Comments on -- Proposed Pebble Beach Golf Course And Mansions Project Which Would Destroy Vital Imperiled Monterey Pine Forest; Revised Draft Environmental Impact Report Remains Monstrously Defective and Colossally Legally Inadequate

Hello Mr. McCue,

We now feel less certain you genuinely care about our environment because of the new DEIR which ignored significant comments from the Coastal Commission, Department of Fish and Game, and Fish & Wildlife Service. Due to the actual environmental impacts of the project even with the mitigations proposed,

**we must seriously object to the project and the Draft Environmental Impact Report
and its facade of a revision for failing to recognize dozens and dozens of potentially significant environmental impacts,
AND for your refusal to respond to the substantial comments from state and federal resource agencies and us.**

What a waste of everyone's time. If this document were honestly prepared as minimally required by law, and as outlined by the Coastal Commission staff, there would be nothing to challenge in court and the project could be legally approved and begin soon. However by your actions as of today you are forcing us to prepare for court and forcing the applicant to delay the project for years.

MANY REAL IMPACTS EVADED

If instead of evading them, the proposed actions' significant environmental impacts were reasonably analyzed using the best available science the inappropriately glowing conclusions of the environmental review are simply not credible because of the much greater genuine impacts.

AN OUNCE OF PREVENTION IS WORTH A POUND OF CURE.

"If you can't replace something, then you'd better preserve it." David Brower, Let the Mountains Talk, Let the Rivers Run, 1995

IRREVERSIBLE HARM REQUIRES PRECAUTIONARY PRINCIPLE

The Passenger Pigeon is gone forever from our planet. Americans not only recklessly killed millions of them, not for consumption - just for sport, we caused their extinction.

Developers, and to a large degree government agencies, consider environmental impacts as only a problem to find loopholes around. They typically trivialize environmental impacts no matter how much evidence exists with "There is no incontrovertible proof yet."

Yet when economic interests are threatened "We shouldn't wait for a full-blown disaster before we act." Bill Pauli, California Farm Bureau President, January 2000 demanding an aggressive campaign to stop the glassy winged sharpshooter insect bearing Pierce's disease. Some people understand the Precautionary Principle only when they want to.

They know much of physics, and most environmental science, is less than a 100% certainty, so they knowingly demand an impossible standard of proof so they can keep making money as long as possible while the environmental damage they are causing grows.

Their position is equivalent to having smoke pouring out of a house and they stop you from calling the fire department until

you can prove it is on fire - that you can see flames is not good enough.

American culture provides overwhelming examples of how irresponsible it is to wait until all harmful effects of a project are even 60% certain. Environmental damage may be irreversible or impossible to mitigate.

Causing a human's death is irreversible and 100% impossible to mitigate.

Causing a wild animal or plant to go extinct is irreversible and 100% impossible to mitigate. Humans have caused numerous species to go extinct and are forcing thousands more to the brink of extinction.

As a society we have decided we will not wait for 100% certainty when it comes to prohibiting or limiting the use of poisons including radiation and pesticides.

California's Environmental Quality Act (CEQA) specifically recognizes this need for precautionary policy in defining a "Significant effect on the environment" as a "POTENTIALLY" substantial, adverse change in the environment - not as merely a "CERTAIN" environmental harm. (Sec. 21068)

Rachel's Environment and Health Weekly #586 reports: "An international group of scientists, government officials, lawyers, and labor and grass-roots environmental activists met January 23-25, 1998 at Wingspread in Racine, Wisconsin to define and discuss the precautionary principle. After meeting for two days, the group issued the following consensus statement:

"Wingspread Statement on the Precautionary Principle

"The release and use of toxic substances, the exploitation of resources, and physical alterations of the environment have had substantial unintended consequences affecting human health and the environment. Some of these concerns are high rates of learning deficiencies, asthma, cancer, birth defects and species extinctions, along with global climate

change, stratospheric ozone depletion and worldwide contamination with toxic substances and nuclear materials.

"We believe existing environmental regulations and other decisions, particularly those based on risk assessment, have failed to protect adequately human health and the environment - the larger system of which humans are but a part.

