, but is not officially designated.
We want you to identify and analyze the impacts on those species'
habitats.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Genuine but Undesignated Critical Habitat for ESA Listed Species.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,
credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 367 - HABITAT LOSS CAUSED EXTINCTION.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
Habitat Loss Caused Extinction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Habitat destruction is the leading cause of species extinction."
-Nature, 24 Feb 2000 p 843

"...in patches [of protected areas] of between one and 20 square kilometers, a common size for reserves and parks in the tropics and elsewhere, 20 percent or more of the [bird] species disappear within 50 years." E.O. Wilson, Scientific American Sept 1989 pg 112

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Habitat Loss Caused Extinction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 368 - SINGLE SPECIES ANALYSIS VS ECOLOGICAL ANALYSIS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
Single Species Analysis vs Ecological Analysis.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

For example: Fish
Single species management, while perhaps effective in preventing local extinctions of some [fish] stocks, has pitted the needs of listed stocks against unlisted stocks, resulting in an unworkable tool in fisheries management and restoration. Nehlson et al. 1991 and Mills et al. 1997

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Single Species Analysis vs Ecological Analysis.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 369 - CHANGES IN FOOD SUPPLY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Changes in Food Supply.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Wildlife Corridor Loss, RN
California Fish & Game Code 2781 "Corridors of natural habitat must be preserved to maintain the genetic integrity of California's wildlife."

"Few animals or plants would be able to cross Los Angeles on the way to the promised land." Robert L. Peters, in The Challenge of Global Warming, 1989

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Changes in Food Supply.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 370 - STRESS IN WILDLIFE FROM NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Stress in Wildlife from Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Stress in Wildlife from Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 371 - TRANSPLANTATION.

"Salvaging and relocating plants has not shown to be successful and, therefore is not appropriate mitigation."
US-FWS letter to Monterey County Dec 10 1997

The June 24, 1994 letter from California Department of Fish and Game
Regional Manager Brian Hunter states "Transplantation and propagation have not been shown to be effective measures to mitigate the loss of rare plant species; success rates are typically very low."

"Rare plants are generally rare not just because there is a lack of individuals, but because of the lack of suitable habitat; and an increase in numbers of individuals is not usually effective in increasing overall population numbers (or replacing lost individuals) unless there is a concomitant increase in the available habitat."

***** (WARNING):
"While relocation of rare species has met with limited success in some species, it is generally successful only in areas where suitable habitat exists that, for whatever reason, is not currently occupied by the species of concern."

Is the Transplantation experimental?

Is the proposed site currently at carrying capacity?

Why are the species absent from that area now?

Is the proposed habitat unsuitable?

Is there a proven ability to persist through environmental extremes?
What evidence is there that the alternative site can support a viable

population over the range of environmental conditions that can be expected to occur through time?

Does listing agency accept transplantation as an alternative to protecting naturally occurring populations?

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Transplantation.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Transplantation.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Transplantation.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Transplantation.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Transplantation.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Transplantation.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 372 - PROPOGATION.

The June 24, 1994 letter from California Department of Fish and Game Regional Manager Brian Hunter states "Transplantation and propagation have not been shown to be effective measures to mitigate the loss of rare plant species; success rates are typically very low."

"Rare plants are generally rare not just because there is a lack of individuals, but because of the lack of suitable habitat; and an increase in numbers of individuals is not usually effective in increasing overall population numbers (or replacing lost individuals) unless there is a concomitant increase in the available habitat."

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Propagation.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure: Propagation. using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure: Propagation. using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Propagation.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure: Propagation.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure: Propagation.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 373 - FIREBREAKS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Firebreaks.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Creation of Firebreaks has caused extirpation of rare plant species including "Tecate cypress in the Guatay Mt. and Otay Mt. groves, another has eliminated several Cupressus abramsiana in the bonnie Doon grove, and Knobcone pines have been destroyed in the Santa Ana Mts." Terrestrial Vegetation of California, 1988, Barbour & Major

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Firebreaks.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 374 - RINGTAIL (BASSARISCUS ASTUTUS).

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on
Ringtail (Bassariscus astutus).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The Ringtail (Bassariscus astutus) is a fully protected species which
can inhabit the Monterey Pine native forest ecosystem. PB
Lot
Program-DEIR April 1994.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Ringtail (Bassariscus astutus).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 375 - RINGTAIL (BASSARISCUS ASTUTUS) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Ringtail (Bassariscus astutus) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Ringtail (Bassariscus astutus) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
 45. Please provide AVOIDANCE MITIGATION for this impact.
 46. Please provide the reverse of this impact as Mitigation.
 47. Please provide an ALTERNATIVE which avoids this impact.
 48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 376 - BEARS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Bears.
- If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.
- There are seven or eight species of bears, three in North America.
Tremarctos reached North America some 10 million years ago.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Bears.
- 1b. If no objective criteria are used please state that clearly.
 2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
 - 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
 - 3b. Please quote the definition used.
 4. If no measurement units are used please state that clearly.
 - 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
 - 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
 6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
 7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
 8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
 9. Please state the variance's MARGINS of ERROR or confidence level.
 10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 377 - CALIFORNIA BLACK BEAR.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on California Black Bear.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

California Department of Fish and Game biologist Bruce Elliot describes the Ventana Wilderness population of Black Bears as "casual and infrequent." "These are wild bears; rare and precious and in no way comparable to the black bears in popular Sierra camping areas." "They are not problem bears relocated from Yosemite" Sierra Club Ventana Newsletter, Nov 99 "Cubs have been spotted in the area of the north coast ridge road."

Black Bears occasionally walk into non-rural areas of Monterey County including Carmel (Killed May 24, 2001), Jeffer's Forest in Pebble Beach (May 24, 2001), Laguna Seca (May 20, 2001), Salinas (May 2001), Arroyo Seco, Hunter Liggett, Salinas Airport (1962), Soledad (1964), Fort Ord, Monterey (Aguajito Rd 1986?), Jeffers Forest in Pebble Beach (2 bear cubs) in 1994, Tassajara (1997), Higgins Creek in Ventana Wilderness (1998), Fort Ord and Sand City (May 1999), Via la Gitana (East of Carmel Valley Village, Aug 99), Tassajara Rd (May 99).

"About one bear a year is killed on Cuesta Grade on Highway 101 and one bear a year is spotted making its way along the riparian corridor of the Salinas River."

"For all mammals, the acuity of the sense of smell depends primarily upon the size of the 'olfactory mucosa,' a specialized area of mucous membrane located in the nose. In humans the olfactory mucosa normally totals less than a square inch in area. In the average bear, it may be one hundred times that much. Bears have been known to detect the odor of rotting carrion from as far away as ten miles." Bears, Their Life and Behaviour, Ashworth & Wolfe, Crown, 1992

This indicates that to a bear, an offensive smell will be far less intense than to a human.

Bears hearing appears to range well up into ultrasonic frequencies. Id.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Black Bear.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 378 - CALIFORNIA BLACK BEAR HABITAT.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on
California Black Bear Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
California Black Bear Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 379 - MOUNTAIN LIONS (FELIS CONCOLOR).

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on Mountain Lions (felis concolor).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species. Monterey County is well within the range of this species. They often walk into Carmel Valley. They occasionally walk into non-rural areas including Hatton Canyon (1980's), Pebble Beach and Pacific Grove (late 1970's), Rio Road in Carmel Sept 99, Pescadero Canyon in Pebble Beach Sept 99, Pescadero Canyon in Pebble Beach Dec 16 1999, Ocean Ave (downtown) Carmel, 4am Dec 16 1999.

"If you have deer in your area, you probably have mountain lions."
California Department of Fish and Game (CDF&G) Wildlife Biologist Terry Palmisano, Carmel Pine Cone Oct 1 1999.

Mountain Lions occasionally come through [Pescadero Canyon] while hunting. -Pebble Beach Forester, Paul Dubsky, Carmel Pine Cone 10/1/1999

"[Pebble Beach Forester Paul] Dubsky believes that there is still habitat available for the [mountain] lions in the Del Monte Forest, which allows them to stay a safe distance from people and residences."
-Carmel Pine Cone, Dec 24, 1999 front page.

"Last month, [Carmel gallery owner Dino] Orlando spotted a [mountain] lion crossing Highway 1, 100 yards north of the Carpenter exit."
"And in recent weeks, police received yet another report of a lion, chasing a raccoon by the Serra statue in Carmel Woods."
-Carmel Pine Cone, Dec 24, 1999 front page.

The Carpenter exit and Serra statue are both immediately adjacent to the wild Pescadero Canyon in Pebble Beach.

Two Mountain Lions were seen at Carmel Middle School parking lot about 10:45 pm by an employee Mar 28, 2000. Herald Apr 1 2000, pg b2

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Mountain Lions (felis concolor).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and

losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 380 - MOUNTAIN LIONS (FELIS CONCOLOR) HABITAT.

The Document appears to have ignored this potentially significant impact. Please carefully analyze and disclose the project's potential impacts on Mountain Lions (felis concolor) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Mountain Lions (felis concolor) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 381 - MONTEREY DUSKY-FOOTED WOODRATS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Monterey Dusky-Footed Woodrats.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

They are a CDFG Species of Special Concern & a Federal Candidate 2.
They occur in oak woodland and savanna habitats.
They are closely tied to their nests for escape cover and thermal protection.

"Numerous midden locations were observed throughout woodland and chaparral habitats. (Thelander personal Communication)"
Rancho San Carlos FEIR pg 11-47 1995

There was at least one residence in Pescadero Canyon in Pebble Beach
Lot program EIR.

This species has been documented near the Arroyo Seco Campground.(Forest Service ltr to FHWA Aug 9 1994)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Monterey Dusky-Footed Woodrats.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Monterey Ornate Shrews.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

Species of Special Concern & a Federal Candidate 2.
This species is known to inhabit Monterey County.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Monterey Ornate Shrews.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

* 383 - MONTEREY ORNATE SHREWS.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 389 - WOLVERINE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Wolverine.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Resembling a short-legged bear the wolverine is actually a member of the weasel family. It weighs 35-60 pounds and measures 35-45 inches long including its tail. It is very elusive and has a home range of several hundred square miles, making it difficult to study. Human disturbance and loss of habitat threaten its existence. It is California listed as threatened." California Department of Fish and Game

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Wolverine.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 390 - WOLVERINE HABITAT.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on
Wolverine Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Wolverine Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 391 - SOUTHERN SEA OTTER (ENHYDRA LUTRIS NEREIS).

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on
Southern Sea Otter (enhydra lutris nereis).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This species was federally protected under the Endangered Species Act as a Federally listed Threatened species in 1977. Its population numbers have dropped for 5 of the last 6 years since 1996.

It is also protected under the Marine Mammal Protection Act. The Marine Mammal Protection Act 1972, USC 16 establishes a moratorium on the taking ("harass, hunt, capture or kill") and importation of marine mammals and marine mammal products, with exceptions for scientific research, allowable incidental taking, exemptions for subsistence activities by Alaskan natives and hardship exemptions (16 U.S.C. 1371). It requires all private or public actions that intentionally take marine mammals to get a permit.

MMPA is administered by US-FWS to protect sea otters.

Monterey County is not only well within the range of this species, it contains almost the entire population. Monterey County coastal waters contain the largest concentration of the Southern Sea Otter . It lives in nearshore kelp beds out to the 100 meter depth contour and occurs from Ano Nuevo in Santa Cruz County to the north to approximately Pt. Conception in the south. There is a small (17 - 25 individuals) relocated to San Nicholas Island. It is a keystone species (Miller 98) that keeps sea urchins from depleting kelp beds. In May 99 the Sea otter population has dropped from 2377 to only 1937.

"As one of the few marine representatives of the order Carnivora, the sea otter evolved to inhabit a narrow ecological zone adapting to the near shore community and preferring a rocky shoreline with kelp beds." FWS, Draft Southern Sea Otter Recovery Plan June 1996

"Otters feed in both rocky and soft sediment nearshore areas, as well as in the kelp understory and canopy." US-Fish & Wildlife Service, "The Southern Sea Otter. Its Biology, Life Habits and History"

"Otters live in waters with temperatures between 35 and 60 degrees F." Ibid

Sea Otters use kelp beds for protection from predators including the great white shark.

Pesticide, fertilizer and non-point pollution runoff can harm the imperiled sea otter and its fragile habitat.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Southern Sea Otter (enhydra lutris nereis).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and

potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 392 - SOUTHERN SEA OTTER (ENHYDRA LUTRIS NEREIS) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Southern Sea Otter (enhydra lutris nereis) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Southern Sea Otter (enhydra lutris nereis) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 393 - GOLF COURSE WATER CUTBACK.

This Alternative does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

*** 394 - STORMWATER CAPTURE.**

This Water supply mitigation does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

*** 395 - CISTERN PROGRAM.**

Cisterns are water storage tanks generally ranging in size from 50 gallons (about \$110) to 1500 gallons (about \$500 to \$750). Cisterns typically collect and store rain runoff from a single house so it can be used for domestic purposes including toilet flushing, gardening, lawns, and emergency water supplies.

This Water supply mitigation does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute

amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 396 - DUAL PLUMBING FOR NEW CONSTRUCTION.

This Water supply mitigation does not require any non-off-the shelf technology

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each

criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 397 - ENFORCE LANDSCAPING WATER CUTBACK RULES.

This Water supply mitigation does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each

measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

* 398 - GENERAL WATER POLLUTION.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
General Water Pollution.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Worldwide at least 25,000 people die every day from their normal use of water. (WWF Atlas of Environment, 1990) (Between 5 and 12 million per year.)

"States report that about 40 percent of the waters they assessed do not meet water quality goals. About half of the nation's over 2,000 major watersheds have serious or moderate water quality problems."
-EPA Administrator, Carol Browner and Secretary, Dept. of Agriculture Dan Glickman Feb. 14th 1998 in letter to Vice President Al Gore.
The report "Clean Water Action Plan" continues "Despite tremendous progress, 40 percent of our nation's waterways assessed by states are still unsafe for fishing and swimming."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of General Water Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 399 - NON-POINT SOURCE WATER POLLUTION.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Non-Point Source Water Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Runoff washes large quantities of pollutants from rooftops, streets, and parking lots. Stormwater pollutants include nutrients, salt, oil, oxygen-consuming materials, and toxics such as copper, lead and zinc.

These contaminants come to rest on impervious surfaces by settling from the atmosphere; from car and truck operation; from fertilizers and pesticides applied to lawns; from corrosion of metal downspouts and gutters; and a host of other sources." The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

The Exxon Valdez spilled 11 million gallons of crude oil into Alaska's

Prince William Sound. Bilge Cleaning and other ship operations releases more than 12 times that amount.

Used engine oil from road runoff and oil changes is 33 times that - every year. "The amount of oil from an average oil change could kill fish in a million gallons of water." Sierra Magazine Mar/Apr 1999 pg 17 citing a National Research Council report.

"[D]ue to increased motor vehicle and pedestrian traffic and parking associated with project operation, increased quantities of urban pollutants such as heavy metals from exhaust, motor oil, grease and litter would enter the Bay through the outfall as stormwater contaminants creating potential biological disturbances in the intertidal and subtidal areas. Other urban pollutants generated at the site could include pesticides and fertilizers applied to project landscaping." DEIR, Cannery Row, Rohr Hotel, 1983

Please state all materials used in rooftops, streets, and parking lots which could potentially pollute runoff water.

"Oil is composed of thousands of compounds, including polynuclear aromatic hydrocarbons, or PAHs. PAHs are not regulated in the aggregate nor for their impact on aquatic life. The EPA issues water-quality recommendations only for human consumption of specific PAHs-such as naphthalene and chrysene-although states can devise their own regulations."

"... Heinz (US-National Marine Fisheries Service biologist in Juneau) and his colleagues have determined that PAH levels as low as 1 ppb harm both pink salmon and Pacific herring. In their most recent studies which appear in this month's Environmental Toxicology and Chemistry, the scientists found that mortality increased for both species of fish exposed to 1 ppb. And they discovered that the effects of very weathered oil were the same as those of fresh oil..." Scientific American March 1999 pg 38

Hazardous waste is increasingly expensive to dispose of and in some cases is illegal to manufacture. Some unscrupulous people drive trucks in rainstorms and let the hazardous and prohibited waste leak undetected onto highways.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Non-Point Source Water Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 400 - WATER POLLUTION CAUSING WATER QUANTITY LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Pollution Causing Water Quantity loss.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

"Lake Tahoe's South shore has lost some 20 percent of its drinking water supply to MTBE." Associated Press April 11 1999

The water supply for Chualar, California was so polluted with nitrates water trucks were needed to supply the community with all potable water for at least 3 years.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Water Pollution Causing Water Quantity loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 401 - PUBLIC TRUST WATER QUALITY LOSS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Public Trust Water Quality Loss.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

For example: Acidity
"In lakes and waterways all life ceases when the pH value falls below
about 4. Many lakes in Scandinavia are already devoid of all organic
life." Earth Book Atlas 1987, pg 24 ISBN 0-87746-100-7

The mortality level for Rainbow trout (genetically identical to the ESA
listed West Coast Steelhead (*Oncorhynchus mykiss*) is a pH of 6.56.

The mortality level for Brown trout is a pH of 6.27.

The mortality level for Yellow Perch a pH of 4.43.
Janice, Harvey, Acid Rain in the East: The Problem and the Polluters
(Fredericton, New Brunswick: New Brunswick Conservation Council 1988)

Grease Traps

"State of the art oil and grease traps, if properly maintained, only

reduce pollution by 80%." Department of Fish & Game letter May 21, 1997
to City of Capitola on Capitola Crossing Project.
How many Grease Traps will be used?
What is the volume of kitchen/cooking grease generated per year?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Public Trust Water Quality Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 402 - NON-POINT SOURCE WATER POLLUTION IMPACTS ON EACH LISTED SPECIES.**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of

Non-Point Source Water Pollution impacts on each listed species.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Non-Point Source Water Pollution impacts on each listed species.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 403 - NON-POINT SOURCE WATER POLLUTION IMPACTS ON STEELHEAD.**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of

Non-Point Source Water Pollution impacts on Steelhead.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Non-Point Source Water Pollution impacts on Steelhead.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

-

* 406 - WATER POLLUTION CONCENTRATION DURING SUMMER AND DROUGHTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Pollution Concentration during Summer and Droughts.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Dissolved pollutants (as opposed to suspended pollutants) concentrate as
water flow decreases during rain free summer months and drought conditions.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Water Pollution Concentration during Summer and Droughts.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 407 - SWIMMING POOL WATER DUMPING POLLUTION.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Swimming Pool Water Dumping Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Swimming Pool Chlorine, when drained, can pollute sewer systems or groundwater. Chlorine is toxic to aquatic life and can create a sterile environment.

Chlorine was detected in Monterey at 0.2 ppm in a Del Monte Center drainage by the Urban Watch program in 2000 administered by the Monterey Bay National Marine Sanctuary.

Chlorine was detected in Pacific Grove at Lover's Point, Asilomar, Greenwood Park, at up to 2 ppm by the Urban Watch program in 2000 administered by the Monterey Bay National Marine Sanctuary.

Level of concern for Endangered Species Act listed species is -

Aquatic Invertebrates = 0.85 ppBillion
Freshwater Fish = 2.3 ppB
Estuarine Invertebrates = 1.3 ppB

Level of concern for unlisted species is -
Aquatic Invertebrates = 0.009 ppm
Freshwater Fish = .023 ppm

EPA's Office of Drinking water established an MRDL of 4 mg / Liter
as an enforceable standard.

Chlorine's odor threshold is 0.01 ppm
NIOSH sets a maximum air pollution threshold of 0.5 ppm for 15 mins maximum.
Chlorine gas at 1000 ppm is normally fatal even if only for a few moments.

Chlorine can be inexpensively tested with an DPD Octa-Slide Comparator against color standard. Accuracy is +/- 10 percent. (LaMotte Company monitoring kit)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Swimming Pool Water Dumping Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 408 - PESTICIDES IN RUNOFF.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Pesticides in Runoff.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"DDT is being preserved in soils all over California." DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is on the US EPA's CWA 303(d) list for Pesticide contamination exceeding TMDL limits. The pesticides come from Agriculture, Irrigated Crop production, Agriculture-storm runoff, Agriculture-irrigation tailwater, Agriculture Return flows, and non-point source pollution.

"DDT has been found in moderate to high concentrations in the Salinas River and lower Moss Landing watershed for many years." DDT in the

Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

"The 3,800 ppb measurement at the 'pump station east' [draining into the Salinas River] is the highest ever found in a shellfish by the State Mussel Watch. As DDT and its by-products are lipid soluble, the lipid-based measure of 754,000 ppb is even more noteworthy." Id.

Monterey County used over 10 million pounds of pesticides in 1995 according to the Calif. Dept. of Pesticide Regulation. Some 428 cases of pesticide poisoning were reported to public officials in Monterey County during a six year period. 50 cases of pesticide poisoning were reported in Monterey County in 1996.

"The term 'safety factor' suggests perhaps inadvertently, the notion of absolute safety (i.e. absence of risk). While there is a conceptual basis for believing in the existence of a threshold and 'absolute safety' associated with certain chemicals, in the majority of cases a firm experimental basis for this notion does not exist." US-EPA, Reference Doses: Description and use in Health Risk Assessments March 15 1993

This means that "in a majority of cases" no chemical use can be considered either "hazard of risk free" or "absolutely safe." For a majority of chemicals there is a health hazard & risk in using them.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pesticides in Runoff.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 409 - EUTROPHICATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Eutrophication.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Eutrophication is the excessive growth of aquatic plants.

Eutrophication leads to oxygen deficiency which has killed significant numbers of fin fish and shellfish in the Chesapeake Bay, Long Island

Sound, the Black Sea, the Baltic Sea, and elsewhere.

Nitrogen fixation means making nitrogen biologically consumable by plants as food. Until 1940, human commercial activities fixed almost zero nitrogen. A study in 1990 found that half of all the nitrogen ever fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: "...it represents perhaps the greatest threat to the integrity of coastal ecosystems," RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Eutrophication.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 410 - WATER BODY LOSS DUE TO POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Body Loss Due to Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Water Body Loss Due to Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 411 - OZONE SEWAGE TREATMENT.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Ozone Sewage Treatment.

Pacifica, Ca opened its \$50 million UV sewage treatment plant Sept 10, 2000 It uses no chlorine.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 412 - EXCESSIVE NUTRIENT LOADINGS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Excessive Nutrient Loadings.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Nitrogen and Phosphorus are the biggest overall sources of our nation's rivers impairment.

Nitrogen fixation means making nitrogen biologically consumable by plants as food. Until 1940, human commercial activities fixed almost zero nitrogen. A study in 1990 found that half of all the nitrogen ever fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: "...it represents perhaps the greatest

threat to the integrity of coastal ecosystems," RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

"Excessive Nutrient loadings will result in excessive growth of macrophytes or phytoplankton and potentially harmful algal blooms (HAB), leading to oxygen declines, imbalance of aquatic species, public health risks, and a general decline of the aquatic resource." -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore.

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is in the US EPA's CWA 303(d) list for Nutrient contamination exceeding TMDL limits.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Excessive Nutrient Loadings.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 413 - NITRITE (NOT NITRATE) CONTAMINATION OF DRINKING WATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Nitrite (not Nitrate) Contamination of Drinking Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Oregon State University researchers "have named the nitrogen based compounds found in fertilizers as likely suspects in the rapid decline of at least one frog species in the Pacific Northwest."

The maximum recommended nitrite limit for drinking water, 1 milligram per liter, was sufficient to kill well over half of the Oregon spotted frog tadpoles and about half of the northwestern salamander tadpoles.

Nitrate compounds can be readily converted to nitrites through a number of environmental processes including bacteria.

Nitrogen fixation means making nitrogen biologically consumable by plants as food. Until 1940, human commercial activities fixed almost zero nitrogen. A study in 1990 found that half of all the nitrogen ever

fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: "...it represents perhaps the greatest threat to the integrity of coastal ecosystems," RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Nitrite (not Nitrate) Contamination of Drinking Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criterion and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that

number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 414 - NITRATE CONTAMINATION OF SURFACE WATER.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Nitrate Contamination of Surface Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Excessive Nitrate levels can cause abundant algal growths and can threaten human health at a concentration of 10 mg/l N or greater.

-Richard D. Klein, Protecting the Aquatic Environment from the Effects of Golf Courses. Oct 1993

Nitrogen fixation means making nitrogen biologically consumable by plants as food. Until 1940, human commercial activities fixed almost zero nitrogen. A study in 1990 found that half of all the nitrogen ever fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: "...it represents perhaps the greatest threat to the integrity of coastal ecosystems," RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is in the US EPA's CWA 303(d) list for Nutrient contamination exceeding TMDL limits.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Nitrate Contamination of Surface Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 415 - AMMONIA CONTAMINATION OF SURFACE WATER.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Ammonia Contamination of Surface Water.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

"Ammonia is extremely toxic to aquatic life. Generally ammonia will pose the greatest threat to aquatic life when transported by stormwater to surface waterways." -Richard D. Klein, Protecting the Aquatic Environment from the Effects of Golf Courses. Oct 1993

Labware Direct (1 800 356 0783) sells Ammonia detection systems measuring concentrations as low as 0.01 ppm.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Ammonia Contamination of Surface Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 416 - NITRATE CONTAMINATION OF GROUND WATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Nitrate Contamination of Ground Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Fertilizer Nitrates are polluting groundwater aquifers.

In a EPA survey reported in the July 29 1991 US News and World Report
nitrate showed up in more than half the drinking water wells tested
across the country.

"A 1984 survey carried out by the US-EPA showed that, out of 124,000
wells sampled, 24,000 had elevated levels of nitrates and 8,000 were

polluted above natural health limits." WWF, 1990

It can take decades for nitrates to percolate down into groundwater,
so the problem will worsen as the increased amounts of fertilizer
applied today reaches groundwater.

Nitrogen fixation means making nitrogen biologically consumable by
plants as food. Until 1940, human commercial activities fixed almost
zero nitrogen. A study in 1990 found that half of all the nitrogen ever
fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication
of estuaries and coastal seas: "...it represents perhaps the greatest
threat to the integrity of coastal ecosystems," RACHEL'S ENVIRONMENT
& HEALTH WEEKLY #557, July 31, 1997

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Nitrate Contamination of Ground Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically testable, repeatable,
falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows
whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is
measured or assumed.

25. Please state whether this total PERCENT maximum
change is an AVERAGE amount, a worst case expected or a
best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to
which the impact would raise or lower the baseline number
and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is
measured or assumed.

28. Please state whether this total maximum change amount
is an AVERAGE amount, a worst case expected or a best
case expected.

29. Please list all potential CUMULATIVE impacts related to
this one.

30 Please describe all potential CUMULATIVE impacts
related to this one.

31. Please quantify all potential CUMULATIVE impacts
related to this one.

32. Please list, describe and quantify all potential compound
and synergetic impacts.

33. Please list, describe and quantify all Construction
impacts related to this one.

34. Please list, describe and quantify all Growth impacts
related to this one.

35. Please list, describe and quantify all Indirect impacts
related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 419 - PHOSPHORUS CONTAMINATION OF DRINKING WATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Phosphorus Contamination of Drinking Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Phosphorus Contamination of Drinking Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 420 - ALUMINUM SULFATE.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Aluminum Sulfate.

Aluminum Sulfate is sometimes added to surface waters to reduce Phosphorus pollution and prevent algae growth.

* 421 - PESTICIDES IN SURFACE WATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Pesticides in Surface Water.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The 1998 U.S. National Water Quality Assessment (NWQA) Program found pesticide contamination in all of its river and stream samples. "Fatal Harvest" pg 232

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pesticides in Surface Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
- * 422 - PESTICIDES IN GROUNDWATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Pesticides in Groundwater.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Some pesticides readily infiltrate soils, particularly sandy soils, and eventually acculate in the groundwater. In 1989, the [US] EPA detected pesticides in the groundwater of twenty-six states."
Environmental Science; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993 p 179

"The U.S. spends \$1,300,000,000.00 annually to monitor groundwater for pesticides." Ibid

Once contaminated groundwater is extremely difficult to clean up.
"Groundwater Contamination in the U.S.", R. Patrick et al 1987, U of Pennsylvania

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
- Pesticides in Groundwater.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 423 - TRICHLOROETHYLENE IN DRINKING WATER (TCE).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Trichloroethylene in Drinking Water (TCE).

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

On April 13th 1999, Monterey County Board of Supervisors voted unanimously for an emergency ban on new water wells for the Northern Fort Ord area near Marina because of the Trichloroethylene pollution.

Federal and California water standards mandate no more than 15 ppBillion.

The US Public Health Service estimated that "between 9 and 34% of water supply sources in the US may be contaminated with Trichloroethylene."
Trichloroethylene in Drinking Water causes myelocytic leukemia.
Trichloroethylene is used to degrease metal parts.
Symptoms include; dizziness, nausea, vomiting, fatigue, skin rashes and cardiac arrhythmia. It impairs short term memory, attention span and ability to think sequentially. It causes permanent neurological deficit after a single exposure.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Trichloroethylene in Drinking Water (TCE).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 424 - ORGANOPHOSPHORUS PESTICIDE COMPOUNDS IN DRINKING WATER.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Organophosphorus Pesticide Compounds in Drinking Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Organophosphorus pesticide compounds include Diazinon and Malathion and are nerve agents originally developed in Nazi Germany in the 1930s.
Because Organophosphorus pesticides are now widely used on food crops they were the first family of compounds to be evaluated under the 1996 FQPA.

According to Mark Miller, M.D. MPH a member of the Environmental Health Committee of the American Academy of Pediatrics (quoted in Coast Weekly April 22 1999) - even low level exposure to Organophosphorus pesticide compounds (e.g. diazinon, cypermethrin, Chlorpyrifos, hydramethlynon, propetamphos and Malathion) may cause symptoms. "The effects of organophosphates are cumulative so that if the chemical used in the home and in food is added to those used on school grounds, something may tip the bucket."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Organophosphorus Pesticide Compounds in Drinking Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 425 - WATER POLLUTION-BASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Pollution-Base.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Water Pollution-Base.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 426 - WATER POLLUTION-ACIDITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Pollution-Acidity.

If you claim the document contains proof of no-significant-
impact for
this impact please explicitly state the page number and
paragraph.

When water becomes too acidic it interferes with fish and
aquatic life.

"In lakes and waterways all life ceases when the pH value
falls below
about 4. Many lakes in Scandinavia are already devoid of all
organic
life." Earth Book Atlas 1987, pg 24 ISBN 0-87746-100-7

The mortality level for Rainbow trout (genetically identical to
the ESA
listed West Coast Steelhead (*Oncorhynchus mykiss*) is a pH of 6.56.
The mortality level for Brown trout is a pH of 6.27.
The mortality level for Yellow Perch a pH of 4.43.
Janice, Harvey, Acid Rain in the East: The Problem and the
Polluters
(Fredericton, New Brunswick: New Brunswick Conservation
Council 1988)

Water pH can be changed by and are an indication to look
for sewer
overflows, pesticides, fertilizers, dust in the air, and mineral
substances.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
Water Pollution-Acidity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows
whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is
measured or assumed.

25. Please state whether this total PERCENT maximum
change is an AVERAGE amount, a worst case expected or a
best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to
which the impact would raise or lower the baseline number
and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is
measured or assumed.

28. Please state whether this total maximum change amount
is an AVERAGE amount, a worst case expected or a best
case expected.

29. Please list all potential CUMULATIVE impacts related to
this one.

30 Please describe all potential CUMULATIVE impacts
related to this one.

31. Please quantify all potential CUMULATIVE impacts
related to this one.

32. Please list, describe and quantify all potential compound
and synergetic impacts.

33. Please list, describe and quantify all Construction
impacts related to this one.

34. Please list, describe and quantify all Growth impacts
related to this one.

35. Please list, describe and quantify all Indirect impacts
related to this one.

36. Please list and quantify every OTHER IMPACT - this
impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the
RESOURCE this impact affects.

38. Please state the METHOD of measurement used to
determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence
level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or
assumed.

41. Please quantify what is the maximum amount (in
AMOUNT of existing) of this resource that can be lost and
still be restored.

42. Please quantify what is the MAXIMUM amount (in
PERCENTAGE of existing) of this resource that can be
LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed
this impact.

44. Please cite each expert's training, and peer reviewed,
validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this
impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this
impact.

48. Please list all other studies initiated by the applicant
related to this impact, including subject matter breadth,
author's names and dates and where they
can be examined.

* 427 - WATER POLLUTION-CHLORDANE.

The Document appears to have ignored this potentially
significant Impact.
Please carefully analyze and disclose the potential impacts
of
Water Pollution-Chlordane.

If you claim the document contains proof of no-significant-
impact for
this impact please explicitly state the page number and
paragraph.

In 1996 2,193 fish consumption advisories were issued in 48
states.
Mercury, PCBs, chlordane, dioxin and DDT were responsible
for almost all
fish consumption advisories in 1996. -EPA Administrator,
Carol Browner
and Secretary, Dept of Agriculture Dan Glickman Feb 14th
1998 in Report

called the "Clean Water Action Plan" to Vice President Al Gore.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Pollution-Chlordane.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 428 - WATER POLLUTION-DDT.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Water Pollution-DDT.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Recently the US-EPA found DDT in 99% of the freshwater fish it tested."
(Living in the Environment, 1998, pg 625)

In 1996 2,193 fish consumption advisories were issued in 48 states.
Mercury, PCBs, chlordane, dioxin and DDT were responsible for almost all fish consumption advisories in 1996. -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore.
Up to 15% of a pesticide can be DDT which is still allowed by EPA and FIFRA as an "impurity" in insecticides including chlorobenilate and dicofol. (Living in the Environment pg 627)

Some 1 billion kilograms of DDT were spread into the natural environment prior to 1972.

"DDT is being preserved in soils all over California." DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is on the US EPA's CWA 303(d) list for Pesticide contamination exceeding TMDL limits. The pesticides come from Agriculture, Irrigated Crop production, Agriculture-storm runoff, Agriculture-irrigation tailwater, Agriculture Return flows, and non-point source pollution.

"DDT has been found in moderate to high concentrations in the Salinas

River and lower Moss Landing watershed for many years." DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

DDT is a chlorinated hydrocarbon. Above 1000 ppm a chlorinated hydrocarbon fluid is a hazardous waste (EPA 40 CFR 261 regs)

Labware Direct (1 800 356 0783) sells chlorinated hydrocarbon detection systems measuring concentrations as low as 200 ppm.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Pollution-DDT.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 429 - WATER POLLUTION-THE OTHER TOP 20 HAZARDOUS SUBSTANCES.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Water Pollution-the Other Top 20 Hazardous Substances.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

From ATSDR - ATSDR/EPA Top 20 Hazardous Substances 1995
Agency for Toxic Substances and Disease Registry
This annual evaluation activity fulfills the conditions of CERCLA section 104 (i), as amended, which requires ATSDR and EPA to revise the priority list of hazardous substances (N=275) periodically to include additional hazardous substances.

Each chemical is identified with a Rank Number and includes an ATSDR Public Health Statement.

The Public Health Statements were prepared by the ATSDR Division of Toxicology. They provide general information on the properties of the chemical and answer many health concerns that are voiced by community groups. A full list of the ATSDR Toxicologic Profiles and Public Health Statements can be accessed through the ATSDR HazDat.

The full priority list of hazardous substances (N=275) for 1995 can be accessed HERE!

Top 20 Hazardous Substances:

Lead Arsenic
Mercury, Metallic Vinyl Chloride
Benzene Polychlorinated Biphenyls (PCBs)

Cadmium Benzo(a)pyrene
 Chloroform Benzo(b)fluoranthene
 DDT,P'P'- Aroclor 1260
 Trichloroethylene Aroclor 1254
 Chromium(+6) Chlordane
 Dibenzo[a,h]anthracene Hexachlorobutadiene
 DDD,P'P'- Dieldrin

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Pollution-the Other Top 20 Hazardous Substances.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 430 - WATER POLLUTION-OIL IN GENERAL.

The Document appears to have ignored this potentially significant Impact.
 Please carefully analyze and disclose the potential impacts of Water Pollution-Oil in General.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Human activity puts ten times as much oil in the oceans as comes from natural seeps." Beytrayal of Science and Reason, Erlich, 1996

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Pollution-Oil in General.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 431 - LAND BASED OIL LEAKAGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Land Based Oil Leakage.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Since the Exxon Valdez spill, at least 10,000 spills have occurred in

the United States, dumping 15 to 20 million gallons of oil. Victims are tens of thousands of birds, mollusks, aquatic vegetation, as well as salt marshes, swamps, and coastal ecosystems. Oil spills occur on land when pipelines leak or break. Oil is difficult to remove from soil, and it leaches into nearby creeks and lakes. Oil contaminated water is unfit for use." Audubon's 1994 Almanac on the Environment

The town of Avila Beach California was essentially abandoned due to millions of gallons of oil leaking into the groundwater aquifer over many decades.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Land Based Oil Leakage.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 432 - LAND BASED OIL SPILLS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Land Based Oil Spills.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"A tanker truck plunged off a mountain road, killing the driver and spewing as much as 4,000 gallons of crude oil into a Ventura County creek ." Monterey Herald March 1, 2000

"A tanker truck carrying 7,500 gallons of diesel fuel overturned Wednesday near Chualar, spilling 1,800 gallons onto the highway and shoulder and slowing southbound traffic for hours." Herald B2, Jun 1,00

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Land Based Oil Spills.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 433 - USED ENGINE OIL FROM ROAD RUNOFF AND OIL CHANGES.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Used Engine Oil from Road Runoff and Oil Changes.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

The Exxon Valdez spilled 11 million gallons of crude oil into Alaska's Prince William Sound. Used engine oil from road runoff and oil changes is 33 times that - every year. "The amount of oil from an average oil change could kill fish in a million gallons of water." Sierra Magazine Mar/Apr 1999 pg 17 citing a National Research Council report.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Used Engine Oil from Road Runoff and Oil Changes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 434 - OIL IN ASPHALT PAVEMENT CAUSING WATER AND AIR POLLUTION.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of

Oil in Asphalt Pavement Causing Water and Air Pollution.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Oil from asphalt pavement causes continuous long term air and water pollution. This is distinct from the air and water pollution caused by construction or paving. (Pavement vs Paving)

Crude oil is the second largest component of asphalt, composing at least 5 percent and up to 7 percent of the mass of the pavement (*1). Thus every ton of new paving asphalt contains at least 100 pounds, and possibly 140 pounds, of crude oil. Since the oil is not sealed in, it evaporates and becomes air pollution, or it is washed off in rains and fog to become water pollution. Even in relatively tiny amounts, these forms of oil (hydrocarbon) water and air pollution can sicken and kill

plants and animals.

"Oil is composed of thousands of compounds, including polynuclear aromatic hydrocarbons, or PAHs. PAHs are not regulated in the aggregate nor for their impact on aquatic life. The EPA issues water-quality recommendations only for human consumption of specific PAHs-such as naphthene and chrysene-although states can devise their own regulations."

"... Heinz (US-National Marine Fisheries Service biologist in Juneau) and his colleagues have determined that PAH levels as low as 1 ppb harm both pink salmon and Pacific herring. In their most recent studies which appear in this month's Environmental Toxicology and Chemistry, the scientists found that mortality increased for both species of fish exposed to 1 ppb. And they discovered that the effects of very weathered oil were the same as those of fresh oil..." Scientific American March 1999 pg 38

The hydrocarbons in asphalt can cause direct harm to many species of aquatic and terrestrial life including killing salmonid eggs and alevins. See *2, *3.

Asphalt hydrocarbons could potentially be a hazardous waste under California's Hazardous Waste regulations as the threshold is an LC50 of 500 mg/liter. California Department of Fish and Game found significant mortality (up to 60%) at only 1000 mg/liter after only 96 hours. No margin of error was determined. See *3.

It is possible that asphalt's toxin release could increase to cause the LC50 to drop under 500 mg/liter with small variances in testing duration, asphalt age, sunlight exposure, stream temperature, stream water flow, stream acidity, and surface area of asphalt exposed to the surface water. See *3.

California Fish & Game Code 5650 Prohibits Polluting waters with any substance or material deleterious to fish, plant life, or bird life. Prohibits placement of any petroleum product into a place where the product can pass into the waters of the state.

The US blacktops some 1.3 million acres every year. This is equal in area to the state of Delaware. (David Pimental, panelist, "Carrying Capacity Network" conference, Washington DC, 1993)

According to the California Integrated Waste Management Board one lane mile 4 inches thick of conventional asphalt concrete needs 1,584 tons of material. The components include about 3 million pounds of crushed rock and 175 thousand pounds of asphalt cement.

1) Please identify the total number of lane miles the project will create or maintain both directly and indirectly.

1a) Please identify the total number of acres (include parking lots) of asphalt the project will create both directly and indirectly.

2) Please identify the percentage of oil, by mass, the asphalt will contain.

3) Please identify the number of tons of asphalt used per lane-mile for the project.

3a) Please identify the number of tons of asphalt used per acre.

4) Please identify the total amount of asphalt (in tons) the project will require.

5) Please identify the total mass amount of oil contained in the asphalt proposed for all paving related to the project including for all mitigations.

6) Please analyze the amount and form of oil that will evaporate and become air pollution per year - and for the cumulative lifespan of the asphalt.

7) Please analyze the amount and form of oil that will evaporate hourly and become air pollution during typical hot summer days.

8) Please analyze the amount and form of oil that will runoff and become water pollution per year for the cumulative lifespan of the asphalt.

9) Please analyze the yearly environmental impacts due to the oil's evaporation - and for the cumulative lifespan of the asphalt.

10) Please analyze the yearly environmental impacts due to the oil's runoff into surface waters - and for the lifespan of the asphalt.

11) Please analyze the runoff oil's impacts (and cumulative impacts) on the rare and endangered species - especially reproductive harm to fish, amphibians, birds, trees and plants.

12) Please analyze the runoff oil's impacts when combined with pesticides on the rare and endangered species - especially the fish, amphibians, birds, trees and plants.

13) Please analyze using concrete to mitigate the impacts of the asphalt.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Oil in Asphalt Pavement Causing Water and Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 435 - RUBBERIZED ASPHALT CONCRETE.

The Document appears to have ignored this potentially feasible Alternative.

Please carefully analyze and disclose the potential benefits of Rubberized Asphalt Concrete.

Rubberized Asphalt Concrete has greater strength and durability than conventional asphalt concrete even when only applied half as thick.

According to the California Integrated Waste Management Board one lane mile 4 inches thick of Rubberized asphalt concrete needs only 7,504 tons of material. The components include about 1.4 million pounds of crushed rock, 100 thousand pounds of asphalt cement and 25 thousand pounds of crumb rubber from shredded tires.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.	L1. It is important to know the cost to benefit ratio, please explain that ratio.	E2. Please state the extreme conditions which will be encountered.
D. Please state the existing or current baseline measurement (level) for each criteria.	M. EXPERT QUALIFICATIONS Please name each expert who prepared and reviewed this Alternative analysis.	F. Please provide a graph of historical measurement.
E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.	M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.	G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.
E1. If an average is used, please state which kind of average.	-	H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.
E2. Please state the extreme conditions which will be encountered.	* 436 - CONCRETE ROADWAYS.	H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.
F. Please provide a graph of historical measurement.	The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of Concrete Roadways.	H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;
G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.	Concrete as hard surface does not contain or release oil pollution, but it still increases the impervious surface area.	H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.
H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.	This Alternative does not require any non-off-the shelf technology.	I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.
H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.	ALTERNATIVE FACTUAL ANALYSIS There is little or no factual evidence in the document showing why this alternative is infeasible.	I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.
H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;	A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.	I2. If no margin of error is used please state that clearly.
H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.	A1. If no objective criteria are used please state that clearly.	J. ALTERNATIVE VALUE PROOF Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.
I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.	A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.	J1. Please discuss the limitations of those studies.
I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.	B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.	BENEFIT DURATION K. Please clearly describe how the benefits vary over the time during the studies.
I2. If no margin of error is used please state that clearly.	B1. If no measurement units are used please state that clearly.	K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.
J. ALTERNATIVE VALUE PROOF Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.	C. Please state the method of measurement used to determine the value for each criteria.	COSTS L. Please cite the costs for the Alternatives studied.
J1. Please discuss the limitations of those studies.	C1. If no measurement units are used please state that clearly for each criteria.	L1. It is important to know the cost to benefit ratio, please explain that ratio.
BENEFIT DURATION K. Please clearly describe how the benefits vary over the time during the studies.	C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.	M. EXPERT QUALIFICATIONS Please name each expert who prepared and reviewed this Alternative analysis.
K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.	D. Please state the existing or current baseline measurement (level) for each criteria.	M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.
COSTS L. Please cite the costs for the Alternatives studied.	E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.	-
	E1. If an average is used, please state which kind of average.	* 437 - DIRT ROADWAY.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Dirt Roadway.

Dirt Roadways do not contain petroleum containing asphalts and thus do not contaminate strewwams with oils.
Dirt Roadways do not crack and heave as do asphalt roads.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 438 - CHEMICAL SPILLS FROM TRUCKS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Chemical Spills from Trucks.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"A tanker truck plunged off a mountain road, killing the driver and spewing as much as 4,000 gallons of crude oil into a Ventura County creek ." Monterey Herald March 1 2000

This kind of spill can just as easily happen to trucks carrying hazardous chemicals.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Chemical Spills from Trucks.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 439 - CHEMICAL ACCIDENTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Chemical Accidents.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Chemical accidents with severe environmental and human impacts occur regularly - an average of 20 times per day - in the US."
"At least 41 million Americans live in a zip code that contains manufacturing companies whose vulnerable zone - the geographic area affected by the worst possible accident at the facility - extends more than three miles from the site."
California is among the top ten states for worst-case accident disaster potential.
National Environmental Law Center Report Spring 1999

"No complete record exists of chemical accidents, but the EPA's
Emergency Response Notification System logged almost 40,000 accident reports in 1994, or more than 100 calls each day. Some 1,000 of these reports involved deaths or injuries. Many accidents contaminate water or land. An estimated 15 U.S. accidents in the 1980s exceeded in volume and toxicity the Methyl Isocyanate chemicals released from Union Carbide at Bhopal, India, in the world's worst chemical accident, which killed 4,007 people immediately and injured some 200,000."

"Du Pont stores immense amounts of chemicals - reaching millions of pounds. By comparison, in 1988, a release of just 30,000 pounds of hydrofluoric acid from Marathon Oil in Texas City, Texas, defoliated trees, caused evacuation, and lead 1,000 people to seek medial help.
Only luck saved Texas City from a larger release. In 1993, just 8,000 pounds of sulfur trioxide from General Chemical in Richmond, Calif., sent a 15-mile ground level plume through the community and caused some 20,000 concerned people to contact local hospitals."

"The analysis of Du Pont's hazards addresses three chemicals commonly associated with chemical accidents - chlorine, ammonia, and hydrofluoric acid - at ten facilities."

The following are available upon request or from <http://www.rtk.net/wcs>.