"We believe there is compelling evidence that damage to humans and the worldwide environment is of such magnitude and seriousness that new principles for conducting human activities are necessary.

"While we realize that human activities may involve hazards, people must proceed more carefully than has been the case in recent history. Corporations, government entities, organizations, communities, scientists and other individuals must adopt a precautionary approach to all human endeavors.

'Therefore, it is necessary to implement the Precautionary Principle: When an activity raises threats of harm to human health or the environment, precautionary measures should be taken even if some cause and effect relationships are not fully established scientifically. In this context the proponent of an activity, rather than the public, should bear the burden of proof.

"The process of applying the Precautionary Principle must be open, informed and democratic and must include potentially affected parties. It must also involve an examination of the full range of alternatives, including no action." [End of statement.]"

PREDETERMINED CONCLUSIONS

Unfortunately this environmental impact analysis reflects the principle "most government planning is the systematic collection of evidence to justify predetermined conclusions." (Jim Britell, "The Myth of Planning")

Forest Ecology

Founded in 1998, H.O.P.E. is a non-profit, tax deductible, public interest group protecting our Monterey Peninsula's natural land, air, and water ecosystems and public participation in government, using science, law, education, news alerts and advocacy.

Printed On 35% Post-Consumer Recovered Fiber.

The environmental documentation is seriously incomplete and ignores many clear environmental damages. This prevents a full and fair evaluation of the environmental consequences of this project by the public and decisionmakers.

"The people of this State do not yield their sovereignty to the agencies which serve them. The people, in delegating authority, do not give their public servants the right to decide what is good for the people to know and what is not good for them to know.

The people insist on remaining informed so that they may retain control over the instruments they have created."

California Government Code Section 54950 - the Ralph M. Brown Act.

After years of reviewing hundreds of Environmental Impact Assessments I can state I have yet to see a single EIR, EIA or EIS that meets the MINIMUM legally required. Frankly we're disgusted and angry with the typical avoidance of compliance with CEQA law and intent.

We're not alone. The Public, the California Bar Association and many environmental professionals decry the abysmal lack of environmental protection and the typical Agency use of CEQA loopholes to avoid disclosing potentially harmful environmental impacts.

As experts in many scientific fields related to environmental impacts and the law governing them, we are all too familiar with the typical agency standard for Environmental Review Documents which include huge doses of faulty or embarrassingly out-of-date science, environmental and biological illiteracy, twisted logic and intentionally risky legal conclusions to hide environmental damage. We find much CEQA avoidance originates in intentionally vague environmental review.

Because of the typical slipshod and ambiguous scientific and technical misconduct of Environmental Review preparation and to revive the rigor intended and expected from CEQA we have compiled -

1) a broad and specific factual basis of genuine environmental impacts; and

2) a list of standard questions to reveal the factual basis (or lack of a factual basis) of the document's conclusions.

Evidence Summaries are Inadequate.

"An expert who relies on a summary of data or facts, by definition relies upon the underlying data and the facts which form the basis for the summary." *Marsee v United States Tobacco*, 866 F.2d 319, 323 (10 Cir 1989)

This following larger than usual list of questions is needed because

1) Environmental Review is formal discourse, and
2) Agencies often do not deal in good faith and almost always raise a "Failure to Exhaust Administrative Remedies" defense when sued.

We find such a legal defense by an agency inherently bogus and poetically ironic since - 1) Courts hold agencies up as experts on environmental impacts (in spite of overwhelming evidence to the contrary) and 2) that the intent of CEQA is to prevent agencies from avoiding disclosure of environmental impacts.

It stands to reason that if an Agency is held up as expert AND the Agency failed to tell us about an impact - there is no other conclusion available except that they were either incompetent or intentionally hiding impacts. In either case the courts have held that agencies shall be legally liable for a failure to look for or disclose potential environmental harm.

We cannot ignore the potential for an agency to raise a "Failure to Exhaust Administrative Remedies" so in order to Exhaust our Administrative Remedies we are obligated to ask these questions about the fundamental basis of the conclusions asserted.