- 1) Accidental Release Vulnerability Zones for Ten Du Pont Facilities
- 2) Top 50 U.S. Manufacturing Facilities in Worst-case Disaster Potential
- 3) Chemical Hazards and Danger Levels for Three Common Chemicals
- 4) Fact Sheet: Ten Reasons for a National, Public Data System for Risk Management Plans
- 5) Open Letter: 150 Organizations Support Right-to-Know
- 6) Fact Sheet: Seven Federal Databases Track Chemical Accidents

RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Chemical Accidents.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 440 - COLIFORM BACTERIA.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Coliform Bacteria.
- If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
- While Coliform bacteria (Enterotoxigenic E coli O157) can be a pathogen on its own, normally it is used as an indicator of contamination by untreated feces of humans or other animals since it is normally present in intestinal tracts of humans and animals.
- In 1994-1995 over 24 million (24,719,235) Americans were supplied with tap water that failed to meet basic health standards. Some 12,246 water delivery systems reported violations of federal Chronic Coliform Bacteria standards.
- The National Technical Advisory Committee on Water Quality Criteria set a bacteriological limit for primary water contact recreation waters during which ingestion occurs: Swimming, surfing and wading.
The limit set is in terms of fecal coliforms. In a minimum of 5 samples
- in 30 days, the fecal coliforms shall not exceed a logarithmic mean of 200/100 ml (for recreational waters), nor shall more than 10 percent of those total samples in 30 days exceed 400/100 ml. (Environmental Protection, McGraw-Hill, 1979)
- In 1993 four people died and 700 were sickened in Washington state after eating at Jack in the Box restaurants.
In Sept. 99 two people died and 600 were sickened by E. Coli in New York state while attending a county fair; also in Sept. 99 in Petersburg Illinois 18 people were hospitalized of a total of 140 people sickened with E. Coli after partying in a cow pasture.
- In 2000 in Walkerton Ontario five people died from an E. Coli outbreak in the drinking water system. More are expected to die. Up to 56 people per day were visiting hospitals complaining of e. coli symptoms.
AP May 29, 00
- Monterey County Health Dept Director Melton said "most Californians realize the shouldn't drink from any surface water in rivers or lakes because of widespread contamination by Salmonella, E-coli bacteria (from leaking septic tanks) and the parasite called Giardia, which comes from the droppings of coyotes, foxes, marmots and beavers."
-Carmel Pine Cone Sept 19 1997
- Cal-Am measured three times the allowed number of exceedances of Coliform Bacteria in 1998 (1.75 measured v. 0.5 allowed).
- What coliform standards and limits are used to determine this impact?
- Moss Landing's water supply had health risking levels of coliform in Sept 2000.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Coliform Bacteria.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 441 - WATER BORNE HEPATITIS & POLIO VIRUSES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Borne Hepatitis & Polio Viruses.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The Southern California Coastal Water Research Project states in January 1999 that "measurements for viruses found in the human digestive system have been taken, primarily at storm drain sites, along a 300 mile stretch of the California Coastline. Those viruses have been detected more than 50 percent of the time after heavy rains and are even detected in summer when only a trickle of water is coming through the storm drain."

During every Carmel River flood in the 1990's Monterey County Dept. of Environmental Health has issued a "No-Contact" warning due to excessive nitrate contamination of the river due to Carmel Valley septic systems.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Borne Hepatitis & Polio Viruses.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 442 - ALGAL BLOOMS INCLUDING PFISTERIA.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Algal Blooms including Pfisteria.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Excessive Nutrient loadings will result in excessive growth of macrophytes or phytoplankton and potentially harmful algal blooms (HAB), leading to oxygen declines, imbalance of aquatic species, public health risks, and a general decline of the aquatic resource." -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore.

"Nitrogen-fed algae blooms have been identified as the source of a major outbreak of cholera in South America in 1991. The algae harbor the cholera-causing bacterium. In 1991, 500,000 people fell ill and 5000 died when cholera erupted along the coastline of Peru and quickly spread to 18 other countries.[8]"

"The nitrogen content of the Mississippi River has more than doubled

since 1965, and nitrate concentrations in the major rivers of the northeastern U.S. have increased 3-to 10-fold since 1900, according to the ESA report. The same is true of European rivers. Nitrogen from rivers is now reaching the Atlantic Ocean at rates 2 to 20 times as great as during pre-industrial times. Around the North Sea, the increase has been 6-to 20-fold."

Nitrogen fixation means making nitrogen biologically consumable by plants as food. Until 1940, human commercial activities fixed almost zero nitrogen. A study in 1990 found that half of all the nitrogen ever fixed by industrial processes occurred after 1980.

Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: "...it represents perhaps the greatest threat to the integrity of coastal ecosystems,"

"Nitrogen entering the oceans is causing fertilization and eutrophication of estuaries and coastal seas: '...it represents perhaps the greatest threat to the integrity of coastal ecosystems,' says the ESA report. Eutrophication is the excessive growth of plants, leading to oxygen deficiency which has killed significant numbers of fin fish and shellfish in the Chesapeake Bay, Long Island Sound, the Black Sea, the Baltic Sea, and elsewhere." RACHEL'S ENVIRONMENT & HEALTH WEEKLY #557, July 31, 1997

"Mystery Poison found in Carmel River"
"Health Dept warns that children, pets should stay away."
-Carmel Pine Cone Headlines Sept 19 1997
At least three dogs died from Oct 1996 to September 1997 immediately after drinking from the standing pools in the Carmel River. One attending veterinarian suspected a blue-green algae (also known as cyanobacteria), but there was no investigation. "I've been here 35 years and never seen anything like this before." said Carmel Valley veterinarian Gerald Petkus. County Health Dept Director Melton said two other dogs died after drinking water in 1996. No water samples were taken. According to Melton the algae is "very toxic to any animal" (this presumably includes humans).

Overpumping the Carmel River increases this risk.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Algal Blooms including Pfisteria.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 443 - OTHER WATER BORNE PATHOGENS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Other Water Borne Pathogens.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Monterey County Health Dept Director Melton said "most Californian's realize the shouldn't drink from any surface water in rivers or lakes because of widespread contamination by Salmonella, E-coli bacteria (from leaking septic tanks) and the parasite called Giardia, which comes from the droppings of coyotes, foxes, marmots and beavers."
-Carmel Pine Cone Sept 19 1997

Overpumping the Carmel River increases this risk.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Other Water Borne Pathogens.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 444 - WATER CONTACT BACTERIA.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Contact Bacteria.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Coastal states report unhealthy levels of pollution related bacteria at swimming beaches. There were more than 2,500 beach closings in 1996.

"In 1990 Monterey County had more beach closures than the entire state of New Jersey and in the late 1980's Lover's Point and the Cannery Row area of Pacific Grove were among the worst offenders." Herald Oct 27 1999 FP

On October 11, 1999 Monterey County Environmental Health Dept. found enterococcus bacteria at Ocean Ave in Carmel at levels three times higher than state safety standards. In August 1999 they found a similar problem at Stillwater Cove in Pebble Beach. Contact with that bacteria can lead to several gastrointestinal illnesses.

The County delayed a week before posting warning signs on Carmel beach.
-Herald Oct 22 99

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Contact Bacteria.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 445 - SEWAGE SPILLS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewage Spills.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Contact with water contaminated with sewage can cause gastroenteritis
hepatitis, typhoid, polio, diarrhea, and ear infections.

"Health officials warned that contact with contaminated water can cause gastroenteritis as well as hepatitis, typhoid and polio."
Herald Mar 23
2000

CALIFORNIA
"In 1998, beaches statewide were closed for a combined total of 3,273 days, compared to 745 days in 1991, according to the most recent data available from the Natural Resources Defense Council. Sewage spills and urban runoff caused the majority of the closures." AP May 28, 2000

PEBBLE BEACH
Monterey County Health Dept closed the Spanish Bay beach "for a few days to a week" beginning on March 22 2000 because of a sewage spill from a broken sewer main. Herald Mar 23 2000

"Contamination shuts Stillwater Cove" headline Herald Apr 6 2000 "High levels of fecal coliform have been found...coming from a storm sewer that drains the famous Pebble Beach Golf Links, said Walter Wong, the county's director of Environmental Health."

CARMEL
"About 1,000 gallons of sewage spilled into Mission Trail Park in Carmel early Thursday evening." From the park it flowed into nearby Mission Trail creek, than about half a mile down to the Carmel River and into

the Carmel River Lagoon and the Carmel Bay. "Emergency crews flushed the spill area with bleach and about 1000 gallons of water." Herald, Mar 24, 2000

CHLORINE
Chlorine bleach is the standard application after a spill. Chlorine is extremely toxic and reactive itself.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewage Spills.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 446 - SEWAGE RUNOFF.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Sewage Runoff.
- If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
- The Carmel Area Wastewater District was given multiple stop orders in the 1990's for allowing sewage overflow into the Carmel River.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewage Runoff.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 447 - STANDING RIVER WATER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Standing River Water.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Excessive pumping from the Carmel River reduces river flows - especially

during late summer in California.

Low river flows cause standing water pools.
Standing water pools cause toxic blue-green algae blooms.
"Mystery poison found in Carmel River"
"Health Dept warns that children, pets should stay away."
-Carmel Pine Cone Headlines Sept 19 1997
At least three dogs died from Oct 1996 to September 1997 immediately
after drinking from the standing pools in the Carmel River.
One
attending veterinarian suspected a blue-green algae (also known as
cyanobacteria), but there was no investigation. "I've been here 35 years
and never seen anything like this before." said Carmel Valley
veterinarian Gerald Petkus. County Health Dept Director Melton said two
other dogs died after drinking water in 1996. No water samples were
taken. According to Melton the algae is "very toxic to any animal" (this
presumably includes humans).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Standing River Water.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 448 - ELEVATED WATER TEMPERATURES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Elevated Water Temperatures.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Elevated water temperatures can lead to stress, poor condition and poor survival in aquatic species.

As water temperature rises the maximum amount of dissolved-oxygen the water can hold decreases. Water can hold a maximum of about 15% DO at 0 (zero) degrees C, but only about 9% at 20 degrees C. Environmental Science; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993 p 289

When a watercourse is lowered by pumping, the river or stream temperature increases. This increase can imperil fish and amphibians who depend on milder water temperatures for habitat and reproduction.

Trees cool large amounts of surface level air and land (especially black asphalt) by providing shade and by evaporation. When streamside trees

are removed the temperature of the stream can rise 10 degrees F or more.

Warm water discharge associated with power plants (Diablo Canyon nuclear and Moss Landing fuel powered) "can cause serious damage to giant and bull kelp forests through loss of adult tissue and early death as well as retardation of gametophytic and sporophytic development." DEIR Giant & Bull Kelp Fishing Regulations, Dec 2000

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Elevated Water Temperatures.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 449 - RUNOFF WATER TEMPERATURE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Runoff Water Temperature.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Runoff from an asphalt road or parking lot may have a temperature of 83 degrees F or more in the summer. Sensitive species such as trout prefer a temperature of 68 degrees F or less and begin dying when water temperature reaches 77 degrees F." The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Runoff Water Temperature.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

* 451 - RUNOFF WATER TEMPERATURE IMPACTS ON THE RED-LEGGED FROG.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Runoff Water Temperature Impacts on the Red-Legged Frog.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Runoff Water Temperature Impacts on the Red-Legged Frog.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.	25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.	The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Roadway Capacity.
5a. Please state the METHOD of measurement used to determine the significance for each criteria.	26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.	27. Please state whether the MARGIN of ERROR is measured or assumed.	Please graph the road capacity needed through the construction phase of the project.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.	28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.	Please graph the road capacity available through the construction phase of the project.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.	29. Please list all potential CUMULATIVE impacts related to this one.	QUANTIFICATION OF BASELINES AND IMPACTS: This impact appears to be potentially significant.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.	30. Please describe all potential CUMULATIVE impacts related to this one.	1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Roadway Capacity.
9. Please state the variance's MARGINS of ERROR or confidence level.	31. Please quantify all potential CUMULATIVE impacts related to this one.	1b. If no objective criteria are used please state that clearly.
10. Please state whether this MARGIN of ERROR is measured or assumed.	32. Please list, describe and quantify all potential compound and synergetic impacts.	2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
11. If an average is used, please state which kind of average.	33. Please list, describe and quantify all Construction impacts related to this one.	3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
12. Please state the most extreme values which could be encountered.	34. Please list, describe and quantify all Growth impacts related to this one.	3b. Please quote the definition used.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.	35. Please list, describe and quantify all Indirect impacts related to this one.	4. If no measurement units are used please state that clearly.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.	36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.	5a. Please state the METHOD of measurement used to determine the significance for each criteria.
15. Please provide a graph of HISTORICAL measurements.	37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.	5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
16. Please quantify the length of time this impact would last.	38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.	6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.	39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.	7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.	40. Please state whether the margin of error is measured or assumed.	8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.	41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.	9. Please state the variance's MARGINS of ERROR or confidence level.
20s. Please state whether this MARGIN of ERROR is measured or assumed.	42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.	10. Please state whether this MARGIN of ERROR is measured or assumed.
20b. If no margin of error is used please state that clearly.	43. Please name each EXPERT who prepared and reviewed this impact.	11. If an average is used, please state which kind of average.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.	44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.	12. Please state the most extreme values which could be encountered.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.	45. Please provide AVOIDANCE MITIGATION for this impact.	13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	46. Please provide the reverse of this impact as Mitigation.	14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
24. Please state whether the MARGIN of ERROR is measured or assumed.	47. Please provide an ALTERNATIVE which avoids this impact.	
	48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.	
	-	

* 452 - ROADWAY CAPACITY.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 453 - LEVEL OF SERVICE (LOS) DELAY INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Level of Service (LOS) Delay Increase.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Level of Service measures traffic time delay up to 60 seconds.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Level of Service (LOS) Delay Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 454 - VOLUME TO CAPACITY RATIO (V/C) DELAY INCREASE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Volume to Capacity Ratio (v/c) Delay Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The Pebble Beach Lot Program FEIR used a v/c increase of one percent as a significant impact with an existing evening rush hour (PM) Level of Service of "F".

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Volume to Capacity Ratio (v/c) Delay Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 455 - TRAFFIC GROWTH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Traffic Growth.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Traffic Growth.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 456 - TRAFFIC VOLUMES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Traffic Volumes.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The Pebble Beach Lot Program FEIR used a traffic increase of one percent as a significant impact with an existing PM Level of Service of "F".

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Traffic Volumes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 457 - QUEUE LENGTH INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Queue Length Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

My training and experience as senior design engineer for an English race car manufacturer (Eldon/Saracen of Maidstone, Kent), many years study and teaching of higher math and applied physics and 30 years as a computer scientist makes it easy to understand the very basic engineering involved with determining traffic and other impacts this project would cause and worsen.

Queue Length is a another way to measure delay distinct from Level of Service. It measures the distance cars are stopped from an intersection.

Level of Service measures time - not distance.
Level of Service does not and cannot measure delay beyond 60 seconds.
Queue Length can measure delays far beyond one minute - up to hours.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Queue Length Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 458 - DELAY IN VEHICLE-HOURS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Delay in Vehicle-Hours.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Maximum and average driving delay can be measured in vehicle hours.
Access, p 22, Spring 2000, University of California Transportation Research

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Delay in Vehicle-Hours.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 459 - RELATIVE TRAFFIC LEVEL INCREASE (1 NEW VEHICLE TRIP IS SIGNIFICANT).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Relative Traffic Level increase (1 new vehicle trip is significant).

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

According to TAMC the two Intersections from Highway 1 to Carmel Valley,
Carmel Valley Road and Rio Road, are both operating at LOS "F" as of 1998.

Cal-Trans standard for a significant impact when an existing intersection is at LOS "F" is the addition of a single vehicle trip.
Any activity creating at least one new vehicle trip during rush hour is causing a significant impact:

"It is the Department's position that the addition of even one peak hour trip in a LOS 'F' environment represents a significant impact." (Cal-Trans letter dated Nov 18, 1997 to the Monterey County Planning Dept on the September Ranch project.)

LOS stands for "Level of Service" where the scale ranges from 'A' to 'F'

'A' means free-flowing, 'F' means gridlock - measured as a minimum trip delay of 60 seconds.

"Peak hour trip" means during rush hour (8 - 9:30 am and 4:00 - 5:30 pm)

Monterey County Public Works:

"If the Intersection is already operating at LOS F, any increase (one vehicle) in the critical movements volume to capacity ratio is considered significant."

"For Intersections already operating at unacceptable levels D or E, a significant impact would occur if a project adds 0.01 or more to the critical movements volume to capacity ratio."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Relative Traffic Level increase (1 new vehicle trip is significant).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 460 - COMMUTING TRAFFIC.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Commuting Traffic.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- The larger the distance between a job and the home - the more commuting traffic is caused.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Commuting Traffic.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 461 - TOURIST TRAFFIC.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Tourist Traffic.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Tourist Traffic can be significant in areas, like the Monterey Peninsula, where non-trivial amounts of hotels depend upon and advertise for tourist business. Tourist Traffic increases in the Summer as opposed to Holiday Traffic which centers around holidays.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Tourist Traffic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 462 - HOLIDAY TRAFFIC.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Holiday Traffic.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

According to a 1999 Calif State Automobile Assoc survey "Monterey is one of the most popular destinations for in-state travelers, along with Tahoe and Southern California." Inns in Carmel and Pacific Grove were about 70 percent sold out for Thanksgiving 1999.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Holiday Traffic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 463 - CONSTRUCTION TRAFFIC VOLUMES.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Construction Traffic Volumes.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

You can't have construction without construction vehicle traffic.

A single truck can carry about 10 cubic yards or soil or rock. Every 100 cubic yards of material removed requires at least 10 round trip truck trips - or 20 one-way truck trips. This does not include the heavy vehicle trips required for the equipment to load the trucks nor the support vehicles used by the employees.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Traffic Volumes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 464 - CONSTRUCTION TRUCK TRAFFIC.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Truck Traffic.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

What is the maximum number of tractor trailers which will be allowed on site at any one time?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Truck Traffic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Employee Traffic.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Construction crews finish work at rush hours. Construction employee traffic using private cars and other vehicles inherently adds to peak hour traffic congestion.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Employee Traffic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

* 465 - CONSTRUCTION EMPLOYEE TRAFFIC.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 466 - HIGHWAYS CAUSE GROWTH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Highways Cause Growth.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Highways Create Demand for Travel and Expansion by Their Very Existence."

In January 1997 US Federal District Court, Judge Suzanne B. Conlon for the Northern District of Illinois, Opinion wrote:

"Highways create demand for travel and expansion by their very existence. Swain v. Brinegar, 517 F.2d 766, 777 (7th Cir.1975); Def. 12 (M) Par. 86. However the final impact statement in this case relies on the implausible assumption that the same level of transportation needs will exist whether or not the toll road is constructed."
"[FHWA's] decision in this regard was arbitrary and capricious.
5 USC Sec 706(2)(a)."

This federal court opinion further reinforces the consensus of expert and legal opinion that expanded road capacity generates changes in travel and land activities that must be accounted for in project and plan appraisals. As one of the panelists at a Transportation Research Board (TRB) Annual Meeting session on the

induced travel effects of highway capacity changes observed last week, to general agreement from all other panelists, including Kevin Heanue, Director of Environment and Planning at FHWA, "There is no longer a question that these dynamics occur. The only question is how large are the effects in a particular case."

It should be obvious that since a lack of roads constrains growth, any increase in roads allows growth.

"Environmental Impact Statements on highways and sewage treatment plants seldom evaluate the resulting impact on urban growth patterns. These secondary effects may, however, be more damaging than the primary effects. The second form of shortsightedness is the tendency to consider only changes in the physical environment and to ignore changes in the social environment. Yet impacts on pollution patterns or community behavioral patterns may affect the quality of the human environment much more than impacts on air or solid waste."

U.S. EPA, letter to the President's Council of Environmental Quality
21 December, 1971

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Highways Cause Growth.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 467 - ADDING TRAFFIC LANES AS MITIGATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Adding Traffic Lanes as Mitigation.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

There is now overwhelming evidence, including a nationwide study of 70 metropolitan areas over 15 years (Texas Transportation Institute), another California specific study (Hansen 1995) which included Monterey County, that when an area is congested - additional lanes do not provide congestion relief.

These studies show that when an area is congested - additional lanes do not provide congestion relief. It is documented that additional lanes increase traffic.

Further it has been demonstrated in San Francisco and New York that when lane miles are removed congestion is alleviated (e.g. SF Central Freeway 1996, New York's West Side Highway 1988) shows that "When road capacity shrinks - So Can traffic" - Auto Free Times Winter 1996-97.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Adding Traffic Lanes as Mitigation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 468 - ROAD CONSTRUCTION DELAYS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Road Construction Delays.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- The Surface Transportation Policy Project (STTP) released a fall 1999
report "Road Work Ahead: Is Construction Worth the Wait?"
The study
found that motorists can lose more time in road construction delays than
they will save in years of driving on the newly "improved" road.
- In a case study, the report highlights Trenton' Route 29 project, an \$85 million, four lane highway along the Delaware waterfront. The report shows that traffic delays stemming from the project are so long that it will take ten years for drivers to make up the time and actually benefit from the project. (Auto-Free Times Spring 2000, p 16)
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Road Construction Delays.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
The Pigou-Knight-Downs Paradox.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Economic theory can be applied to transportation. The Pigou-Knight-Downs paradox helps explain why expanding road capacity may elicit new demand with no improvement in congestion. The social cost of a trip on a congested roadway equals the private cost plus the cost of time lost in congestion.

Yet drivers can only rationally choose the route with the lower private cost. Expanding capacity may only reconvert the route with drivers who had been using alternative roads with spare capacity but a longer distance and travel time.

Please analyze the potential impacts of Pigou-Knight-Downs Paradox on the proposed roadway increases.
(by Sherman L. Lewis, Professor of Political Science
California State University, Hayward)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
The Pigou-Knight-Downs Paradox.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

* 469 - THE PIGOU-KNIGHT-DOWNS PARADOX.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 470 - ADDITIONAL STOP SIGNS INCREASING NOISE.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Additional Stop Signs Increasing Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

As vehicles accelerate away from a stop sign the engine noise rises
significantly above that of a vehicles transiting the same road at
a constant rate.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of
Additional Stop Signs Increasing Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 471 - ADDITIONAL STOP SIGNS INCREASING DELAY.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Additional Stop Signs Increasing Delay.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Travel times increase for every vehicle as stop signs are added,
decreasing free flowing traffic which harms an area's Level of Service (LOS).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Additional Stop Signs Increasing Delay.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 472 - ADDITIONAL STOP SIGNS INCREASING DELAY.**

Travel times increase for every vehicle as stop signs are added,
decreasing free flowing traffic which harms an area's Level of Service (LOS).

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Additional Stop Signs Increasing Delay.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the
Primary mitigation measure:
Additional Stop Signs Increasing Delay.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the
primary mitigation measure:
Additional Stop Signs Increasing Delay.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the
primary mitigation measure: Additional Stop Signs Increasing Delay.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Signs Increasing Delay.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Signs Increasing Delay.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSIs and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 473 - ADDITIONAL STOP LIGHTS INCREASING DELAY.

Travel times increase as stop lights are added, decreasing free flowing traffic which harms an area's Level of Service (LOS).

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Additional Stop Lights Increasing Delay.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the
Primary mitigation measure:
Additional Stop Lights Increasing Delay.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the
primary mitigation measure:
Additional Stop Lights Increasing Delay.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Additional Stop Lights Increasing Delay.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Lights Increasing Delay.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Lights Increasing Delay.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 474 - ADDITIONAL STOP SIGNS INCREASING AIR POLLUTION.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of

Additional Stop Signs Increasing Air Pollution.

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

Air pollution increases as stop signs are added. Stopped and accelerating vehicles emit significantly more air pollution than vehicles traveling at a steady state. Vehicle engines change speed when accelerating and decelerating, it is less efficient than when it operates at a steady speed. The amount can be roughly calculated from by comparing vehicles mpg figures in urban areas to their highway mpg. A range of 10% to 50% is typical. The increased air pollution should be similar in amount. Interestingly vehicles emit more pollution when coasting or decelerating than when accelerating.

When stop signs are added to residential areas, morning air pollution increases significantly because vehicles emit huge amounts of pollution upon startup, for about the first five miles, before the catalytic converters get up to operating temperature.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Additional Stop Signs Increasing Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 475 - ADDITIONAL STOP LIGHTS INCREASING AIR POLLUTION.

Air pollution increases as stop lights are added. Stopped and accelerating vehicles emit significantly more air pollution than vehicles traveling at a steady state. When stop lights are added to residential areas, morning air pollution increases significantly because vehicles emit huge amounts of pollution for about the first five miles before the catalytic converts get up to operating temperature.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Additional Stop Lights Increasing Air Pollution.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Additional Stop Lights Increasing Air Pollution.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Additional Stop Lights Increasing Air Pollution.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Additional Stop Lights Increasing Air Pollution.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Lights Increasing Air Pollution.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Additional Stop Lights Increasing Air Pollution.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONISs and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 476 - STOP LIGHTS CAUSING ACCIDENTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Stop Lights Causing Accidents.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

In two months, a new traffic light installed on Highway 156 @ Castroville Blvd in Castroville, CA caused seven accidents including one fatality. "Its typical of what happens when a new traffic light or a stop sign is put in somewhere and people aren't used to it." according to Officer Tosha Jackson, spokeswoman for the California Highway Patrol in Salinas. -Herald, Mar 30, 2000

Monterey County Public Works Director Lew Bauman "New traffic signals, he cautioned, often result in serious accidents as people get used to them." Herald, May 20,00 pg A16

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Stop Lights Causing Accidents.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 480 - PHYSICAL DIVISION OF AN ESTABLISHED HUMAN COMMUNITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Physical Division of an established Human Community.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Freeways create a barrier to human travel.
This impact is normally significant and unmitigable.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Physical Division of an established Human Community.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20a. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
 45. Please provide AVOIDANCE MITIGATION for this impact.
 46. Please provide the reverse of this impact as Mitigation.
 47. Please provide an ALTERNATIVE which avoids this impact.
 48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 481 - DISPLACEMENT.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Displacement.
- If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Displacement.
 - 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
 - 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
 - 3b. Please quote the definition used.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 482 - JOBS-HOUSING IMBALANCE CAUSING FARTHER COMMUTES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Jobs-Housing Imbalance Causing Farther Commutes.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

When a project "creates jobs" - low wage jobs - the employees must travel farther to find affordable housing. This increases vehicle trips and attendant air pollution.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Jobs-Housing Imbalance Causing Farther Commutes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 483 - PHYSICAL DIVISION OF AN ESTABLISHED WILDLIFE COMMUNITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Physical Division of an established Wildlife Community.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

Freeways create a barrier to wildlife travel.
This impact is normally significant and unmitigable.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 484 - WILDLIFE ROADKILL INCREASE.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Wildlife Roadkill Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The more roads and wider roads that divide wild areas, the more wild animals are killed by cars and other vehicles. Imperiled species are killed by vehicles.

"The Humane Society and the Urban Wildlife Research Center estimate that more than 1 million large animals are killed annually on U.S. highways. Roadkills usually increase with traffic speeds and volumes. Studies in the state of Florida indicate that road kills are the primary cause of death for most large mammals, including several threatened species."
(Todd Littman)

The SPCA of Monterey County responds to 15 to 20 vehicle hit deer calls per month during mating season. They say the average car repair cost per collision is \$2,000. (Coast Weekly Nov 26, 2003)

After two years of anecdotal observation I estimate that in coastal Monterey County on roadways allowing 55 mph at least one animal is killed for every two lane-miles every day.

Animals on roads can also kill drivers. Cole Weston hit a horse near the entrance of Pt. Lobos and nearly lost his eye.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Wildlife Roadkill Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 485 - WILDLIFE UNDERPASSES.**

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Wildlife Underpasses.

Highway underpasses designed specifically for deer, panthers and other large mammals are successful at reducing roadkill in many areas. Fences can help funnel animals into the underpasses and bridges. - "Roadside Use Of Native Plants."

*** 486 - ROAD OBLITERATION.**

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of Road Obliteration.

Roads are essentially impervious land.
Removing roads increases infiltration, increases water tables, increases baseflow and decreases runoff temperatures.

This Alternative does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

*** 487 - BICYCLE TRAVEL.**

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Bicycle Travel.

Comparing the Environmental Impacts of Bicycles to Cars.

Bike	Car	
Air pollution	None	NOX,HC,CO2,CO,and the carcinogens benzene, MTBE and formaldehyde

Fuel Consumed	renewable	Limited fossil hydrocarbons
carbohydrates		

Lane Width	2 feet	12 feet

Path width	4 feet	120 feet (ten lanes)

Parking Space	12 ft ^2	120 ft^1

Can be taken on		
Mass Transit	Yes	No

Requires Subsidies		
of Sales Taxes		
& Bonds	No	Yes

*** 488 - BICYCLE TRAVEL.**

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of Bicycle Travel.

Comparing the Environmental Impacts of Bicycles to Cars.

Bike	Car	
Air pollution	None	NOX,HC,CO2,CO,and the carcinogens benzene, MTBE and formaldehyde

Fuel Consumed	renewable	Limited fossil hydrocarbons
carbohydrates		

Lane Width	2 feet	12 feet

Path width	4 feet	120 feet (ten lanes)

Requires Subsidies		
of Sales Taxes		
& Bonds	No	Yes

This Alternative does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits

of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this

alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 489 - CARPOOL PERCENTAGE OVERESTIMATE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Carpool Percentage OverEstimate.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Survey forms returned to the ZeroWaste conference in Monterey in 1998, the showed less than 10 percent of the meeting attendees carpooled.
Please provide substantial evidence of this carpool factor.

If the carpool percentage number is even a small amount too high it can grossly underestimate the traffic and parking needs.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Carpool Percentage OverEstimate.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 490 - HIGHWAY 68 EXCEEDS CAPACITY.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Highway 68 Exceeds Capacity.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Traffic along the entire State Route 68 (SR68) corridor currently exceeds capacity. Approved development along SR68 will increase congestion by approximately 20% creating longer peak periods on both SR68 and Blanco Road." Doug Bilsee, Recent TAMC Senior Transportation Planner quoted in TAMC Minutes Oct 27, 1999 (From Highway 68 Corridor Study)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Highway 68 Exceeds Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 491 - HOLMAN HIGHWAY - HIGHWAY 68 QUEUE LENGTH INCREASE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Holman Highway - Highway 68 Queue Length Increase.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The existing queue length from Highway 1 backing up towards Pacific Grove during morning and evening rush hour often extends for a half mile. It is not unusual for the stop and go traffic to extend beyond the Skyline Forest intersection. The typical delay takes a half dozen light cycle changes to advance southward through the Highway 1 Signalized intersection.

At the same time, the existing queue length from Highway 1 backing down towards Monterey during morning and evening rush hour often extends for a half mile. It is not unusual for the stop and go traffic to extend down the onramp from Del Monte Center. The typical delay takes a half dozen light cycle changes to advance westward through the Highway 1 Signalized intersection.

At the same time, the existing queue length from Highway 1 backing up towards Carmel during morning and evening rush hour often extends for

a half mile. It is not unusual for the stop and go traffic to extend back onto the freeway prior to the offramp for Pacific Grove. The typical delay takes a half dozen light cycle changes to advance westward through the Highway 1 Signalized intersection.

None of these three conditions are at the same time as event traffic or during a tourist season or a holiday. All three of those add additional vehicles and delay.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Holman Highway - Highway 68 Queue Length Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 492 - HIGHWAY 1 TOWARDS BIG SUR QUEUE LENGTH INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of

Highway 1 towards Big Sur Queue Length Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The existing queue length from Rio Road backing up towards Big Sur on weekends and holidays often extends for several miles. It is not unusual for the stop and go traffic to extend to Rocky Point - some 8 miles. The typical delay takes dozens of light cycle changes to advance northward through the Rio Road Signalized intersection.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Highway 1 towards Big Sur Queue Length Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 493 - CARMEL VALLEY ROAD QUEUE LENGTH INCREASE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Carmel Valley Road Queue Length Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The existing queue length at Carmel Valley Road extends for over a half mile east to the signalized intersection at the Middle School. It typically takes 5 light cycle changes to advance westward through the Rancho Blvd Signalized intersection.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Carmel Valley Road Queue Length Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 494 - GLYPHOSATE (RODEO OR ROUNDUP ETC.) PESTICIDE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Glyphosate (Rodeo or Roundup etc.) Pesticide.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Glyphosate is one of the most common poisons used in the United States. According to a U.S. Environmental Protection Agency (EPA) report some 38-48 million pounds were used in the U.S. in 1997.

"Glyphosate was not included in a USGS study of pesticides in watersheds because the method of analysis is difficult and time consuming." Joseph Domagalski, USGS, Sacramento.

"[Glyphosate was] registered, in part, from data generated by a company called Industrial Biotest (IBT). IBT was the nation's largest commercial toxicological testing company until its fraudulent testing was discovered in [1976]." "All of Monsanto's toxicological registration data for Roundup came from IBT." "[IBT] performed fraudulent tests absolving Roundup of causing mutations in mice and tumors in rabbits." Beyond the Beauty Strip, Mitch Lansky 1992, Tilbury House

"Roundup is Monsanto's most profitable product." Rachel's Environment and Health Weekly #637, #638, #639

When EPA registers a chemical - The product itself is not tested only the "active" ingredient, in this case the (Glyphosate) chemical.

Chemical ingredients of the poisonous pesticides called "Inerts" are often toxic and can compose more than 99 percent of the product, yet the DEIR does not recognize, disclose, analyze or mitigate them. Please fix this. (See PANUPS article attached)

RACHEL'S ENVIRONMENT & HEALTH WEEKLY #590, March 19, 1998
FROGS, ALLIGATORS, AND PESTICIDES -
"The Australian government in 1997 took an unprecedented action, banning 84 herbicide products for use near water because of their harmful effects on tadpoles and frogs.[8]

"All of the 84 banned products contain Monsanto's glyphosate as the active ingredient. However, the harmful component appears to be not the glyphosate itself but an 'inert' ingredient --a detergent or wetting agent added to the herbicides so that droplets of liquid spread out and cover the target leaves."

"Detergents interfere with the ability of frogs to breathe through their skin, and tadpoles to breathe through their gills. Michael J. Tyler of the Department of Zoology at the University of Adelaide, Australia, says, "Although the herbicide [glyphosate] is claimed to be 'environmentally friendly,' it is clear that users have been lulled into a false sense of security."

[8] Michael J. Tyler, "Herbicides Kill Frogs," FROGLOG No. 21 (March 1997), pg. 2.

What is the chemical composition of each of the "inerts" in the Glyphosate products proposed for use?

The herbicide Roundup, manufactured by Monsanto and marketed as an "environmentally friendly" chemical, is a case in which some of the known inert ingredients in some formulations have far greater toxicity than the active ingredient (glyphosate). Two of these ingredients, isopropylamine and polyethoxylated tallowamines (POEAs), cause a range of health problems including nausea, vomiting, diarrhea, wheezing, burns, excess fluids in the lungs and eye, skin and gastrointestinal irritation. Glyphosate products were the third leading cause of both acute pesticide poisoning and skin and eye illnesses among California farm workers between 1984 and 1990.

According to a 1990 "Spectrum Report done for Maine's Forest for the Future Program - Rainbow Trout fingerlings (essentially genetically identical to the ESA listed Steelhead) has a LC-50 of 1.3 milligrams per liter with Roundup. This is in dramatic contrast to Glyphosate alone which California's Department of Fish & Game asserts has an LC-50 of 130 milligrams per liter.

Chemicals known to be toxic (e.g., POEA or polyoxyethyleneamine, naphthalene, and zinc). POEA is present in Monsanto's glyphosate formulations Roundup and Vision. The POEA is 400 times more toxic to

immature salmon than a glyphosate formulation, Rodeo, that contains no POEA. It belongs to a class of surfactants that have been reported to cause adverse gastrointestinal and central nervous system effects and damage to red blood cells. POEA is contaminated with 1,4-dioxane, a chemical that causes toxic effects in the liver and kidneys of humans and various cancers in numerous animal species.

Surfactants can have two effects on droplet surface tension. They can increase or decrease surface tension, but they can not do both.

Increasing surface tension makes larger drops which drift less and do not adhere to plants as well.

Decreasing surface tension makes smaller drops which drift more and absorb better to target plants.

So please clarify which is proposed?
Less or more surface tension?

What impurities are allowed by EPA in the glyphosate product?

What amounts of each impurity is allowed by EPA in the glyphosate product?

What illegal impurities have been found in the glyphosate product?

What amounts of each impurity has been found in the glyphosate product?

Metabolites and breakdown products of Glyphosate include the Proposition 65 known carcinogen Formaldehyde. It also causes gene mutations and is a reproductive toxicant. (CATs citing Lund 1986)

What amounts of Formaldehyde will be released by the proposed use?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Glyphosate (Rodeo or Roundup etc.) Pesticide.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 495 - DDT.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of DDT.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The EPA has set the Ambient Water Quality Protection of Aquatic Organisms criteria for DDT at 1 part per Trillion (with a "T").

Contrary to almost everyone's belief, DDT is not banned in the US.

After a public outcry and several lawsuits it was "cancelled" in 1973

(37 FR 13369), which does not mean DDT cannot be manufactured or exported or even used in the US if EPA finds certain uses are necessary.

In fact DDT is manufactured in the US, some 65 tons were exported in 1992 (the most recent year records are available) and if the EPA Secretary for some reason (like an emergency) decides to - she could allow DDT's immediate U.S. use. DDT can also turn up as an "impurity" in some products up to 15 percent (legally up to 50%) by weight.

DDT has a biological half life of 8 years. Three half-lives have passed since it was supposedly "banned," yet it is turning up fresh in many rivers around the US.

"DDT is being preserved in soils all over California." DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is on the US EPA's CWA 303(d) list for Pesticide contamination exceeding TMDL limits. The pesticides come from Agriculture, Irrigated Crop production, Agriculture-storm runoff, Agriculture-irrigation tailwater, Agriculture Return flows, and non-point source pollution.

"DDT has been found in moderate to high concentrations in the Salinas River and lower Moss Landing watershed for many years." DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

US-EPA's Preliminary Remediation Goal (PRG) for DDT concentrations is 5.6 mg/kg.

Western Farm Service in Salinas, CA had DDT soil concentrations detected up to 251 gm/kg in 1992.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of DDT.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 496 - PEPPERMINT OIL (DDT ALTERNATIVE).

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Peppermint Oil (DDT Alternative).

Peppermint Oil (from *Mentha pipeirta*) floated on top of mosquito larvae-filled water killed nearly all larvae in 24 hours.

Applied to humans as a repellent it averaged 85% effective. It was especially effective against *Anopheles culicifacies* - the principal malaria carrier in India. - Scientific American Feb. 2000 citing Bioresource Technology

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 497 - ORGANOPHOSPHORUS PESTICIDE COMPOUNDS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Organophosphorus Pesticide Compounds.

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

Organophosphorus pesticide compounds include Diazinon and Malathion and are nerve agents originally developed in Nazi Germany in the 1930s. Because Organophosphorus pesticides are now widely used on food crops they were the first family of compounds to be evaluated under the 1996 FQPA.

CUMULATIVE

According to Mark Miller, M.D. MPH a member of the Environmental Health Committee of the American Academy of Pediatrics (quoted in Coast Weekly April 22 1999) - even low level exposure to Organophosphorus pesticide compounds (e.g. diazinon, cypermethrin, Chlorpyrifos, hydramethlynon, propetamphos and Malathion) may cause symptoms. "The effects of organophosphates are cumulative so that if the chemical used in the home and in food is added to those used on school grounds, something may tip the bucket."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Organophosphorus Pesticide Compounds.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 498 - DIAZANON.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Diazanon.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Unreported pesticide use is about 20 percent of total California pesticide use. Obviously for some specific chemicals that percentage is higher. In the case of Diazanon it is a lot higher at about 45% of all Diazanon use. Which helps explain why Diazanon is the second most commonly detected pesticide detected in California surface waters. ("Disrupting the Balance", 1999 CPR)

According to Mark Miller, M.D. MPH a member of the Environmental Health Committee of the American Academy of Pediatrics (quoted in Coast Weekly April 22 1999) - even low level exposure to Organophosphorus pesticide

compounds (e.g. diazinon, cypermethrin, Chlorpyrifos, hydramethlynon, propetamphos and Malathion) may cause symptoms. "The effects of organophosphates are cumulative so that if the chemical used in the home and in food is added to those used on school grounds, something may tip the bucket."

Organophosphorus pesticide compounds (e.g. Diazinon and Malathion) are nerve agents originally developed in Nazi Germany in the 1930s.

The twenty most heavily used golf course pesticides in the US in 1982 (and their use in thousands of pounds of active ingredient) were:
Chlorothalonil (1,298), MCPP mecoprop (1,096), MSMA (834), Iprodione (815), Thiram (635), Diazinon (512)...

The EPA has set the Ambient Water Quality Protection of Aquatic Organisms criteria for Diazinon at 9 parts per TRILLION.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Diazinon.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 499 - TRICHLOROETHYLENE (TCE).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Trichloroethylene (TCE).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

TCE is on the ATSDR list of hazardous substances (N=275) of the 20 most hazardous Substances:

TCE (Trichloroethylene) is known to the state of California to cause cancer and listed under Proposition 65.
It was found widely in Ft. Ord's groundwater at levels up to 400 ppb.

It is mislabeled in Federally registered pesticides as an "inert" ingredient.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of

Trichloroethylene (TCE).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 500 - SEWAGE SLUDGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Sewage Sludge.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

"Toxic chemicals, infectious organisms, and endotoxins or cellular material may all be present in biosolids."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewage Sludge.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 501 - ETHYLENE GLYCOL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Ethylene Glycol.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Vehicle antifreeze is typically made of Ethylene Glycol.
"As little as two ounces of Ethylene Glycol can kill a dog and only one
teaspoon is enough to kill a cat." Safe Brands Co. brochure, Omaha NE
At least one condor has died from drinking water containing
Ethylene Glycol antifreeze.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact
significance of
Ethylene Glycol.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 502 - PROPOLYENE GLYCOL.

The Document appears to have ignored this potentially feasible Alternative.

Please carefully analyze and disclose the potential benefits of Propylene Glycol.

Propylene Glycol is an alternate antifreeze chemical which is generally considered non-toxic to children and wildlife.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or

assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 503 - PEPPERMINT OIL.

The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of Peppermint Oil.

Peppermint Oil can repel mosquitos and kill nearly all their larvae

when floated on their breeding water. Scientific American Feb, 2001, p 24

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 504 - MOLD - STACHYBOTRYS CHARTARUM.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Mold - Stachybotrys Chartarum.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A smelly greenish-black natural fungus along Coastal California. It can grow where ever buildings have a water leak. It has toxic and allergic properties. Some doctors advise "vacate and remediate" in order to prevent "irreversible brain damage and pulmonary bleeding." Herald Oct 21, 2001

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of
Mold - Stachybotrys Chartarum.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 505 - PHTHALATES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Phthalates.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Ubiquitous man-made oily solvents which make plastic flexible have become the most abundant chemicals in the environment. They can produce reproductive impairment in males at levels of 100 mg of DBP / kg of body weight in mother. Sci News Apr 3, 99

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Phthalates.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 506 - WASTE GENERATION, DISPOSAL & REDUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of

Waste Generation, Disposal & Reduction.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Waste Reduction Rates Mandated by Law
Assembly Bill 939 requires each city and county within California to reduce its waste stream by 50% by the year 2000. The County of Monterey is currently implementing programs to meet this mandated goal. Because this project is located within Monterey County, all waste generated during any phase of the project will become part of the County's overall waste stream. The hundreds of tons of waste from this project, if landfilled, would have a significant impact on the County's overall

recycling rate, driving it downward, and potentially hindering the County from reaching and maintaining the 50% reduction mandate. This failure in reaching and/or maintaining the recycling rate could potentially result in the California Integrated Waste Management Board issuing fines of \$10,000 per day until the County meets the 50% recycling rate.

It is imperative that the specific steps be described in detail that will be taken to ensure that construction and clearing debris will be kept out of the landfill and reused or recycled to the greatest extent possible. A detailed plan for reuse and recycling of all debris generated during the project needs to be included in the Environmental Impact Report. The specific areas to be addressed should include (but does not represent an extensive listing):

1) Reuse and Recycling of Debris Created during Clearing:

A. Soil:

1. How many tons of soil will be removed during clearing?
2. How will this be disposed of?
3. What percentage of it will be landfilled?
4. If landfilled, where will it be disposed?
5. Will it be kept separate from other debris (rocks, trees, brush, etc.) to be classified as "clean soil" to be reused?
6. What percentage will be kept separate?
7. How will it be kept separate from other types of debris?
8. Will it be reused at the Marina Landfill as clean soil?
9. What percentage of total soil will be reused in this manner?
10. If not reused at the Marina landfill, what other sites will accept the soil for reuse or recycling?
11. What percentage of soil will be reused at the construction site?
12. How will it be reused on site?
13. How much will it cost (disposal fees and transportation costs) to dispose of this soil?
14. How many truck trips will be needed to transport the soil to the disposal or reuse site?
15. How many days will be required to transport all the soil?
16. What impacts will these truck trips have on existing traffic?

B. Trees and Vegetation:

1. How many tons of trees and vegetation (trunks, branches, stumps) will be removed during clearing?
2. What percentage of it will be landfilled?
3. If landfilled, where will it be disposed?
4. Will it be kept separate from other debris (rocks, soil, brush, etc.) to be classified as "clean wood waste or yard waste" to be recycled?
5. What percentage will be kept separate?
6. How will it be kept separate from other types of debris?
7. Will it be recycled at the Marina Landfill in their wood processing line?
8. What percentage of total trees will be recycled in this manner?
9. If not recycled at the Marina landfill, what other sites will accept the trees for recycling?
10. How will stumps be disposed of--reused, recycled, or landfilled?
11. How much will it cost (disposal fees and transportation costs) to dispose of the trees?

12. How many truck trips will be needed to transport the trees to the disposal or reuse site?
13. How many days will be required to transport all the trees?
14. What impacts will these truck trips have on existing traffic?

C. Rocks--

1. How many tons of rocks will be removed during clearing?
2. What percentage of these will be landfilled?
3. If landfilled, where will it be disposed?
4. Will it be kept separate from other debris (trees, soil, brush, etc.) to be reused?
5. What percentage will be kept separate?
6. How will it be kept separate from other types of debris?
7. Will it be reused at the Marina Landfill?
8. What percentage of total rocks will be reused in this manner?
9. If not reused at the Marina landfill, what other sites will accept the rocks for reuse?
10. What percentage of the rocks will be reused at the construction site?
11. How will it be reused on site?
12. How much will it cost (disposal fees and transportation costs) to dispose of the rocks?
13. How many truck trips will be needed to transport the rocks to the disposal or reuse site?
14. How many days will be required to transport all the rocks?
15. What impacts will these truck trips have on existing traffic?

D. Debris Created During Construction:

1. Wood waste (ex. lumber, plywood, pallets)--
2. How many tons of wood waste will be created during construction?
3. How will it be disposed of?
4. What percentage of it will be landfilled?
5. If landfilled, where will it be disposed?
6. Will it be kept separate from other debris (soil, rebar, concrete, etc.) to be recycled?
7. What percentage will be kept separate?
8. How will it be kept separate from other types of debris?
9. Will it be recycled at the Marina Landfill as part of their wood processing line?
10. What percentage of total wood waste will be recycled in this manner?
11. If not recycled at the Marina Landfill, what other sites will accept the wood waste for recycling?
12. What percentage of lumber, plywood, and/or pallets will be reused at the construction site?
13. How will it be reused on site?
14. How much will it cost (disposal fees and transportation costs) to dispose of the wood waste?
15. How many truck trips will be needed to transport the wood waste to the disposal or recycling site?
16. How many days will be required to transport all the wood waste?
17. What impacts will these truck trips have on existing traffic?