AGENCY EXPERTS - AREN'T

Governing Magazine Editorial "The fact of the matter is that many local governments do lack the expertise they need to administer land-use laws competently and fairly." Jonathon Walters, May 2000

"[Consulting Geologist Lew] Rosenberg also believes geologic information is not properly used by [Monterey] County Planning Department, which relies on its own staff to review reports rather than on registered geologists. 'The popular belief is that this would be too expensive,' Rosenberg said. 'However, if only one house or road were saved from damage, then using a geologist would more than pay for itself.'" -Herald Oct 15 1999 Front Page "Mapping out the Big One"

We intend to make it abundantly clear that it is irresponsible to consider Lead Agency staff or the EIR Authors as experts in any field of environmental impact or that they have really considered all environmental impacts until they can prove otherwise by answering each of our questions substantively, thoroughly, and meaningfully.

Responsible environmental review consultants and agency staff have welcomed our questions. Reckless environmental review consultants and agency staff have ignored our questions and facts increasing the risks of the Lead Agency losing litigation.

Our expertise is demonstrated by the inclusion of the best available science and specific facts all backed up by explicit citations relevant to the environmental impacts we raise. EIRs rarely provide such rigor.

CEQA OVERVIEW

A 1991 Association of (San Francisco) Bay Area Governments study found a "poor relationship between the environmental review and the ultimate project decision."

The California State Bar Association convened a CEQA Review Committee in 1994-1995. They concluded that the lack of standards for thresholds of significance was a problem stating:

"Many CEQA documents do not state [the thresholds used to make impact significance determinations]. If thresholds are not explicitly stated, it is difficult for the public to comment meaningfully on decisions to prepare a negative declaration instead of an EIR, or to comment on a particular significance determination."

The State Bar also found "the need for clarification regarding specificity, enforceability, feasibility, effectiveness and monitoring."

The U.S. EPA studied 1200 Environmental Assessments and Findings of No Significant Impact (FONSI)s and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

FACT BASED ANALYSIS OF BENEFITS, IMPACTS, MITIGATIONS & ALTERNATIVES

The following specific questions are intended to assist the public and decisionmakers by helping reveal the objective basis (or lack of) for the conclusions reached by your environmental document.

Superficial Science is Inadequate

The environmental document needs factual evidence to show how the benefits, or purposes, can be achieved, how the impacts were measured, how the mitigation benefit and Alternatives were evaluated. The document assumes that it is self evident that the benefits will be achieved, the Alternatives won't provide them, that impacts are insignificant and Mitigations are magical cures for everything. As is often said "The road ... is paved with good intentions."

However, the law requires conclusions be based on facts - not assumptions or opinions. Our California Supreme Court

wrote "[We can not] countenance a result that would require blind trust by the public." *Laurel Heights v UC*, 47 Cal.3d 376

CEQA Section 21080(e)

"Argument, SPECULATION, UNSUBSTANTIATED OPINION or narrative, evidence which is clearly inaccurate or erroneous ... is not substantial evidence. Substantial evidence shall include FACTS, reasonable assumptions BASED ON FACTS, and expert opinion SUPPORTED BY FACTS."

"[The EIR analysis] must be supported by references to specific scientific and empirical evidence." *Mountain Lion Coalition v. Calif Fish & Game* 1989, 263 Cal Rptr 104

"A prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR process." *Kings County Farm Bureau v. Hanford* 1990

"A conclusionary statement 'unsupported by empirical or experimental data, scientific authorities, or explanatory information of any kind' not only fails to crystallize issues but 'affords no basis for a comparison of the problems involved with the proposed project and the difficulties involved in the alternatives.'" *People v. Kern County* 1974, 115 Cal Rptr 67 quoting *Silva v Lynn* 73 482 F.2d 1282, 1285

"The EIR must contain FACTS and analysis, not just the opinions of a public agency." -*Santiago Water District v Orange County* 1981, 173 Cal. Rptr 602 ***A detailed response is required when a comment raises a specific issue.** *Clearly v County of Stanislaus* (1981) 118 CA3d 348

The following describes how we can work on it together and how you can help.

For each Impact you will be asked to reveal all facts and reasoning used to arrive at conclusions of impact significance. As is often observed "We don't want to assume anything - because splitting apart the word 'Assume' makes an 'Ass,' U and Me."