E. Rebar and Other Metal--

1. How many tons of scrap metal will be created during construction?
2. How will it be disposed of?
3. What percentage of it will be landfilled?
4. If landfilled, where will it be disposed?
5. Will it be kept separate from other debris (soil, concrete, wood waste, etc.) to be recycled?
6. What percentage of it will be kept separate?

7. How will it be kept separate from other types of debris?
 8. Will it be recycled at the Marina Landfill?
 9. What percentage of total scrap metal will be recycled in this manner?
 10. If not recycled at the Marina Landfill, what other sites will accept scrap metal for recycling?
 11. How much will it cost (disposal fees and transportation costs) to dispose of the scrap metal?
 12. How many truck trips will be needed to transport the scrap metal to the disposal or recycling site?
 13. How many days will be required to transport all the scrap metal?
 14. What impacts will these truck trips have on existing traffic?

2) Recycled Content Materials Used in Construction:
 Not only is it important to recycle as much of the debris created from the proposed project, but it is also important to utilize construction materials made with recycled content. Following are some major opportunities to integrate recycled feedstock into the project. Please quantify how much recycled material will be used (tons) and what percentage of recycled material to raw material will be used (e.g 50% aggregate roadbase will be from recycled materials).

1. What percentage of asphalt pavement used in the paving or repaving of roads will be made from recycled asphalt paving?
 2. How many tons of recycled materials will be used?

3. What percentage of aggregate roadbase will be recycled aggregate?
 4. How many tons of recycled materials will be used?

5. What percentage of sub-roadbase will be recycled aggregate?
 6. How many tons of recycled materials will be used?

7. What percentage of shoulders will be recycled aggregate?
 8. How many tons of recycled materials will be used?

9. What percentage of reclaimed asphalt roofing scrap will be used in the asphalt paving?
 10. How many tons of recycled materials will be used?

11. What percentage of crumb rubber from recycled tires will be used in the asphalt paving, aggregate base, and subbase?
 12. How many tons of recycled materials will be used?

13. What percentage of recycled glass cullet will be used in the asphalt paving?
 14. How many tons of recycled materials will be used?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Waste Generation, Disposal & Reduction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 507 - LANDFILL LEAKAGE.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of Landfill Leakage.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

All Dumps leak, whether they have superliners or not.

According to Peter Montague and Rachel's Hazardous Waste Weekly:
In the FEDERAL REGISTER Feb. 5, 1981, the EPA first stated its opinion that
All Landfills Will Eventually Leak

"There is good theoretical and empirical evidence that the hazardous constituents that are placed in land disposal facilities very likely will migrate from the facility into the broader environment. This may occur several years, even many decades, after placement of the waste in the facility, but data and scientific prediction indicate that, in most cases, even with the application of best available land disposal technology, it will occur eventually." [pg. 11128]

"Manmade permeable materials that might be used for liners or covers (e.g., membrane liners or other materials) are subject to eventual deterioration, and although this might not occur for 10, 20 or more years, it eventually occurs and, when it does, leachate will migrate out of the facility." [pg. 11128]

"Unfortunately, at the present time, it is not technologically and institutionally possible to contain wastes and constituents forever or for the long time periods that may be necessary to allow adequate degradation to be achieved." [pg. 11129]

"Consequently, the regulation of hazardous waste land disposal facilities must proceed from the assumption that migration of hazardous wastes and their constituents and by-products from a land disposal facility will inevitably occur." [pg. 11129]

More than a year later, on July 26, 1982, the EPA again put its opinions into the FEDERAL REGISTER, emphasizing that all landfills will inevitably leak:

"A liner is a barrier technology that prevents or greatly restricts migration of liquids into the ground. No liner, however, can keep all liquids out of the ground for all time. Eventually liners will either degrade, tear, or crack and will allow liquids to migrate out of the unit." [pg. 32284]

"Some have argued that liners are devices that provide a perpetual seal against any migration from a waste management unit. EPA has concluded that the more reasonable assumption, based on what is known about the pressures placed on liners over time, is that any liner will begin to leak eventually." [pgs. 32284-32285].

In the FEDERAL REGISTER May 26, 1981, pgs. 28314 through 28328), the EPA argued forcefully that all landfills will eventually leak. Another EPA quote:

"Many organic constituents are stable (degrade very slowly); other hazardous constituents (e.g., toxic metals) never degrade. Yet the existing technology for disposing of hazardous wastes on or in the land cannot confidently isolate these wastes from the environment forever.

"Since disposing of hazardous wastes in or on the land inevitable [inevitably?] results in the release of hazardous constituents to the environment at some time, any land disposal facility creates some risk." [pg. 28315]

EPA went on to estimate that the duration of the hazard from a landfill would be "many thousands of years." [pg. 28315] And the Agency said, "The longer one wishes to contain waste, the more difficult the task becomes. Synthetic liners and caps will degrade; soil liners and caps may erode and crack. ...EPA is not aware of any field data showing successful long-term containment of waste at facilities which have not been maintained over time." [pg. 28324]

"Ultimately, waste reduction and resource recovery probably provide the best alternative to land disposal," said the EPA [pg. 28325], though it has never begun any programs to make this happen.

Also Courtesy of Peter Montague and RACHEL'S ENVIRONMENT & HEALTH WEEKLY:

A 1992 report from a California engineering-consulting firm, G. Fred Lee & Associates, has examined recent scientific studies and has confirmed once again why modern "dry tomb" landfill technology will always fail and should always be expected to poison groundwater.[1]

The new report, authored by Fred Lee and Anne Jones, reviews recent evidence--much of it produced by government-funded research--that landfill liners leak for a variety of reasons; that leachate collection systems clog up and thus fail to prevent landfill leakage; that landfill leachate will remain a danger to groundwater for thousands of years; that even low-rainfall areas are not safe for landfill placement; that gravel pits and canyons are particularly dangerous locations for landfills; that maintaining a single landfill's cap for the duration of

the hazard would cost hundreds of billions, or even trillions, of dollars; that groundwater monitoring cannot be expected to detect landfill leakage; that groundwater, once it is contaminated, cannot be cleaned up and must be considered permanently destroyed; and that groundwater is a limited and diminishing resource which modern societies grow more dependent on as time passes.

A 1990 examination of the best available landfill liners concluded that brand-new state-of-the-art liners of high density polyethylene (HDPE) can be expected to leak at the rate of about 20 gallons per acre per day (200 liters per hectare per day) even if they are installed with the very best and most expensive quality-control procedures.[2] This rate of leakage is caused by pinholes during manufacture, and by holes created when the seams are welded together during landfill construction. (Landfill liners are rolled out like huge carpets and then are welded together, side by side, to create a continuous field of plastic.) Now examination of actual landfill liners reveals that even the best seams contain some holes.

In addition to leakage caused by pinholes and failed seams, new scientific evidence indicates that HDPE (high density polyethylene, the preferred liner for landfills) allows some chemicals to pass through it quite readily. A 1991 report from University of Wisconsin shows that dilute solutions of common solvents, such as xylenes, toluene, trichloroethylene (TCE), and methylene chloride, penetrate HDPE in one to thirteen days. Even an HDPE sheet 100 mils thick (a tenth of an inch)--the thickness used in the most expensive landfills) is penetrated by solvents in less than two weeks.

Another problem that has recently become apparent with HDPE liners is "stress cracking" or "brittle fracture." For reasons that are not well understood, polyethylenes, including HDPE, become brittle and develop cracks. A 1990 paper published by the American Society for Testing Materials revealed that HDPE liners have failed from stress cracks in only two years of use. Polyethylene pipe, intended to give 50 years of service, has failed in two years. Lee and Jones sum up (pg. 22), "While the long-term stability of geomembranes (flexible membrane liners) in landfills cannot be defined, there is no doubt that they will eventually fail to function as an impermeable barrier to leachate transport from a landfill to groundwater. Further, and most importantly at this time, there are no test methods, having demonstrated reliability, with which to evaluate long-term performance of flexible membrane liners."

Recent scientific studies of clay indicate that landfill liners of

compacted clay leak readily too. For example, a 1990 study concludes,

"[i]f a naturally occurring clay soil is compacted to high density, thereby producing a material with very low hydraulic conductivity, and if it is maintained within the same ranges of temperature, pressure, and chemical and biological environment, it would be expected to function well as a seepage barrier indefinitely. In waste containment applications, however, conditions do not remain the same. The permeation [penetration] of a compacted clay liner by chemicals of many types is inevitable, since no compacted clay or any other type of liner material is either totally impervious or immune to chemical interactions of various types."

The 1992 study by Lee and Jones is an excellent resource for anyone wanting to understand why landfills always fail. In their footnotes, they cite 18 other studies of landfill problems that they themselves have authored, so their expertise is unquestionable, their information reliable, their arguments solid.

There has been sufficient scientific evidence available for a decade to convince any reasonable person that landfills leak poisons into our water supplies.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Landfill Leakage.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 508 - LANDFILLS.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of Landfills.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Landfill Basics

WHAT IS A LANDFILL?

A secure landfill is a carefully engineered depression in the ground (or built on top of the ground, resembling a football stadium) into which wastes are put. The aim is to avoid any hydraulic [water-related] connection between the wastes and the surrounding environment, particularly groundwater. Basically, a landfill is a bathtub in the ground; a double-lined landfill is one bathtub inside another. Bathtubs leak two ways: out the bottom or over the top.

WHAT IS THE COMPOSITION OF A LANDFILL?

There are four critical elements in a secure landfill: a bottom liner, a leachate collection system, a cover, and the natural hydrogeologic setting. The natural setting can be selected to minimize the possibility of wastes escaping to groundwater beneath a landfill. The three other elements must be engineered. Each of these elements is critical to success.

THE NATURAL HYDROGEOLOGIC SETTING:

You want the geology to do two contradictory things for you. To prevent the wastes from escaping, you want rocks as tight (waterproof) as possible. Yet if leakage occurs, you want the geology to be as simple as possible so you can easily predict where the wastes will go. Then you can put down wells and capture the escaped wastes by pumping. Fractured bedrock is highly undesirable beneath a landfill because the wastes cannot be located if they escape. Mines and quarries should be avoided because they frequently contact the groundwater.

WHAT IS A BOTTOM LINER?

It may be one or more layers of clay or a synthetic flexible membrane (or a combination of these). The liner effectively creates a bathtub in the ground. If the bottom liner fails, wastes will migrate directly into the environment. There are three types of liners: clay, plastic, and composite.

WHAT IS WRONG WITH A CLAY LINER?

Natural clay is often fractured and cracked. A mechanism called diffusion will move organic chemicals like benzene through a three-foot thick clay landfill liner in approximately five years. Some chemicals can degrade clay.

WHAT IS WRONG WITH A PLASTIC LINER?

The very best landfill liners today are made of a tough plastic film called high density polyethylene (HDPE). A number of household chemicals will degrade HDPE, permeating it (passing through it), making it lose its strength, softening it, or making it become brittle and crack. Not only will household chemicals, such as moth balls, degrade HDPE, but much more benign things can cause it to develop stress cracks, such as margarine, vinegar, ethyl alcohol (booze), shoe polish, peppermint oil, to name a few.

WHAT IS WRONG WITH COMPOSITE LINERS?

A Composite liner is a single liner made of two parts, a plastic liner and compacted soil (usually clay soil). Reports show that all plastic liners (also called Flexible Membrane Liners, or FMLs) will have some leaks. It is important to realize that all materials used as liners are at least slightly permeable to liquids or gases and a certain amount of permeation through liners should be expected. Additional leakage results from defects such as cracks, holes, and faulty seams. Studies show that a 10-acre landfill will have a leak rate somewhere between 0.2 and 10 gallons per day.

WHAT IS A LEACHATE COLLECTION SYSTEM?

Leachate is water that gets badly contaminated by contacting wastes. It seeps to the bottom of a landfill and is collected by a system of pipes. The bottom of the landfill is sloped; pipes laid along the bottom capture contaminated water and other fluid (leachate) as they accumulate. The pumped leachate is treated at a wastewater treatment plant (and the solids removed from the leachate during this step are returned to the landfill, or are sent to some other landfill). If leachate collection pipes clog up and leachate remains in the landfill, fluids can build up in the bathtub. The resulting liquid pressure becomes the main force driving waste out the bottom of the landfill when the bottom liner fails.

WHAT ARE SOME OF THE PROBLEMS WITH LEACHATE COLLECTION SYSTEMS?

Leachate collection systems can clog up in less than a decade. They fail in several known ways:

1. they clog up from silt or mud;
2. they can clog up because of growth of microorganisms in the pipes;
3. they can clog up because of a chemical reaction leading to the precipitation of minerals in the pipes; or
4. the pipes become weakened by chemical attack (acids, solvents, oxidizing agents, or corrosion) and may then be crushed by the tons of garbage piled on them.

WHAT IS A COVER?

A cover or cap is an umbrella over the landfill to keep water out (to prevent leachate formation). It will generally consist of several sloped

layers: clay or membrane liner (to prevent rain from intruding), overlain by a very permeable layer of sandy or gravelly soil (to promote rain runoff), overlain by topsoil in which vegetation can root (to stabilize the underlying layers of the cover). If the cover (cap) is not maintained, rain will enter the landfill resulting in buildup of leachate to the point where the bathtub overflows its sides and wastes enter the environment.

WHAT ARE THE PROBLEMS WITH COVERS?

Covers are vulnerable to attack from at least seven sources:

1. Erosion by natural weathering (rain, hail, snow, freeze-thaw cycles, and wind)
2. Vegetation, such as shrubs and trees that continually compete with grasses for available space, sending down roots that will relentlessly seek to penetrate the cover;
3. Burrowing or soil-dwelling mammals (woodchucks, mice, moles, voles), reptiles (snakes, tortoises), insects (ants, beetles), and worms will present constant threats to the integrity of the cover;
4. Sunlight (if any of these other natural agents should succeed in uncovering a portion of the umbrella) will dry out clay (permitting cracks to develop), or destroy membrane liners through the action of ultraviolet radiation;
5. Subsidence--an uneven cave-in of the cap caused by settling of wastes or organic decay of wastes, or by loss of liquids from landfilled drums--can result in cracks in clay or tears in membrane liners, or result in ponding on the surface, which can make a clay cap mushy or can subject the cap to freeze-thaw pressures;
6. Rubber tires, which "float" upward in a landfill; and
7. Human activities of many kinds.

QUESTIONS ABOUT LANDFILLS

It is important to have a basic understanding of a proposed landfill.

How big will the landfill be in acres?

What is the depth of the landfill in feet, and what will be the height of the highest point of the cap after the landfill is closed?

How much of the acreage will be filled with garbage?

How much of the acreage will be used for the buffer zone?

How much of the acreage will be unused?

What is the maximum tons per day they will accept?

Does the contract have a minimum tons per day quota (often called put or pay clauses)? If it does who is responsible for finding the additional tonnage or the money in lieu of the tonnage?

What type of garbage will it be filled with: municipal solid waste, medical waste, hazardous waste, low level radioactive waste, below

regulatory concern (brc) waste, special waste (often incinerator ash), incinerator ash, industrial solid waste, demolition debris, other waste?

Will they be putting recyclables in the landfill (glass, aluminum, tin, paper, etc.)?

Will they be putting clean organic compostables in the landfill (for example, yard wastes)?

If they are putting recyclables and organic compostables in the landfill will they be putting them in separate cells?

In tons per day, how much of the garbage will come from your town, county, state, out-of-state?

How many years will the landfill be in operation?

Federal Law requires all landfills to be lined. Will it be lined and capped? If so what will these be made of?

How long will the operators be responsible for it once it is closed, often referred to as the post-closure period?

Who will be responsible for it once the post-closure period is over?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Landfills.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 509 - LANDFILLS GENERATE METHANE GAS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Landfills Generate Methane Gas.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Landfills Generate large amounts of Methane Gas, enough that when the gas is used as a fuel for a methane generator to provide all the power needed to electrify the entire landfill at Marina, California and enough left over to sell at a profit.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of Landfills Generate Methane Gas.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

* 511 - NOISE CAUSING PERMANENT HEARING LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Noise causing Permanent Hearing Loss.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Ringin in the Ears
NIPTS, or noise induced permanent threshold shift, is just that -- the minimum level at which a person can perceive sound permanently shifts to a higher level. In layman's terms, a person incurs a permanent hearing loss of some degree. It is hypothesized that years of incurring a daily temporary threshold shift (TTS) may eventually lead to an NIPTS of similar magnitude.

"Sound pressure becomes damaging at about 75 dbA."
Living in The
Environment by G. Tyler Miller pg 320, Wadsworth
Publishing 1998

OSHA maximum noise level is 90 dBA.

Shouting in the ear can reach 110 dB. Scientific American July 2002

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

* 512 - TEMPORARY THRESHOLD SHIFT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Temporary Threshold Shift.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A temporary reduction in hearing acuity, which is referred to as
temporary threshold shift (TTS)

A temporary threshold shift is a common effect of noise on hearing in noisy industrial and entertainment situations. When an individual is tested for hearing acuity, an audiometer is used to establish the lowest levels of sound that person can perceive at different frequency bands. After exposure to high noise levels for a short time, or moderate noise levels over a long time, the minimum level that the person can perceive may shift to a higher level. Temporary shifts of 20 to 30 dB are usual in healthy ears in noisy situations with a typical eight-hour exposure. This shift is only temporary, however; a 100% recovery of the pre-noise exposure hearing acuity usually occurs within several hours. TTS is also known as "auditory fatigue."

"Sound pressure becomes damaging at about 75 dbA." Living in The Environment by G. Tyler Miller pg 320, Wadsworth Publishing 1998

Shouting in the ear can reach 110 dB. Scientific American July 2002

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of

Temporary Threshold Shift.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-
* 513 - NON-HEARING-LOSS NOISE HARM TO HUMAN HEALTH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Non-Hearing-Loss Noise Harm to Human Health.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

Annoying noise can cause "... stress, migraine headaches, gastric ulcers, insomnia, elevated blood pressure and psychological disorders including increased aggression." Living in The Environment by G. Tyler Miller pg 320, Wadsworth Publishing 1998

The World Health Organization asserts that noise exceeding 45 decibels can interfere with healthful sleep.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Non-Hearing-Loss Noise Harm to Human Health.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 514 - HIGH FREQUENCY ULTRASONIC NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
High Frequency Ultrasonic Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
High Frequency Ultrasonic Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 515 - LOW FREQUENCY INFRASOUND NOISE.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Low Frequency Infrasound Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

High Volume - Low Frequency Noise Human Harm

"The lower end of the audible acoustical spectrum is approximately 20 Hz. Below this frequency people cannot generally hear sound but can easily sense vibrations in their bodies. Intense sound in this frequency range can also excite resonances in various body cavities causing a feeling of nausea or discomfort. Intense infrasound can also cause walls and floors to vibrate, rattling windows and household items. The effects of this low frequency sound are discussed in this chapter."

"Low frequency sound can be directly absorbed through the surface of the body and can excite sense organs other than the ears. The effect is similar to the effect of mechanical vibration on the body, causing the internal organs to vibrate and disturbing the nervous system, digestion and sight. Very intense low frequency noise (0-20 Hz) can cause a sensation of vibration, disequilibrium, motion sickness, speech disturbance, and blurring of vision, just to name a few. Frequencies from 5-9 Hz have been shown to affect the liver, spleen, and stomach, while somewhat higher frequencies may result in mouth, throat, bladder or rectal pain."

"Workers in extremely noisy situations complain of distraction from nausea, disequilibrium, disorientation, headache, lassitude, and blurring of vision. French workers have reported disorders of the circulatory and nervous systems as a result of exposure to infrasound... Industrial equipment often produces inaudible vibrations which, after prolonged exposure, cause specific complaints of giddiness, nausea, and anxiety not found after similar exposure to noise in the audible range."
- AVIATION NOISE EFFECTS, FEDERAL AVIATION ADMINISTRATION, WASHINGTON, DC; MAR 1985, U.S. DEPARTMENT OF COMMERCE

"Whale Songs lengthen in response to Sonar." Nature, Vol 405 22 Jun 2000

"The Growler" is a mobile sound unit that emits such "unholy shrieks and roars" that every human being within a radius of ten city blocks is paralyzed with unbearable pain: they collapse in their tracks and curl up losing all control of their bowels and bleeding from the ears."
Scanlan's Monthly, June 1970

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Low Frequency Infrasound Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that

number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 516 - NOISE ANNOYANCE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Noise Annoyance.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Outdoor yearly levels on the Ldn [DNL] scale are sufficient to protect public health and welfare if they do not exceed 55 dBA in sensitive areas (residences, schools, and hospitals)." (EPA Publication #319, "Protective Noise Levels," 1978).

EPA describes 55 Ldn as a "significant noise impact." Hank Medwin, Past President, Acoustical Society of America.

".. 55 dB is the protective level, with a safety margin against annoyance." (Environmental Protection, Emil Chanlett 1979)

"U.S. Navy standards limit continuous exposure to shipboard noise to 60 dB." Scientific American, July 2002

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Noise Annoyance.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 517 - SPEECH INTERFERENCE LEVELS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Speech Interference Levels.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"One of the frustrating results of noise is the masking effect it produces in reducing the intelligibility of speech. For example, if the speaker and listener are separated by 5 feet, the levels of noise that will barely permit reliable word intelligibility are 50 decibels (dB) for normal conversation 57 dB for raised speech; 62 dB for very loud speech; and 69 dB for shouting." Van Nostrand's Scientific Encyclopedia, Fifth Edition 1976

"There appears to be a wide consensus that the most satisfactory spoken communication occurs when the speech-to-noise ratio exceeds 15 dB (the speech signal exceeds the background noise by 15 decibels). Since the strength of the unaided human voice is limited, ideal listening conditions are achieved by reducing the background environmental noise levels."

- From a paper presented 17 June 1997 to the Acoustical Society of America - America's Need for Standards and Guidelines to Ensure Satisfactory Classroom Acoustics at the 133rd Meeting of the ASA, State College, PA by David Lubman, Westminster, CA

EPA describes 55 Ldn as a "significant noise impact."
Hank Medwin, Past President, Acoustical Society of America.

Telephone conversation is difficult at 65 to 75 dB SIL.
A 45 dB SIL or lower is desirable for private offices and conference rooms. (Environmental Protection, Emil Chanlett 1979)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Speech Interference Levels.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 518 - ABSOLUTE NOISE LEVELS (55 DECIBELS IS TOO LOUD).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Absolute Noise levels (55 Decibels is Too Loud).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

EPA describes 55 Ldn as a "significant noise impact."

70 decibels is the sound level of a typical home vacuum cleaner.
- Living in the Environment pg 320

To protect against general annoyance, noise should not exceed 55 decibels. "...an Ldn of 70 is the protective level, with a safety margin, for permanent hearing impairment, and that 55 [decibels] is the protective level, with a safety margin against annoyance." - From Environmental Protection, pg 546, by Emil T. Chanlett, Professor, Department of Environmental Sciences and Engineering, School of Public Health, University of North Carolina, Chapel Hill.

HUD AND VA CRITERIA.

Both the Department of Housing and Urban Development and the Veterans' Administration have issued noise regulations. The purpose of the HUD regulations is to protect individuals from noise in their communities and places of residence. Basically, HUD policy states that HUD assistance is prohibited for projects with "Unacceptable" noise exposures (noise levels above 75 dB (DNL) and is discouraged for projects with "Normally Unacceptable" noise exposures (i.e. a noise level above 65 dB but under 75 dB). These noise levels take into account noise from highways, railroads and aircraft.

OSHA maximum noise level is 90 dBA.

The Veterans' Administration has also issued a series of statements of policy regarding noise and land use planning.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Absolute Noise levels (55 Decibels is Too Loud).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 519 - RELATIVE NOISE LEVEL INCREASE (10 DECIBEL INCREASE IS SIGNIFICANT).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Relative Noise Level increase (10 Decibel Increase is significant).

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

When there is a noise intrusion of 10dB, (i.e. $L_{dn} > 60dB$) one can expect "widespread complaints" and "threats of legal action." (Table 10 of von Gierke and Eldred, "Effects of Noise on People" Noise News/International, June 1993)

Relative noise impact can be measured by estimating how far away noise from the activity can be heard. In a city sometimes construction noise can even be drowned out, but in a rural area construction vehicles can be heard for miles.

Please prepare a map showing the maximum distance the noise can be heard during the day, and separately - during the night.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Relative Noise Level increase (10 Decibel Increase is significant).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 520 - NOISE CHARACTER (55 DECIBELS IS MUCH WORSE THAN 55 DECIBELS).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Noise Character (55 Decibels is much worse than 55 Decibels).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Two noises at the same decibel level are not equal in annoyance.
Fingernails on a chalkboard can be highly disturbing even when below 55 decibels.

When an object (e.g. aircraft or bullet) exceeds the speed of sound it causes a sonic boom, that can shake houses, scare people and humans.
"The booms alone would produce an environment with a composite noise rating of 101 to 115 dB. Experts offer the opinion that such exposures will result in strong complaints and legal action."
(Environmental Protection, Emil Chanlett 1979)

Very few people pay good money purely to listen to the sound of jet airplanes taking off at a sound level of 100 to 120 decibels. Yet

countless millions of people pay \$20 to \$100 to hear music concerts at 110 decibels. Living in the Environment pg 320.

The same is true at lower sound levels. Even when the decibel levels are equal, most people would find the noise of a chainsaw more annoying than the voice of their favorite person when both have the same sound level.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Noise Character (55 Decibels is much worse than 55 Decibels).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 521 - MAXIMUM NOISE VS. AVERAGE NOISE (CNEL OR LDN).

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Maximum Noise vs. Average Noise (CNEL or Ldn).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Damage is Not about Average Noise levels.

It is the loudest noises - the maximum noise levels, which do the most irreversible hearing damage.

Annoyance is Not about Average Noise

People do not often complain about noise at CNEL or Ldn levels as measured and mapped for General Plans.

People specifically complain about the loudest or "peak" noises -- those which significantly exceed CNEL and Ldn levels.

CNEL (Community Noise Equivalent Level) and Ldn (Level Day/Night) are average noise levels which do not recognize peak or maximum noise impacts.

Damaging and highly annoying noises unrecognized by CNEL or Ldn include impulse or short term noises such as dog barking, gun shots at a firing range, car horns, truck back up beepers, or aircraft overflights.

Renowned humorist and riverboat pilot Mark Twain once observed --

"I never cross a river when I only know its average depth is six inches."

Twain's comment vividly illustrates how the use of a bald average can drown you.

Why? Because CNEL and Ldn are average noise levels - not peak levels.

Ldn and CNEL also cannot distinguish between two otherwise similar neighborhoods where one endures short term loud ("impulse") noises such as dog barking, gunfire or car horns. This can also be due to using CNEL or Ldn instruments (i.e. analog) which cannot respond rapidly enough to detect short term noises.

CNEL and Ldn will not adequately recognize harmful and disturbing regular, predictable leaf blower, lawnmower or chainsaw noise - in part because those noises will most often occur when there is no CNEL or Ldn monitoring.

The California Courts agree:

In *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners of the City of Oakland*, 91 Cal.App.4th 1344 (2001), the First District Court of Appeal invalidated the Port of Oakland's certification of an EIR for the Airport Development Plan.

"The court found that the EIR had failed to adequately address the noise impacts from nighttime air cargo operations. Specifically, the court made clear that the EIR's reliance on the CNEL metric as the sole criterion to evaluate the significance of the project's noise impacts inappropriately excluded consideration of the potential sleep disturbance impacts on area residents resulting from nighttime flights. In reaching this conclusion, the court acknowledged the expert opinion that supported the need for this noise analysis, public concern about nighttime noise impacts, and the CEQA standards of significance, which recognize a site-sensitive threshold for evaluating noise impacts."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Maximum Noise vs. Average Noise (CNEL or Ldn).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 522 - MAXIMUM NOISE LEVEL (LMAX) MEASUREMENTS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Maximum Noise Level (Lmax) Measurements.

Damaging and highly annoying noises recognized by Lmax (Noise Level maximum) include impulse or short term noises such as dog barking, gun shots at a firing range, car horns, truck back up beepers, or aircraft overflights.

Lmax is easily measured by modern digital sound level meters with a recording function.

Please include noise contour maps of Lmax exceeding 45 dBA in the project area (along with any required CNEL maps).

* 523 - NOISE IMPACTS ON WILDLIFE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Noise Impacts on Wildlife.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Effects [of noise] on animals have not been studied extensively. These are analogous to those in humans. There is auditory loss which deprives the animal of signals of danger or the presence of prey. Animals depend on hearing in territorial stakeouts, courtship, mating. Noise which masks natural sounds can be detrimental to survival. Impulse noises produce startle, violent escape efforts, and panic. Noise around construction work, factories, and airports disrupt habitats. Such responses have caused injuries to domestic cattle and horses in stalls. Animals migrate from such conditions when an alternate area can be found." (Environmental Protection, Emil Chanlett 1979), citing "Effect of Noise on Wildlife and other Animals," EPA-NTID 300.5.J.Fletcher, 1971

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Noise Impacts on Wildlife.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 524 - ANIMALS ABANDONING NESTS AND HOMES DUE TO INCREASED NOISE AND DUST.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Animals Abandoning Nests and Homes Due to Increased Noise and Dust.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Animals Abandoning Nests and Homes Due to Increased Noise and Dust.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 525 - INCREASED TRAFFIC VOLUMES INCREASE TRAFFIC NOISE VOLUME.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased Traffic Volumes Increase Traffic Noise Volume.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Highway noise is dependent upon these factors:

- A) Traffic Volume - Noise goes up as volume increases.
 - B) Traffic Speeds - Noise increases as speed increases.
 - C) Number of Trucks - Noise goes up with a greater number of trucks.
- Federal Highway Administration. "Analysis of 23 CFR 772"

Measured noise levels according to the LEAGUE FOR THE HARD OF HEARING -
March 14, 2000: Heavy traffic 85 dBA

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Increased Traffic Volumes Increase Traffic Noise Volume.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 528 - MOTORCYCLE NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Motorcycle Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Motorcycles can cause noise as loud as 110 dbA. Effects of Noise on People, Eldred & von Gerike, Noise/News International, Vol 1, No. 2, 1993 June

Measured noise levels according to the LEAGUE FOR THE HARD OF HEARING -
March 14, 2000: Motorcycle 95 - 110 dbA

Motorcycles generate 85 dbA at 15 meters. Federal Register 39:121 p 22, 297 (Jun 21, 1974)

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Motorcycle Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 529 - BUS NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Bus Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Buses generate 82 dBA at 15 meters. Federal Register
39:121 p 22,297
(Jun 21, 1974)

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Bus Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 530 - CAR NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Car Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A car HORN can cause 110 dBA of noise. (LEAGUE FOR THE HARD OF HEARING - Updated March 14, 2000)

An automobile at 15 meters can cause noise as loud as 90 dbA. Effects of Noise on People, Eldred & von Gierke, Noise/News International, Vol 1, No. 2, 1993 June

Cars generate 69 dBA at 15 meters. Federal Register 39:121 p 22,297 (Jun 21, 1974)

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Car Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 531 - TRUCK NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Truck Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Highway noise is dependent upon these factors:
A) Traffic Volume - Noise increases as volume increases.
B) Traffic Speeds - Noise increases as speed increases.
C) Number of Trucks - Noise increases with a greater number of trucks.
-Federal Highway Administration. "Analysis of 23 CFR 772"

Highway noise is also dependent upon these factors:
D) Acceleration - Noise increases during acceleration.
E) Grade - Noise increases when ascending a hill.

A diesel truck accelerating at full throttle from 35 mph can generate
100 decibels at 100 hertz at 50 ft. Environmental Impact Analysis
Handbook, page 4-17.

A heavy truck at 15 meters can cause noise as loud as 89 dbA. Effects of
Noise on People, Eldred & von Gerike, Noise/News International, Vol 1,
No. 2, 1993 June

Truck Noise is significantly louder than typical traffic noise.
A heavy truck at 90 feet and 40 mph can make about 99 dbA of noise.
-Rosner, Hy and Joan., Albuquerque's Environmental Story, pgs 224, 225

A diesel truck going at 45 mph and 50 feet away will produce a noise
source of 84 dbA. -M.C. Branch, Outdoor Noise and the Metropolitan
Environment, L.A. Dept of City Planning, 1970

Trucks, heavy-medium generate 84 dBA. Federal Register
39:121 p 22,297
(Jun 21, 1974)

Post-project & other-project construction truck noise can be very loud.
Truck noise increases as they accelerate from a stop.
Truck noise increases as they whine uphill under load.

The threshold of significance should be whether an objectionable noise
can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Truck Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 532 - NON-TRUCK TRAFFIC NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Non-Truck Traffic Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Non-Truck Traffic Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 533 - DELIVERY VEHICLES NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Delivery Vehicles Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Delivery vehicles normally use diesel engines.
Delivery vehicles almost always leave their engines running.
Stopped, running Delivery vehicles have impacts from the exhaust, noise
and "parking" if you can call stopping-in-a-roadway - parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Delivery Vehicles Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 534 - CONSTRUCTION NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Noise.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Please provide a complete inventory of all noises made by construction including: vehicle noise and non-vehicle noise. Measured noise levels according to the LEAGUE FOR THE HARD OF HEARING - March 14, 2000: Pneumatic drills 120 dBA Jackhammer 130 dBA

Please state the ambient sound levels of the quietest areas. Please state the maximum number of hours per day of construction. Please state the maximum number of days until buildout.

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 535 - CONSTRUCTION VEHICLE NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Vehicle Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Vehicle Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 536 - CONSTRUCTION TRUCK NOISE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Construction Truck Noise.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Construction Truck Noise is notably louder than typical truck traffic. Backing trucks emit a loud annoying beeping which can be heard for miles in an otherwise quiet setting.

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Truck Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 537 - CONSTRUCTION HEAVY VEHICLE NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Heavy Vehicle Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Heavy Construction Vehicles including Bulldozers and Graders make unrestricted, unregulated noise.

Pneumatic Breakers can generate 111 dBA.
Pile Drivers can generate 105 dBA.
Bulldozers can generate 103 dBA.
Scrapers can generate 102 dBA.
Mobile Cranes can generate 102 dBA.
Pavers can generate 102 dBA.
Hydraulic Breakers can generate 100 dBA.
All in Leq from - Worker's Compensation Board of British Columbia,
Engineering Section Report, 1999

Bulldozers generate 87 dBA at 15 meters.
Scrapers generate 88 dBA at 15 meters.
All cited in the Federal Register 39:121 p 22,297 (Jun 21, 1974)

Heavy Trucks generate 88 dBA at 50 feet.
Backhoes generate 85 dBA at 50 feet.
Environmental Noise Pollution 1977, P. Cuniff

Bulldozers can generate 96 dBA
Cranes can generate 96 dBA
Earth Tampers can generate 96 dBA
Front-end loaders can generate 94 dBA
Gradealls can generate 94 dBA

Backhoes can generate 93 dBA
Cited as measured levels by The Center to Protect Workers Rights, 2003

What is the maximum number of Heavy Construction Vehicles to be allowed to operate at any one time?
What is the earliest hour (e.g. 9am) they will be allowed to operate?
Will they be allowed to operate on weekends?
Will they be allowed to operate during winter rains?

OSHA maximum noise level is 90 dBA.

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Heavy Vehicle Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 538 - CONSTRUCTION NON-VEHICLE NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction non-vehicle Noise.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Some construction activities (like Pile driving for bridges) cause excessive groundborne noise and vibration.

Pneumatic Tools generate 85 dBA at 50 feet.
Environmental Noise Pollution 1977, P. Cuniff

Pile drivers generate 101 dBA at 15 meters.
Rockdrills generate 98 dBA at 15 meters.
Scrapers generate 88 dBA at 15 meters.
Compressors generate 81 dBA at 15 meters.
All cited in the Federal Register 39:121 p 22,297 (Jun 21, 1974)

Shop tools (i.e. circular saw, router, drill, sander, grinder) can cause noise as loud as 110 dbA. Effects of Noise on People, Eldred & von Gerike, Noise/News International, Vol 1, No. 2, 1993 June

A hammer drill can cause 114 dBA.
A chainsaw can cause 109 dBA.
An impact wrench can cause 102 dBA.
A miter saw can cause 102 dBA.
A skill saw can cause 100 dBA.
A hand drill can cause 98 dBA.
A router can cause 95 dBA.
A planer can cause 94 dBA.
A belt sander can cause, 94 dBA.
A table saw can cause 93 dBA.

A circular sander can cause 90 dBA.
Decibel levels cited by NIOSH & CDC on their website.

Construction sites use loud (110 dBA at 15 feet) hydrocarbon (gasoline and diesel) power generators. MPWMD Safety Meeting Minutes Dec 22, 2000

OSHA maximum noise level is 90 dBA.

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction non-vehicle Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 539 - WOOD CHIPPING NOISE & AIR POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Wood Chipping Noise & Air Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Wood chippers can exceed 110 dbA. When gas powered they generate unregulated air pollution.

A wood chipper generated 96 dbA on Feb 20, 2004 measured by Herman Medwin Ph.D. (Past President, Acoustical Society of America.) It was operating across the street from his home in Pebble Beach, California.

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

County Noise ordinance 2450, Section 3 (Chapter 10.60.030) prohibits operating any device producing a noise level exceeding 85 dbA at 50 feet in the unincorporated county. Exempted are Aircraft and when more than 2,500 feet from an occupied dwelling. Misdemeanor, \$500 fine, 6 months in jail.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of
Wood Chipping Noise & Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 540 - CHAINSAW NOISE & AIR POLLUTION.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Chainsaw Noise & Air Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Measured noise levels according to the LEAGUE FOR THE HARD OF HEARING -
Garden Equipment and Power Tools Lawn mowers, leaf blowers, chain saws
and other power tools can be as loud as 130 dBA and pose a serious risk
to those who operate them.
A chainsaw can cause noise as loud as 130 dbA (LEAGUE FOR THE HARD OF
HEARING - March 14, 2000)

A chainsaw can cause noise as loud as 115 dbA. Effects of Noise on
People, Eldred & von Gerike, Noise/News International, Vol 1, No. 2,
1993 June

A chainsaw can cause noise as loud as 112 dbA Leq from -
Worker's
Compensation Board of British Columbia, Engineering
Section Report, 1999

Chainsaw noise is not merely loud, many people find its
particular noise
especially annoying. This noise is often even worse as they
are often
used in quiet places.

Chainsaws generate large amounts of unregulated air
pollution.

The threshold of significance should be whether an
objectionable noise
can be heard beyond the limits of the minimum land area of
its origin.

County Noise ordinance 2450, Section 3 (Chapter 10.60.030)
prohibits
operating any device producing a noise level exceeding 85
dBA at 50 feet
in the unincorporated county. Exempted are Aircraft and
when more than
2,500 feet from an occupied dwelling. Misdemeanor, \$500
fine, 6 months
in jail.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
Chainsaw Noise & Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is
measured or assumed.

25. Please state whether this total PERCENT maximum
change is an AVERAGE amount, a worst case expected or a
best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to
which the impact would raise or lower the baseline number
and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is
measured or assumed.

28. Please state whether this total maximum change amount
is an AVERAGE amount, a worst case expected or a best
case expected.

29. Please list all potential CUMULATIVE impacts related to
this one.

30 Please describe all potential CUMULATIVE impacts
related to this one.

31. Please quantify all potential CUMULATIVE impacts
related to this one.

32. Please list, describe and quantify all potential compound
and synergetic impacts.

33. Please list, describe and quantify all Construction
impacts related to this one.

34. Please list, describe and quantify all Growth impacts
related to this one.

35. Please list, describe and quantify all Indirect impacts
related to this one.

36. Please list and quantify every OTHER IMPACT - this
impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the
RESOURCE this impact affects.

38. Please state the METHOD of measurement used to
determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence
level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or
assumed.

41. Please quantify what is the maximum amount (in
AMOUNT of existing) of this resource that can be lost and
still be restored.

42. Please quantify what is the MAXIMUM amount (in
PERCENTAGE of existing) of this resource that can be
LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed
this impact.

44. Please cite each expert's training, and peer reviewed,
validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this
impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 541 - HAND-SAW.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Hand-Saw.

Compared with chainsaws - handsaws in normal use generate noise no louder than 52 dBA, they emit no air pollution and generate a fraction of the amount of sawdust.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each

measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 542 - AXE.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Axe.

A Hatchet and an Axe are alternatives to chainsaws.

Compared with chainsaws - they are rarely louder than 52 dBA, they emit no air pollution and generate a fraction of the amount of sawdust.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 543 - LANDSCAPING MACHINES.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Landscaping Machines.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Measured noise levels according to the LEAGUE FOR THE HARD OF HEARING - Garden equipment and power tools, lawn mowers, leaf blowers, chain saws and other power tools can be as loud as 130 dBA and pose a serious risk to those who operate them.

A power lawnmower can cause noise as loud as 95 dbA.
Effects of Noise on People, Eldred & von Gerike, Noise/News International, Vol 1, No. 2, 1993 June

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Landscaping Machines.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 544 - RIDING LAWN MOWER (GOLF COURSE).**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Riding Lawn Mower (Golf Course).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

A Toro Reelmaster 5100 D generated 76 dBA on June 4, 1994 at Pebble Beach Company's Spanish Bay Golf Course. (PBC DEIR, Feb 2004)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Riding Lawn Mower (Golf Course).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 545 - NATIVE TREE PLANTING TO REDUCE NOISE.**

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Native Tree Planting to Reduce Noise.

California Code 4799.07. The Legislature finds and declares that:

(e) Trees also help reduce noise, provide habitat for songbirds and other wildlife, reduce surface runoff and protect urban water resources, and enhance the aesthetic quality of life in the city.

-

*** 546 - PILE DRIVING DONE WITH A VIBRATOR.**

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Pile Driving done with a Vibrator.

A post can be driven into the ground when it is vibrated at its natural frequency greatly reducing noise and energy use. "Design of Design", Gordon Glegg, 1974

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

* 547 - NOISE BARRIERS.

Cal-Trans found that Sound walls create an unforeseen problem: The high frequency noise bounces off the wall, and people who live as far as a half mile away can suddenly hear zooming vehicles. -Castleman, "Now Hear This", Sierra Magazine

Noise barriers can easily cost \$220 per foot. Jim Esbaugh, Greiner Engineers, Albuquerque 1999.

It takes a 61 meter (190 foot) deep wall of dense vegetation to provide a 10 dbA decrease in road noise. -Federal Highway Administration

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Noise Barriers.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the
Primary mitigation measure:
Noise Barriers.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the
primary mitigation measure:
Noise Barriers.

using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the
primary mitigation measure: Noise Barriers.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Noise Barriers.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Noise Barriers.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSIs and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 548 - PROHIBIT CONSTRUCTION TRAFFIC BEFORE 9AM AND AFTER 4PM.

Switzerland prohibits heavy motor vehicle driving at nights and on Sundays.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:

Prohibit Construction Traffic before 9am and after 4pm.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Prohibit Construction Traffic before 9am and after 4pm. using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Prohibit Construction Traffic before 9am and after 4pm. using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Prohibit Construction Traffic before 9am and after 4pm.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibit Construction Traffic before 9am and after 4pm.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibit Construction Traffic before 9am and after 4pm.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-
* 549 - TRUCKS USING JAKE BRAKES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Trucks Using Jake Brakes.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Eighteen wheel trucks have an additional form a braking called "Jake Brakes" which uses engine braking instead of wheel braking. It creates a loud, deep bubbling noise that is prohibited in many communities. These brakes are normally to prevent speed buildup when descending any kind of road.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of

Trucks Using Jake Brakes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 550 - JAKE BRAKE PROHIBITION AND PENALTIES.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Jake Brake Prohibition and Penalties.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Jake Brake Prohibition and Penalties.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Jake Brake Prohibition and Penalties.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Jake Brake Prohibition and Penalties.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Jake Brake Prohibition and Penalties.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Jake Brake Prohibition and Penalties.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be

fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 551 - AIR HORN USE PROHIBITION AND PENALTIES.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:

Air Horn Use Prohibition and Penalties.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1. Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the

Primary mitigation measure:

Air Horn Use Prohibition and Penalties.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the
primary mitigation measure:
Air Horn Use Prohibition and Penalties.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

R. What will it cost, in time and money, to replace the loss from the impact?

* 552 - GENERATOR NOISE IN QUIET AREAS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Generator Noise in Quiet Areas.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Many people choose to live in rural areas because of the quiet.
Electric generators can damage that quiet for 24 hours a day (all night long) and 365 days a year (including all holidays). Electrical generators are often found just beyond the end of electrical grid power delivery lines.

Generators can create loud (110 dBA at 15 feet) hydrocarbon (gasoline and diesel) power generators. MPWMD Safety Meeting Minutes Dec 22, 2000

The threshold of significance should be whether an objectionable noise can be heard beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Generator Noise in Quiet Areas.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 553 - BIRDS GENERAL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Birds General.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

There are about 8600 bird species recognized as of 1961 (Encyc p 76) divided into 27 (Wetmore), 28 (Mayr & Amadon) or 51 (Stresemann) orders.

Birds play essential ecological roles as pollinators of flowers, dispersing seeds, and controlling insects.

Ranges of individual species are ordinarily sharply delimited. Encyclopedia of Biological Sciences, P. Gray, McGraw-Hill 1961

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Birds General.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 554 - BIRD SONGS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Bird Songs.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Bird songs are lost when songbird habitat is destroyed or degraded.
Almost any native forest overflows with bird songs, especially at
dawn and dusk. Urban areas - even urban parks almost never experience
the rich range of bird songs found in wild areas.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Bird Songs.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 555 - CALIFORNIA CONDOR (GYMNOGYPS CALIFORNIANUS).

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on
California Condor (*Gymnogyps californianus*).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a State and Federally listed Endangered species. Its range includes all of California. Monterey County is well within the range of this species. It roosts in large old trees including Redwood, Douglas fir and Monterey pine. Condors fly up to 15,000 feet above sea level.

Monterey County Range
In 1981 only 22 - 27 California condors were alive.
At their lowest ebb only 13 male and 14 female Condor's remained alive.
Condors were extirpated in Monterey County for 25 years but returned in 1996. Condors have been observed roosting in large Monterey pines (radiata) near Jacks Peak and flying at the mouth of Carmel Valley in 1998.

Condors feed on deer which are frequently killed on local roads and highways. The Condors could be killed feeding on the proposed freeway's roadkill.

The Condor declined in part because of lead poisoning. The Condors eat animals which have been shot with lead bullets.

Seven Condors have been killed in power line collisions since captive bred condors were released to the wild in 1992.

At least one condor died as a result of drinking water containing antifreeze.

The Condor declined in part because of DDT.

Many Ranches in Monterey County performed "Cattle Dipping" prior to the 1960's in which cows were led through a trench filled with DDT and Toxaphene. These areas are now hazardous waste sites. Markham Ranch is one example

"DDT is being preserved in soils all over California."
"DDT has been found in moderate to high concentrations in the Salinas River and lower Moss Landing watershed for many years."
DDT in the Salinas Valley, 1986, California Water Resources Control Board Report # 86-2-WQ.