The **CRITERIA NAMES LIST AND DEFINITIONS** is critical to objective decisions, so there are no hidden or ambiguously defined criteria or "add factoring." Each Impact requires at least one criteria to determine its significance. Some impacts may have many criteria. We need to know very specifically EVERY criteria which is used to arrive at EIR conclusions.

CRITERIA VALUES are critical since criteria names and descriptions alone are meaningless unless they have non-subjective definitions and explicit numeric values associated with them. For example "A moderate amount of runoff is expected" is wholly ambiguous and meaningless as criteria. However, "Impervious surface area will increase from 20 percent to 35 percent over the 3 acres and increase runoff by 5,000 gallons for every inch of rain" is an example of meaningfully quantified criteria.

The **MEASUREMENT METHODS** used are critical to know so a reviewer can understand how the foundational facts were measured, analyzed and used. When a single criteria is used it is critical to know exactly how it was measured and what instrument was used. Some examples of specifics - Was a mass spectrometer or an infrared spectrometer used? Which model Spectrometer was used (e.g. an HP 5987-A gas chromatograph/mass spectrometer); Which method was used (EPA 8270, ASTM E729-90 or an APHA test)? Did you use Allozyme or Microsatellite DNA analysis?

MEASUREMENT UNITS are critical to know so we know precisely what you mean by the measurements you describe and so the units don't change in the middle of the analysis. Which specific unit of measure are you using for each criteria (e.g. species per cubic centimeter, furlongs per fortnight, genes per cell etc.).

EXPLAIN FORMULAS USED

When two or more numeric criteria are used it is vital to understand how they are used together (i.e. are they added, multiplied or is some higher order function used such as a cosine).

UNCERTAINTY

There is nothing inherently wrong with uncertainty. Almost all public policy is made having some unknown information. What is inexcusable is not acknowledging uncertainty and failing to reveal it, estimate it or explain its meaning.

"A measurement result is complete only when accompanied by a quantitative statement of its uncertainty. The uncertainty is required in order to decide if the result is adequate for its intended purpose and to ascertain if it is consistent with other similar results." -National Institute of Standards and Technology (NIST)

US-EPA agrees with us and advocates that government agencies "Acknowledge Uncertainty" in their manual "Air Pollution and the Public: A Risk Communication Guide for State and Local Agencies", June 1991

There are at least Six Types of Uncertainty (adapted from a work by Dr. John Williams of Davis California) -

"Observational Uncertainty" arises from measurement and sampling errors.

For example when you repeatedly measure the same building and compare them you may get different results.

"Process Uncertainty" arises from natural variability. There is a developing consensus among scientists that the process uncertainty is large (Mangel et al. 1996)

"Model Uncertainty" reflects incomplete knowledge. For example ecological processes are so complicated, have so many variables, that no one understands them completely. Parameters for computer models are estimated from observed data so "estimation uncertainty" results.

Even simple risk assessment can have huge uncertainties. Eleven European governments established eleven different teams of their best scientists and engineers to assess the hazards from a small plant storing only a single hazardous chemical (ammonia). The eleven teams of world class experts analyzing this very simple system, disagreed with one another on fundamental points and varied in their assessments of the hazards by a factor of 25,000! (G. Tyler Miller, Living In the Environment 1998 p 278)

"Implementation Uncertainty" concerns "the extent to which management policies will be successfully implemented." This kind of uncertainty is especially large regarding EIR mitigation measures and attached as conditions to permits, because the agencies granting the permits seldom have the resources, and typically lack the motivation to check that the measures are being implemented properly. And then even if the measures are implemented properly, they may fail.

"Institutional uncertainty" involves the problems arising from interactions between individuals and groups composing the management process that effect implementation of stated conditions and risk mitigations.

ENVIRONMENTAL UNCERTAINTY INCREASING

"The natural world is a more uncertain place than most ecologists once believed it to be." Environmental Science; Morgan, Moran & Weirsm; W.C. Brown Pub. 1993

Please explain how you have addressed, considered and quantified EACH of these uncertainties for EACH criteria and EACH impact. We are not asking you to speculate, but to truthfully state the unknowns, their magnitude and reasonably foreseeable problems resulting from those unknowns. We expect you to follow with feasible solutions for contingency and failure.