Moss Landing Harbor has high concentrations of DDT in its harbor bottom which is now being stirred up by dredging.

The Pajaro River, bordering Monterey and Santa Cruz Counties, has high levels of DDT.

The lower fifty (50) miles of the Salinas River (Hydro Unit # 309.100) is on the US EPA's CWA 303(d) list for Pesticide contamination exceeding TMDL limits. The pesticides come from Agriculture, Irrigated Crop production, Agriculture-storm runoff, Agriculture-irrigation tailwater, Agriculture Return flows, and non-point source pollution.

In 1996 2,193 fish consumption advisories were issued in 48 states.
Mercury, PCBs, chlordane, dioxin and DDT were responsible for almost all fish consumption advisories in 1996. -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore.
"Predatory organisms at the top of the food web generally have higher mercury concentrations." Mercury Study Report to Congress Dec 1997

None of this should come as a surprise to the US-EPA because DDT is still in use worldwide and to some degree in the U.S - in spite of the so-called "ban." Up to 15% of a pesticide can be DDT which is still allowed by EPA and FIFRA as an "impurity" in insecticides including chlorobenilate and dicofol. (Living in the Environment, G Tyler Miller pg 627)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Condor (*Gymnogyps californianus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 556 - CALIFORNIA CONDOR (GYMNOGYPS CALIFORNIANUS) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
California Condor (*Gymnogyps californianus*) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Condor (*Gymnogyps californianus*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 557 - BALD EAGLES (HALIAEETUS LEUCOCEPHALUS).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Bald Eagles (*Haliaeetus leucocephalus*).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species and was state and federally listed as Endangered. Its range includes all of California. Monterey County is well within the range of this species. It was extirpated in Monterey County for 60 years but returned in 1986. There were once nesting pairs in Lafler & Torre Canyons in Big Sur in the 1930s. It was extirpated in Monterey County for 60 years but returned in 1986. "A single subadult was observed at Moore's Lake on Rancho San Carlos in 1991." Rancho San Carlos FEIR pg 11-25 1995 They are often observed roosting at Point Lobos State Park. Eagles fly up to 15,000 feet above sea level.

The Bald Eagle declined because of DDT. In 1940, the Bald Eagle Protection Act was passed. This law made it illegal to kill, harm, harass, or possess bald eagles, alive or dead, including eggs, feathers and nests. However, the decline continued until DDT was banned from use in the United States on December 31, 1972.

Many Ranches in Monterey County performed "Cattle Dipping" prior to the 1960's in which cows were led through a trench filled with DDT and Toxaphene. These areas are now hazardous waste sites. Markham Ranch is one example

Moss Landing Harbor has high concentrations of DDT in its harbor bottom which is now being stirred up by dredging.

The Pajaro River, bordering Monterey and Santa Cruz Counties, has high levels of DDT. (Pajaro River Management Plan 1999)

In 1996 2,193 fish consumption advisories were issued in 48 states. Mercury, PCBs, chlordane, dioxin and DDT were responsible for almost all fish consumption advisories in 1996. -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore. "Predatory organisms at the top of the food web generally have higher mercury concentrations." Mercury Study Report to Congress Dec 1997

None of this should come as a surprise to the US-EPA because DDT is still in use worldwide and to some degree in the U.S. - in spite of the so-called "ban." Up to 15% of a pesticide can be DDT which is still allowed by EPA and FIFRA as an "impurity" in insecticides including chlorobenilate and dicofol. (Living in the Environment, G Tyler Miller pg 627)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Bald Eagles (*Haliaeetus leucocephalus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it

vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 558 - BALD EAGLES (HALIAEETUS LEUCOCEPHALUS) HABITAT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Bald Eagles (Haliaeetus leucocephalus) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Bald Eagles (Haliaeetus leucocephalus) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.	37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.	QUANTIFICATION OF BASELINES AND IMPACTS:
16. Please quantify the length of time this impact would last.	38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.	This impact appears to be potentially significant.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.	39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.	1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Golden Eagle (Aquila chrysaetos).
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.	40. Please state whether the margin of error is measured or assumed.	1b. If no objective criteria are used please state that clearly.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.	41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.	2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
20a. Please state whether this MARGIN of ERROR is measured or assumed.	42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.	3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
20b. If no margin of error is used please state that clearly.	43. Please name each EXPERT who prepared and reviewed this impact.	3b. Please quote the definition used.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.	44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.	4. If no measurement units are used please state that clearly.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.	45. Please provide AVOIDANCE MITIGATION for this impact.	5a. Please state the METHOD of measurement used to determine the significance for each criteria.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	46. Please provide the reverse of this impact as Mitigation.	5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
24. Please state whether the MARGIN of ERROR is measured or assumed.	47. Please provide an ALTERNATIVE which avoids this impact.	6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.	48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.	7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	* 559 - GOLDEN EAGLE (AQUILA CHRYSAETOS).	8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
27. Please state whether the MARGIN of ERROR is measured or assumed.	The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Golden Eagle (Aquila chrysaetos).	9. Please state the variance's MARGINS of ERROR or confidence level.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.	If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.	10. Please state whether this MARGIN of ERROR is measured or assumed.
29. Please list all potential CUMULATIVE impacts related to this one.	This species is listed as "fully protected" in California by CDF&G and is a Species of Special Concern.	11. If an average is used, please state which kind of average.
30 Please describe all potential CUMULATIVE impacts related to this one.	This bird inhabits grassland and savanna habitats in hilly and mountainous terrain. Their population declines are due in part to loss of habitat from urban and agricultural development.	12. Please state the most extreme values which could be encountered.
31. Please quantify all potential CUMULATIVE impacts related to this one.	A family nests in and near Point Lobos State park.	13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
32. Please list, describe and quantify all potential compound and synergetic impacts.	One was observed in 1994 flying above San Juan Rd in Carmel Woods heading towards Jeffers' forest in Pebble Beach.	14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
33. Please list, describe and quantify all Construction impacts related to this one.	A pair were observed regularly in 1990 near the end of Pesante road.	15. Please provide a graph of HISTORICAL measurements.
34. Please list, describe and quantify all Growth impacts related to this one.	A pair nest regularly on Elkhorn Ranch near Elkhorn Slough.	16. Please quantify the length of time this impact would last.
35. Please list, describe and quantify all Indirect impacts related to this one.	An Adult and two juveniles were observed roosting in oak trees on the Rancho San Juan project site in August 1995. Ideal foraging habitat is present throughout Monterey County annual grasslands.	17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.		18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
		19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
		20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 561 - MARBLED MURRELET (BRACHYRAMPHUS MARMORATUS).

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on
Marbled Murrelet (*Brachyramphus marmoratus*).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a California listed Endangered species and a Federally listed
Threatened species. Monterey County includes the southern end of the
range of this species. It is also protected from "take" by the
Migratory
Bird Treaty Act.

HOME
It nests in trees up to 150 in height.

NUMBERS

"Population numbers are difficult to estimate for this enigmatic bird,
but there are probably about 1,000 birds in the [Monterey Bay]
population." MBNMS Ecosystem Observations, 2001

LOCATION

"The Santa Cruz Mountains Zone extends from the mouth of San Francisco
Bay to Point Sur, Monterey County. It includes waters within 2
kilometers of the Pacific Ocean shoreline, the waters of Monterey bay,
and extends inland a distance of up to 24 kilometers from the Pacific
Ocean shoreline. Because this population is small and isolated from
other Marbled Murrelet populations, it is considered to be especially
vulnerable. Marbled Murrelet probably once nested on the Monterey County
Coast from south of Carmel through Big Sur. In addition, numbers of
Marbled Murrelets are found in Monterey Bay during the winter."

The first Marbled Murrelet was seen in the Santa Cruz Mountains in 1974.
In 1997? some were found "near Pt. Piedras Blancas" near the southern
Monterey County line. MBNMS Ecosystem Observations, 2001

THREATS

"Marbled Murrelets have been killed by gill nets" (US-FWS MM Recovery
Plan 1997). "Even very small oil spills have resulted in the death of
large numbers of, perhaps large proportions of local populations, of
Marbled Murrelets. Smaller incidents of oil discharge, such as those
associated with the cleaning of bilges and oil tanks at sea, can
cumulatively result in significant mortality to Marbled Murrelets."

"The loss of nesting habitat appears to be the primary cause of marbled
murrelet population declines in Washington, Oregon and California. The
low reproductive potential of this species, and the lack of knowledge
concerning its ability to locate and reestablish new nesting areas
after elimination of nesting habitat, makes it imperative to maintain
all occupied nesting habitat." - MM Recovery Plan 1997 (FWS ?)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Marbled Murrelet (*Brachyramphus marmoratus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 562 - MARBLED MURRELET (BRACHYRAMPHUS MARMORATUS) HABITAT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Marbled Murrelet (Brachyramphus marmoratus) Habitat.

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Marbled Murrelet (*Brachyramphus marmoratus*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 563 - NORTHERN SPOTTED OWL (*STRIX OCCIDENTALIS CAURINA*).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Northern Spotted Owl (*Strix occidentalis caurina*).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species. Monterey County includes the southern end of the range of this species. They are known to nest, roost and feed in a variety of different kinds of forest. Most observations of spotted owl habitat use have been made in mature old-growth forests. (US-FWS Dec 1992)

The red tree vole is a primary food source for the Spotted Owl.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Northern Spotted Owl (*Strix occidentalis caurina*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

*** 565 - CALIFORNIA SPOTTED OWL (STRIX OCCIDENTALIS).**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
California Spotted Owl (*Strix occidentalis*).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a Species of Special Concern.
"The spotted owl, a very rare species elsewhere in the west is fairly common in old growth forests in Big Sur." The Natural History of Big Sur, Henson & Usner, 1993 UC Press. In 1991 three probable breeding pairs were detected in, among other places, Van Winkley's Canyon, Williams Canyon and along lower San Clemente Creek; unmated males were found along upper San Jose Creek and along Potrero Creek. Rancho San Carlos FEIR pg 11-30 1995 Spotted Owls have been documented foraging around the upper fringes of the Arroyo Seco Campground. (Forest Service ltr to FHWA Aug 9 1994)

There are about 30 nesting pairs of Spotted Owls in Monterey County as of 2003. -SPCA Press release, Nov 2003

The red tree vole is a primary food source for the Spotted Owl.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Spotted Owl (*Strix occidentalis*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 566 - CALIFORNIA SPOTTED OWL (STRIX OCCIDENTALIS) HABITAT.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
California Spotted Owl (*Strix occidentalis*) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Spotted Owl (*Strix occidentalis*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 567 - GREAT GRAY OWL (*STRIX NEBULOSA*).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Great Gray Owl (*Strix nebulosa*).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a California listed Endangered species.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Great Gray Owl (*Strix nebulosa*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.
 10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
 45. Please provide AVOIDANCE MITIGATION for this impact.
 46. Please provide the reverse of this impact as Mitigation.
 47. Please provide an ALTERNATIVE which avoids this impact.
 48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.
- ENDANGERED SPECIES**
This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.
- SPECIES RANGE**
1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg 4-16/4-17.
- LOCAL OBSERVATIONS**
2. Please provide a map of this species' habitat, local to the project.
 3. Please identify all recent observations of the species on the local habitat map.
 4. Please describe whether the population(s) affected by this project is a source or a sink population.
- HABITAT TYPES AND RANGE**
5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.
6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.
- MINIMUM VIABLE POPULATION**
7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.
8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.
9. What margin of error do these numbers have?
10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.
- VULNERABILITY AND THREATS**
11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).
12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).
- ONSITE HABITAT SIZE & QUALITY**
13. Please quantify and describe the species maximum potential onsite habitat size in acres.
14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.
15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.
16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.
- FOOD CHAIN**
17. Please describe and quantify the food chain for this species
18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be

impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 568 - GREAT GRAY OWL (STRIX NEBULOSA) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Great Gray Owl (Strix nebulosa) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Great Gray Owl (Strix nebulosa) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 569 - ELF OWL (MICRATHENE WHITNEYI).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Elf Owl (Micrathene whitneyi).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a California listed Endangered species.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Elf Owl (Micrathene whitneyi).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 570 - ELF OWL (MICRATHENE WHITNEYI) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Elf Owl (*Microathene whitneyi*) Habitat.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Elf Owl (*Microathene whitneyi*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 571 - WESTERN SNOWY PLOVER (CHARADRIUS ALEXANDRINUS NIVOSUS).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Western Snowy Plover (*Charadrius alexandrinus nivosus*).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species as of March 5 1993 (58 FFR 12864) . Monterey County is well within its range. "Fewer than 1500 breeding birds remain on the Pacific Coast." "There are only 20 nesting sites left in California." FWS, 1998

They nest on sandy beaches including Point Sur, Carmel River mouth, Asilomar Beach, near Monterey Beach Hotel, the Naval Postgraduate School, Salinas River mouth, Pajaro River mouth, in the salt drying ponds in Elkhorn Slough.

Predators include unleashed dogs, development, Peregrine Falcons, Shrikes, Horses, Raccoons, cats, red foxes. Critical habitat was designated by FWS on Dec 7 1999 for the beaches at Point Sur, Seaside & Monterey Salinas River mouth, Pajaro River mouth, and the salt drying ponds in Elkhorn Slough.

The Western Snowy Plover is "known to exist in Pacific Grove, approximately one mile from the project site." DEIR, Rohr Hotel, 1983, Citing California Natural Diversity Database, 1981

"In winter the number of Snowies in Monterey County swells to about 300 birds (... 80 in the Monterey Dunes from Del Monte Beach to Asilomar Beach and the Carmel River Mouth)." Monterey County Breeding Bird Atlas, 1993

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Western Snowy Plover (*Charadrius alexandrinus nivosus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is

a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and

losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 572 - WESTERN SNOWY PLOVER (CHARADRIUS ALEXANDRINUS NIVOSUS) HABITAT.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Western Snowy Plover (*Charadrius alexandrinus nivosus*) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Western Snowy Plover (*Charadrius alexandrinus nivosus*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 575 - WESTERN GOSHAWK.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Western Goshawk.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This species was federally listed during a 90 day rule. Monterey County is well within its range. They nest in old growth forests.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Western Goshawk.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 576 - WESTERN GOSHAWK HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Western Goshawk Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Western Goshawk Habitat.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 577 - AMERICAN PEREGRINE FALCON (FALCO PEREGRINUS ANATUM).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
American Peregrine Falcon (Falco peregrinus anatum).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a State listed Endangered species. It was listed and Federally
until 1999. It is specially protected under California Law: Calif
Fish &
Game Code 3503.5.

"It is unlawful to take, possess, or destroy any birds in the orders
Falconiformes or Strigiformes (birds-of-prey) or to take, possess, or
destroy the nest or eggs of any such bird except as
otherwise provided
by this code or any regulation adopted pursuant thereto."

In 1970 there were only ten pairs known (20 birds) in the
entire U.S.
This is a severe genetic bottleneck.

Its range includes coastal Monterey County. Monterey County is well within the range of this species. It formerly nested throughout California, primarily along the coast and around the Channel Islands.
They occur near marshes, lakes, and rivers that support an abundance of birds (to prey upon). Coastal and Inland marsh habitats are especially important in fall and winter, when they attract large concentrations of water birds.

A pair have been observed hunting from the tower near the Monterey Bay Aquarium in 1999.
A pair may be nesting at the Embassy Suites in Seaside in Dec 1999.

There are about 7 non-migratory pairs living in Monterey County in 2004.

It likes protected ledges, caves and potholes on cliffs for nesting.
It prefers cliffs that overlook rivers, lakes or the ocean.
It nests along the Big Sur coastline. (near Hurricane Pt.)
It is a regular winter visitor at Elkhorn Slough and Lake San Antonio.
-Salinas Valley Saltwater Intrusion Project DEIR/S Technical Appendices

Dec 1990 A single individual was observed in 1991 at Rancho San Carlos.
Rancho San Carlos FEIR pg 11-25 1995

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
American Peregrine Falcon (Falco peregrinus anatum).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20a. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
 45. Please provide AVOIDANCE MITIGATION for this impact.
 46. Please provide the reverse of this impact as Mitigation.
 47. Please provide an ALTERNATIVE which avoids this impact.
 48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.
- ENDANGERED SPECIES**
This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.
- SPECIES RANGE**
1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.
- LOCAL OBSERVATIONS**
2. Please provide a map of this species' habitat, local to the project.
3. Please identify all recent observations of the species on the local habitat map.
 4. Please describe whether the population(s) affected by this project is a source or a sink population.
- HABITAT TYPES AND RANGE**
5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.
6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.
- MINIMUM VIABLE POPULATION**
7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.
8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.
9. What margin of error do these numbers have?
10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.
- VULNERABILITY AND THREATS**
11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).
12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).
- ONSITE HABITAT SIZE & QUALITY**
13. Please quantify and describe the species maximum potential onsite habitat size in acres.
14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.
15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.
16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.
- FOOD CHAIN**
17. Please describe and quantify the food chain for this species
18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 578 - AMERICAN PEREGRINE FALCON (FALCO PEREGRINUS ANATUM) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
American Peregrine Falcon (Falco peregrinus anatum)
Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
American Peregrine Falcon (Falco peregrinus anatum)
Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 579 - CALIFORNIA BROWN PELICAN (PELECANUS OCCIDENTALIS CALIFORNICUS).**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on

California Brown Pelican (*Pelecanus occidentalis californicus*).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a State and Federally listed Endangered species. Monterey County is well within its range. It is also protected under the Marine Mammal Protection Act. Its habitat includes the near shore waters and air of California. A large roost has been established at Moss Landing. Nests occur at Point Lobos.

The Pelican declined because of DDT harming among other things its eggs.

Many Ranches in Monterey County performed "Cattle Dipping" prior to the 1960's in which cows were led through a trench filled with DDT and Toxaphene. These areas are now hazardous waste sites. Markham Ranch is one example

Moss Landing Harbor has high concentrations of DDT in its harbor bottom which is now being stirred up by dredging. Pelicans roost at Moss Landing.

The Pajaro River, bordering Monterey and Santa Cruz Counties, has high levels of DDT.

In 1996 2,193 fish consumption advisories were issued in 48 states. Mercury, PCBs, chlordane, dioxin and DDT were responsible for almost all fish consumption advisories in 1996. -EPA Administrator, Carol Browner and Secretary, Dept of Agriculture Dan Glickman Feb 14th 1998 in Report called the "Clean Water Action Plan" to Vice President Al Gore. "Predatory organisms at the top of the food web generally have higher mercury concentrations." Mercury Study Report to Congress Dec 1997

None of this should come as a surprise to the US-EPA because DDT is still in use worldwide and to some degree in the U.S. - in spite of the so-called "ban." Up to 15% of a pesticide can be DDT which is still allowed by EPA and FIFRA as an "impurity" in insecticides including chlorobenilate and dicofol. (Living in the Environment, G Tyler Miller pg 627)

California Brown Pelicans are particularly susceptible to oil spills because of their natural attraction to oil slicks. Some experts theorize the Pelicans think the shiny slicks are schools of fish and plunge right

in. Herald, Jun 15, 00

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Brown Pelican (*Pelecanus occidentalis californicus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

-
* 580 - CALIFORNIA BROWN PELICAN (PELECANUS OCCIDENTALIS CALIFORNICUS) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on California Brown Pelican (Pelecanus occidentalis californicus) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Brown Pelican (Pelecanus occidentalis californicus) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 581 - LEAST BELL'S VIREO (VIREO BELLII PUSILLUS).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Least Bell's Vireo (Vireo bellii pusillus).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a State and Federally listed Endangered species. Its northern range includes Monterey County. It nests in riparian areas with dense willow thickets. It has been observed nesting along the Salinas River near Bradley.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Least Bell's Vireo (Vireo bellii pusillus).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

* 583 - SWAINSON'S HAWK (BUTEO SWAINSONI).

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on
Swainson's Hawk (Buteo swainsoni).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a California listed Threatened species.
An estimated 20,000 Swainson's Hawk's were killed in Argentina in 1995/1996 after eating grasshoppers contaminated with the OP monocrotophos. Leg bands indicated the birds came from the US and Canada. "Disrupting the Balance" 1999 pg 40

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Swainson's Hawk (Buteo swainsoni).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the

equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 584 - SWAINSON'S HAWK (BUTEO SWAINSONI) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Swainson's Hawk (Buteo swainsoni) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Swainson's Hawk (Buteo swainsoni) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 585 - CALIFORNIA CLAPPER RAIL(RALLUS LONGIROSTRIS OBSOLETE??).

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on California Clapper Rail(Rallus Longirostris Obsolete??).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This bird is Federally and California listed as Endangered. Its range includes Monterey County.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Clapper Rail(Rallus Longirostris Obsolete??).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Bank Swallow (*Riparia riparia*).

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

This is a California listed Threatened species. For breeding they can
use vertical banks and cliffs with fine-textured soils near streams,
rivers, lakes, or the ocean.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Bank Swallow (*Riparia riparia*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

* 589 - BANK SWALLOW (*RIPARIA RIPARIA*).

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 590 - BANK SWALLOW (RIPARIA RIPARIA) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Bank Swallow (Riparia riparia) Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Bank Swallow (Riparia riparia) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 591 - (SOUTHWESTERN) WILLOW FLYCATCHER (EMPIDONAX TRAILLII EXTIMUS).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
(Southwestern) Willow Flycatcher (Empidonax traillii extimus).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Endangered species as of 3-29-95
This is a California listed Endangered species. Its habitat includes California riparian areas, especially those dominated by willows. It was observed nesting near Spreckels from 1969 to 1972 and at the Carmel River mouth in 1974 "Good habitat remains from at least Bradley to the San Luis Obispo County line." Monterey County Breeding Bird Atlas, 1993

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on (Southwestern) Willow Flycatcher (*Empidonax traillii extimus*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 595 - COOPER'S HAWK (ACCIPTER COOPERI).

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on
Cooper's Hawk (Accipter cooperi).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This bird is listed as a Species of Special Concern by CDFG. It breeds in oak woodlands and deciduous riparian areas. It was observed on Aug 30 1995 in the Salinas Valley.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Cooper's Hawk (Accipter cooperi).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 596 - COOPER'S HAWK (ACCIPITER COOPERI) HABITAT.**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on Cooper's Hawk (Accipiter cooperi) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Cooper's Hawk (Accipiter cooperi) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

*** 597 - FERRUGINOUS HAWK (BUTEO REGALIS).**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on Ferruginous Hawk (Buteo regalís).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This bird is listed as a Species of Special Concern by CDFG. it winters

in arid and semi-arid areas of California. Two were observed roosting on the Rancho San Juan project site on August 31 1995. Grasslands of that site provide ideal winter foraging habitat for the species.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Ferruginous Hawk (*Buteo regalis*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

* 600 - MERLIN (FALCO COLUMBARIUS) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Merlin (Falco columbarius) Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Merlin (Falco columbarius) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 601 - GREAT HORNED OWL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Great Horned Owl.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A breeding pair of Great Horned Owls need about 2 square kilometers of
habitat. (Breeding Bird Atlas of Monterey County, 1993)
At least one pair lives in Jeffers' forest in Pescadero Canyon in Pebble
Beach.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Great Horned Owl.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 602 - GREAT HORNED OWL HABITAT.**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on Great Horned Owl Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 607 - LONG LEGGED BAT (MYOTIS VOLANS).**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of

Long legged bat (Myotis volans).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Federal Watch list.

California Species of Special Concern.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Long legged bat (Myotis volans).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 608 - FRINGED BAT (MYOTIS THYSANODES).**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of

Fringed Bat (Myotis thysanodes).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Federal Watch list. California Species of Special Concern.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Fringed Bat (*Myotis thysanodes*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 613 - ARTHROPODS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Arthropods.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Temperate Forest soil and litter layers may contain the greatest numbers of species and densities of arthropods in the world." A square yard of undisturbed forest soil can contain 250 species of beetles, flies, bugs, mites, millipedes, centipedes and sow bugs."
"The Status and Trends of Our Nation's Biological Resources" by USGS

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Arthropods.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 614 - SMITH'S BLUE BUTTERFLY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Smith's Blue Butterfly.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Endangered species since June 1 1976 (41 FR 22044). (*Euphilotes enoptes smithi*) Monterey County lies within the center of the natural range of this species. Monterey County is well within the range of this species. It has been found at the mouth of the Salinas River. Critical Habitat had not been designated as of March 1999.

This butterfly is a subspecies found in some 25 localities within the coastal fog belt of Monterey and Santa Cruz Counties. It is found almost exclusively on two species of wild buckwheat: *Eriogonum latifolium* (Coast Buckwheat), which occurs on coastal sand dunes and bluffs, and *E. parvifolium* (Seacliff Buckwheat), which occurs on dunes, bluffs, and chapparal-covered hillsides away from the immediate coast.

-Salinas Valley Saltwater Intrusion Project DEIR/S Technical Appendices
Dec 1990

"One of these two plant species must be present for Smith's Blue Butterfly to occur in Coastal Dun habitat." FWS Biological Opinion for Former Fort Ord, March 1999.

The butterflies lay their eggs exclusively in the buckwheat species mentioned above.

The Smith's Blue Butterfly is a weakly flying species and long distance dispersal is believed to occur only rarely. They have been observed dispersing up to a few hundred yards at Fort Ord and at Marina State Beach. FWS Biological Opinion for Former Fort Ord, March 1999.

THREATS

"Freeway building and urbanization have destroyed roughly 50 percent of the original dunes." The butterfly only lives for about a week, needs areas sheltered from winds. The population is active from early June to September. Most fly less than 200 feet from where their lives began as eggs. Roadways are barriers that may isolate their colonies from each other. Highway 1 in Sand City, built right through the middle of critical butterfly habitat, creates one such barrier. Cars traveling at 65 miles per hour pose a lethal threat. - Monterey Dunes History Assoc Newsletter, Summer 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Smith's Blue Butterfly.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a

specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 615 - SMITH'S BLUE BUTTERFLY HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Smith's Blue Butterfly Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Smith's Blue Butterfly Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 616 - BAY CHECKERSPOT BUTTERFLY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Bay Checkerspot Butterfly.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species which lives in Monterey County.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Bay Checkerspot Butterfly.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies

do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 617 - BAY CHECKERSPOT BUTTERFLY HABITAT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Bay Checkerspot Butterfly Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Bay Checkerspot Butterfly Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.
 10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 - 30 Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
 45. Please provide AVOIDANCE MITIGATION for this impact.
 46. Please provide the reverse of this impact as Mitigation.
 47. Please provide an ALTERNATIVE which avoids this impact.
 48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 618 - MONARCH BUTTERFLY (DANAUS PLEXIPPUS).
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Monarch Butterfly (Danaus plexippus).
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Monarch Butterfly (Danaus plexippus) is a California Department of Fish and Game species of special concern. Monarch migration is designated a "Threatened Natural Phenomenon" by the International Union for the Conservation of Nature and natural Resources.
- The USDA prohibits shipping Monarchs across the Continental Divide to keep the populations separate.
- The Monarch is specifically protected in the City of Pacific Grove, CA with a \$500 fine for killing one.
- It migrates from the Pacific Northwest to the central Mexico highlands roosting in Monterey Pine forests in Pacific Grove and Santa Cruz along the way. They eat milkweed (Asclepias sp.) which makes them toxic to birds.
- Uncontrolled Oyamel pine forest wood cutting west of Mexico city is endangering critical Monarch Butterfly habitat.
- Monarch caterpillars can be killed by the pollen from Monsanto's bioengineered "Bt corn ." Scientific American Aug 99 pg 28
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Monarch Butterfly (Danaus plexippus).
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 620 - BEES.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Bees.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

There are some 3,500 bee species in the U.S. Bees pollinate at least 95 crops in the U.S with a value of some \$10 billion per year.

"There are some 1500 species of bees in California and some 200 to 250 species in Carmel Valley. Solitary bees make up the majority of the bee family. Bee populations are suffering from widespread use of pesticides and conversion of land to urban or agricultural use. Drought makes their populations drop precipitously." Gordon Frankie, UC Berkeley Entomologist and conservation biologist with the Division of Insect Biology.

"Insecticides can kill bees outright or it can be carried back to the hive where it can kill the brood bees or adult bees." Eric Mussen, UC Davis Entomology Department.

"Honeybees are beneficial insects that are particularly vulnerable to insecticides." Environmental Science; Morgan, Moran & Weirsm; W.C. Brown Pub. 1993 p 178

Most bee foraging occurs within 2 - 3 miles of the hive, but can be up to 5 miles during times of pollen or nectar shortages.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Bees.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

* 622 - HAY OR STRAW BALES USED TO REDUCE STREAM SILTATION.

Reducing Stream Siltation with Hay or Straw Bales can prevent fish passage.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Hay or Straw Bales used to Reduce Stream Siltation.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Hay or Straw Bales used to Reduce Stream Siltation. using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Hay or Straw Bales used to Reduce Stream Siltation. using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Hay or Straw Bales used to Reduce Stream Siltation.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the

mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Hay or Straw Bales used to Reduce Stream Siltation.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Hay or Straw Bales used to Reduce Stream Siltation.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 623 - WEST COAST STEELHEAD (ONCORHYNCHUS MYKISS).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
West Coast Steelhead (*Oncorhynchus mykiss*).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This species was Federally listed as Threatened and Endangered on August 18 1997 [62 FR 43937]. Monterey County is well within the range of this species. Its range includes all rivers and most streams in Monterey

County including the Big Sur River, Salinas River, Carmel River, Potrero Creek, Robinson Canyon Creek, Garzas Creek, San Clemente Creek, San Jose Creek.

Steelhead typically spawn and rear in the headwaters and tributaries of rivers, rather than in the mainstems. The ability of steelhead to access networks of smaller tributaries at higher elevations is far more important than having a steady flow in a single low elevation, mainstem channel that is urbanized and channelized with simplified habitat.

What percentage of the late-rearing juvenile habitats are above the proposed dam?

Steelhead are extremely sensitive to water temperature, both too hot and too cold. "Influences of Forest and Rangeland Management on Salmonid Fishes and Their Habitats", William R. Meehan, Editor, U.S. DoA 1991

Starting with 11,500 steelhead "Fish mortality was high (99% of the first group, and 93% of the second batch died) as long as summer water temperatures remained above 70 degrees Fahrenheit." The Monterey Peninsula Water Management District Sleepy Hollow Workshop Nov 25 1997
MPWMD Board Packet April 19 1999.

Steelhead are easily killed by *Ichthyophthirius* and *Flexibacter columnaris*, especially when water temperatures exceed 70 degrees.

"Infectious salmon anemia (ISA) is an incurable disease caused by a virus that seems to mutate easily. Crowded fish-farm conditions facilitate the spread of the disease. ISA has been found in Atlantic salmon raised in both Atlantic and Pacific Coast fish-farms. ISA has caused millions of dollars of losses in Norway, Scotland and New Brunswick, Canada, where entire fish stocks had to be destroyed to prevent further spread of the infection." EIJ Spring 2000

Steelhead can be killed by stress from handling for a rearing facility or handling for a trap and truck operation.

Please quantify these potential deaths.

Steelhead in rearing facilities can be eaten by birds. In 1999 some 8,000 steelhead were eaten by Merganser Ducks in the Carmel River Monterey Peninsula Water Management District rearing facility.

Please quantify these potential deaths and their rate.

Electrofishing to rescue steelhead can kill the California Red-Legged Frogs and tadpoles (*Rana aurora draytonii*).

Please quantify potential deaths from Electrofishing and their rate.

Known endocrine disruptors include nonylphenols. OSF, p 217
Nonylphenol Ethoxylates deteriorate rainbow trout gills, yet are

classified as an "inert" ingredient in Quick Wipes and Bug Guard
Anti-Insect Paint. -Western Environmental Law Update, Spring 2000

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on West Coast Steelhead (*Oncorhynchus mykiss*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

*** 624 - WEST COAST STEELHEAD (ONCORHYNCHUS MYKISS) HABITAT.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on West Coast Steelhead (Oncorhynchus mykiss) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on West Coast Steelhead (Oncorhynchus mykiss) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 625 - TIDEWATER GOBY (EUCYCLOGOBIUS NEWBERRYI).**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Tidewater Goby (eucyclogobius newberryi).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Endangered species. Monterey County lies within the center of the natural range of the Tidewater Goby. Monterey County is well within the range of this species. It was collected from the Salinas River lagoon in 1946 and 1951. The Goby can live 8 km upstream of lagoon or estuary according to Irwin and Soltz (1984).

It could inhabit any of the watersheds this project drain into.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance on Tidewater Goby (*eucyclogobius newberryi*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 627 - VERNAL POOL FAIRY SHRIMP (BRANCHINECTA LYNCHI).

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the project's potential impacts on
Vernal Pool Fairy Shrimp (Branchinecta lynchi).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species.
Its range includes the vernal pools of Monterey County.
Ft. Ord has several vernal pools containing Vernal Pool Fairy Shrimp.

Vernal Pool Fairy Shrimp might live in the vernal pools in the proposed driving range area.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Vernal Pool Fairy Shrimp (Branchinecta lynchi).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the

equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 628 - VERNAL POOL FAIRY SHRIMP (BRANCHINECTA LYNCHI) HABITAT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Vernal Pool Fairy Shrimp (Branchinecta lynchi) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Vernal Pool Fairy Shrimp (Branchinecta lynchi) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 629 - AMPHIBIANS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Amphibians.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The world's frogs, toads and other amphibians are vanishing, and the decline began decades before scientists first sounded the alarm in the 1980s, according to the biggest statistical study of the topic.

The findings, published in Apr 13 2000 issue of the journal Nature, were compiled by a University of Ottawa researcher, using Internet contacts with some 200 scientists around the world.

Data on 936 populations of amphibians and 157 species came in from 37 countries and eight regions of the world.

Trends varied by time and place. In Western Europe, a sharp decline in the early 1960s leveled off later. In North America, the decline was slower, but steady.

The loss of amphibians causes a large increase in flies and mosquitos.

Since amphibians can easily absorb dangerous chemicals including pesticides, nitrites and nitrates through their permeable skin, they represent sensitive indicators of environmental stress.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Amphibians.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 630 - CALIFORNIA RED-LEGGED FROG (RANA AURORA DRAYTONII).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on

California Red-Legged Frog (*Rana aurora draytonii*).

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

This is a Federally listed Threatened species as of May 23 1996 (61 FR 25813). Monterey County is well within the range of this species.

Mark Twain became famous when he wrote an account of a jumping frog contest in Calaveras County. Those Celebrated Frogs of Mark Twain's article, the red-legged frogs, as the only large native frogs in California, were undoubtedly the contestants in that event.

This native California frog ("CRLF") is now gone from the Sierras including Calaveras County, but it still hangs on in a very few places. One of those few places is the Rancho San Carlos project site. When the Frogs were listed as an endangered species the federal government made it clear that this project site is one of only three places left in the world where significant populations of Mark Twain's frogs still live.

DRY-LAND TRAVELERS
California Red-Legged frogs (CRLF) have been documented as moving as much as two miles (3.2 km) from aquatic sites "without regard for topography." Federal Register Sept, 11, 2000, pg 54894

(The following is quoted from the US Fish & Wildlife Service - "Guidance on Site assessment and Field surveys for California red-legged frogs, Appendix - California red-legged frog ecology and distribution." Dated February 18, 1997.

"Movement California red-legged frog may move up to 1.6 km (ONE MILE) UP OR DOWN A DRAINAGE and are known to wander throughout riparian woodlands up to several dozen meters from the water. On rainy nights California red-legged frog may ROAM AWAY FROM AQUATIC SITES AS MUCH AS 1.6 KM (ONE MILE). California red-legged frog will often move away from the water after the first winter rains, causing sites where California red-legged frog were easily observed in the summer months to appear devoid of this species."

According to the USFWS Biological Opinion on nearby Rancho San Carlos (dated September 6, 1996) the - "California red-legged frog could inhabit any aquatic and riparian areas within the range of the species and also any landscape features near riparian areas that provide cover and moisture."

"Any aquatic and riparian areas within the range of the species"

The Federal Register ESA Listing of the Frog expands on and gives additional examples of Frog habitat. "California red-legged frogs have been found up to 30 m (98 feet) from water in adjacent dense riparian vegetation for up to 77 days."

"Estivation habitat is essential for the survival of California red-legged frogs within a watershed."

"Estivation habitat for the California red-legged frog is potentially all aquatic and riparian areas within the range of the species and includes any landscape features that provide cover and moisture during the dry season within 300 feet of a riparian area. This could include boulders or rocks and organic debris such as downed trees or logs; industrial debris; and agricultural features, such as drains, watering troughs, spring boxes, abandoned sheds, or hay-ricks. Incised stream channels with portions narrower than 18 inches and depths greater than 18 inches may also provide estivation habitat." (From the Federal Register for Thursday, May 23, 1996)

THESE FROGS CAN LIVE WITHOUT PONDS OR WETLANDS
A US-FWS letter to Monterey County in Mar 1998 on the "September Ranch" FEIR states "Concluding the CRLF does not occur on the project site because the site does not have ponds or other wetland habitat with riparian vegetation is erroneous because this species exhibits complex temporal variations in behavior and habitat use."

CALIFORNIA RED-LEGGED FROG HABITAT MAP NEEDED
Since the California Red-Legged Frog can range up to a mile in any direction from aquatic sites that makes a circle two miles in diameter as potential habitat for the frog from each known aquatic location within its range.

Please prepare a Meaningful Map of all Potential Habitat
Since California Red-Legged frog can "roam away from aquatic sites as much as 1.6 km", a complete map of potential California Red-Legged frog habitat for the project site is needed to determine which areas potentially contain California Red-legged frog habitat.

Bullfrogs are predators of the California Red-Legged Frog. As weak swimmers bullfrogs are susceptible to being washed out of a river into the ocean as opposed to the California Red-Legged Frog which can avoid high natural, temporary flows by leaving the stream. Other CRLF predators include crayfish and centrarchid fishes as well as herons, egrets, opossums and raccoons. "Trash left during or after project activities could attract predators such as raccoons to work sites which in turn could harass or prey on the listed species." US-FWS Biological Opinion on Arroyo Seco Bridge Replacement. April 27 1999

Diet

"Invertebrates are the most common food item for adults. Larvae probably eat algae. Vertebrates, such as the Pacific Tree frogs and California mice (*Peromyscus californicus*), represented over half the prey mass eaten by larger frogs."

Hazards

"Accidental spills of hazardous materials or careless fueling or oiling of vehicles or equipment could degrade water quality or upland habitat to a degree where CRLF are adversely affected or killed." The contamination of the stream by wet concrete could cause potential skin and respiratory system irritation in CRLFs. Work in live streams or in floodplains could cause unusually high levels of siltation downstream. This siltation could alter the quality of habitat downstream and preclude its use by CRLF." US-FWS Biological Opinion on Arroyo Seco Bridge Replacement. April 27 1999

Nitrite and Nitrate hazards

Oregon State University researchers "have named the nitrogen based compounds found in fertilizers as likely suspects in the rapid decline of at least one frog species in the Pacific Northwest."

The maximum recommended nitrite limit for drinking water, 1 milligram per liter, was sufficient to kill well over half of the Oregon spotted frog tadpoles and about half of the northwestern salamander tadpoles.

Nitrate compounds can be readily converted to nitrites through a number of environmental processes including bacteria.

Please Consult with Fish and Wildlife Service and the California Dept of Fish and Game.

LOCATIONS

CRLF are abundant in the Carmel River watershed according to studies done for The Monterey Peninsula Water Management District.

Numerous breeding CRLF have been found in Pebble Beach in Seal Rock Creek, in the drainage east of Cypress Point Golf Course, and adjacent to and on water hazards of Spyglass Golf course (2002-2003). PBC DEIR 2004

One CRLF was observed in Hatton Canyon, A tributary of the Carmel River, by a CalTrans Biologist in 1996.

"[They] have been observed at an impoundment near the end of Pesante Road, approximately 1.25 miles north of the site and in a marsh west of Prunedale." -Rancho San Juan project ADC Specific Plan Draft Program EIR pg 5-52 The Prunedale Bypass EIS/EIR indicated that this species was present along the Alternative 4 alignment.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Red-Legged Frog (*Rana aurora draytonii*).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it

vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 631 - CALIFORNIA RED-LEGGED FROG (RANA AURORA DRAYTONII) HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on California Red-Legged Frog (*Rana aurora draytonii*) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on California Red-Legged Frog (*Rana aurora draytonii*) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
- * 632 - SOUTHWESTERN POND TURTLE (CLEMMYS MARMAROTA).
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Southwestern Pond Turtle (Clemmys marmorata).
- If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.
- This turtle originally inhabited most Pacific drainages in California from the Oregon to Mexico borders. The species has been separated into two subspecies (C.m. marmorata is the northwestern subspecies and C.m. pallida is the southwestern subspecies), both of which are listed as Category 2 Candidate by US-FWS and as a CDFG Species of Special Concern.
- This species was observed at three ponds on Rancho San Carlos on several occasions in 1991. Rancho San Carlos FEIR pg 11-25 1995
- Their predators could include introduced fish, wild boar and bullfrogs.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
- Southwestern Pond Turtle (Clemmys marmorata).
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

*** 634 - SANTA CRUZ LONG-TOED SALAMANDER.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Santa Cruz Long-Toed Salamander.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

This is a State and federally listed Endangered species. (Ambystoma macrodactylum croceum) Monterey County is within the southern end of its range. It is found on the northeastern edge of Moro Cojo Slough, in Coastal woodland and chaparral near ponds and freshwater marshes. They frequent coastal woodlands and chaparral near ponds and freshwater marshes (CDF&G 1980).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Santa Cruz Long-Toed Salamander.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 635 - SANTA CRUZ LONG-TOED SALAMANDER HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Santa Cruz Long-Toed Salamander Habitat.

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Santa Cruz Long-Toed Salamander Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 636 - CALIFORNIA VEGETATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of California Vegetation.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"California is extraordinarily rich in native plant species with 5,057 representative vascular plants. Of these, 1,525 or 30% are endemic to California."

"The diversity of plant life in California is also very high. Of the major plant types identified in the contiguous 48 states in 1964, California holds one-fourth of all those types."

"The plant species in California are under constant threat from urbanization, agriculture, forest destruction, and water pollution."
"It has been calculated that more than 25 species are already extinct in the wild, more than 150 species are endangered, and some 280 species threatened. Calculations indicate that one-fourth of all threatened and endangered plant of the U.S. are located in California."
- California an Environmental Atlas and Guide, Bern Kreissman, 1991

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of California Vegetation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 637 - VEGETATION REMOVAL INCREASING FLOODING.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Vegetation Removal Increasing Flooding.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Vegetation slows runoff flow, allowing more water to infiltrate the soil
reducing flooding.
Overgrazing, deforestation and surface mining "are notorious for removing
vegetative cover and contributing to the hazard of floods."
Environmental Science; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993,468

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Vegetation Removal Increasing Flooding.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 640 - PACIFIC GROVE CLOVER (TRIFOLIUM POLYODON).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Pacific Grove Clover (Trifolium polyodon).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This is a Federal Species of concern. It is California listed as Rare. Its habitat includes native Monterey Pine forest, especially on the Monterey Peninsula.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Pacific Grove Clover (Trifolium polyodon).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 641 - PACIFIC GROVE CLOVER (TRIFOLIUM POLYODON) HABITAT.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impact on Pacific Grove Clover (Trifolium polyodon) Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Pacific Grove Clover (Trifolium polyodon) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 642 - HICKMAN'S POTENTILLA OR CINQUEFOIL (POTENTILLA HICKMANII).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Hickman's Potentilla or Cinquefoil (Potentilla Hickmanii).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

This is a Federally (as of September 11, 1998) and California listed
Endangered species . Monterey County is well within the range of this
species. Its habitat includes native Monterey pine forest. One observed
location in Monterey Co is Indian Village in Pebble Beach.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Hickman's Potentilla or Cinquefoil (Potentilla Hickmanii).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

We request that the Federal Register (or state equivalent) announcement of the listing of this species, and where the species is state listed the equivalent state public notice, be made a part of this review and considered.

ENDANGERED SPECIES

This project site appears to meet all three US-FWS criteria indicating the potential to find the species or its habitat on the project site.

SPECIES RANGE

1. Please provide a map of this species geographic range. Please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16/4-17.

LOCAL OBSERVATIONS

2. Please provide a map of this species' habitat, local to the project.

3. Please identify all recent observations of the species on the local habitat map.

4. Please describe whether the population(s) affected by this project is a source or a sink population.

HABITAT TYPES AND RANGE

5. Please provide a comprehensive description of all of the species' known habitats, including foraging and migration habitats.

6. Please provide a comprehensive description of the maximum distance the species has been observed from known nesting, breeding and foraging habitats.

MINIMUM VIABLE POPULATION

7. Please describe the size of land area needed to sustain a single breeding pair (or an asexual individual) of this species for 100 years.

8. Please describe the number of individual breeding pairs (or individuals) needed to sustain a minimum viable population for 100 years.

9. What margin of error do these numbers have?

10. Please describe the size of land area needed to sustain a minimum viable population for 10 generations of this species.

VULNERABILITY AND THREATS

11. Please describe all characteristics of this species which make it vulnerable to extinction (e.g. specialized feeding habits, limited or specialized distribution, occupies top trophic levels, low reproductive potential, or hunted for commercial products).

12. Please identify, quantify and describe all major, moderate and potential threats to the species, in order of priority, which can limit the carrying capacity and population productivity factors for this species (e.g. loss of habitat, pesticides).

ONSITE HABITAT SIZE & QUALITY

13. Please quantify and describe the species maximum potential onsite habitat size in acres.

14. Please quantify the size of the species habitat which could be potentially lost in acres both permanently and temporarily.

15. Please quantify the number of individuals of this species which could potentially be lost and which impacts could cause each loss.

16. Please describe the qualities of each area of the habitats which could be lost, and which specific impacts could cause each loss.

FOOD CHAIN

17. Please describe and quantify the food chain for this species

18. Please discuss whether the listed species is a generalist or a specialist which only eats one species of food and if that food will be impacted by the activity.

19. Please describe and quantify the potential impacts, decrease and losses of the species' food chain due to the project.

PREDATORS

20. Please describe and quantify the potential impacts, declines and losses of the listed species from predators of the species which may be assisted by the project.

BIODIVERSITY

21. Please quantify and describe the existing Genetic Biodiversity for this species. Please quantify the existing genetic breadth using the number of variants of this species' Microsatellite DNA. If such studies do not exist please state this clearly.

22. Please quantify the potential reduction in size of the genetic variants in this species' Microsatellite DNA.

23. Please analyze and quantify the potential genetic bottleneck impacts on this species from this project.

24. Please quantify the potential reduction in size of the Species' Genetic Biodiversity due to this project.

25. Please quantify the Species' existing non-genetic Biodiversity.

26. Please quantify and describe the existing Ecosystem Biodiversity this species inhabits.

27. Please quantify and describe the potential reduction in size of the Species' Biodiversity due to this project.

* 643 - HICKMAN'S POTENTILLA OR CINQUEFOIL (POTENTILLA HICKMANII) HABITAT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the project's potential impacts on Hickman's Potentilla or Cinquefoil (Potentilla Hickmanii) Habitat.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Hickman's Potentilla or Cinquefoil (Potentilla Hickmanii) Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 644 - YADON'S (REIN ORCHID) PIPERIA (PIPERIA YADONII).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Yadon's (Rein Orchid) Piperia (Piperia yadonii).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