* The QUANTIFIABLE BASELINE is critical to know so a reviewer can understand what starting point was used before project environmental impacts were added in.

Each Impact criteria must be measured from an existing Baseline using unambiguous units of measure and a replicable method. If an Impact criteria is not measured quantitatively (e.g. visual aesthetics) it is not a scientific or a legal fact - it is merely an opinion which is extremely distinct from a fact.

If a factual basis is avoided there must be a strong justification for avoiding quantitative measurements. We insist that quantitative evaluations be made or, if deemed impossible, that we be provided with a thorough and reasonable explanation of -

1. Why the baseline can not be quantified, and

2. the basis for each non-quantified conclusion.

THE AVERAGE - ISN'T

Mark Twain once observed "I never cross a river when all I know is its average depth is six inches."

If the phenomena examined is stable at two extremes (like daytime and nighttime temperatures), the average tells us nothing. As a former math and engineering teacher and a computer software scientist, let me try to explain two problems with data summarized without a complete description. The most common useful data description is which measure of central tendency "average" is used and how much the data varies from that.

When the term "average" is used we need to know precisely which kind of average is meant. There are at least eight (8) kinds of average or measures of central tendency: Midrange, Arithmetic Mean, Geometric Mean, Harmonic Mean, Logarithmic Mean, Weighted Mean, Median, and Mode. All seven usually give different, and sometimes wildly different, answers. If the type of average used is not disclosed the "average" claimed can be absolutely meaningless. If an inappropriate average is selected it may give highly misleading or even false conclusions. For example "Since half the people in the US are men and half are women the average adult has one ovary and

one testicle.", John Allen Paulos, Once upon a Number, 1998, Perseus Books.

If you explicitly spell out which kind of average is used and provide the data we don't mind the use of an average. However even an average is not complete without knowing the -

RANGE (Statistical) OR VARIANCE

The RANGE or VARIANCE for EACH statistic (Baseline, Impact, etc.) is also critical to know so a reviewer can understand how much the criteria varies. RANGE is independent and distinct from MARGIN OF ERROR. Range shows how much the phenomena can vary; Margin of Error shows how consistent the measurements are and how reliable the phenomenon is within that range.

When a average is used and extreme variations are hidden it is not possible to know what actual range of conditions could occur. So we need to know the extremes which can be expected from the activity.

A MARGIN of ERROR or a confidence level is needed for each claimed measurement, value, calculation and conclusion.

Every measurement has some error. We need to know the size of the errors. Imagine a child admits to you he only took three cookies. Asking the margin of error he responds "plus or minus Ten." This is alarmingly similar to information typically presented in Environmental studies.

When a margin of error is small, the measurement has high value. If the margin of error is large, the measurement has a lower worth. Americans are perhaps most familiar with margin of error often published with public opinion polls. (e.g. "Eighty percent of Americans support more environmental protection with a margin of error of plus or minus 4 percent.")

If you don't know the margin of error - we insist you estimate its approximate magnitude. Is it +/- 5 percent, 50 percent or 500 percent?

When combining two measurements - a new (probably additive, but potentially multiplicative) and inherently larger MARGIN of ERROR is created - and we want that amount stated separately.

Sometimes margins of error are not measured, but are opinions accurately called "estimates." Please state whether each MARGIN of ERROR is measured, calculated or an opinion.

Better yet than a margin of error is a probability distribution function (PDF). Unlike error bars which merely give a range in which a solution should fall, PDFs attach a likelihood to each possible value.

TRENDS OF HISTORICAL DATA is critical to know so a reviewer can understand

how the phenomena has varied over a time scale of ecosystem generations. (e.g. the previous 300 years to 30,000 years) to show whether there is a trend or a cycle. Variance only deals with recent short term fluctuations. Historical data can indicate whether there is an uptrend or a downtrend.

The MAXIMUM IMPACT CHANGE is critical to know so a reviewer can understand the most impact which this project could foreseeably cause. This is also extremely important in case the activity causes an impact larger than estimated by the Environmental Review. For many reasons environmental consultants often underestimate an environmental impact's magnitude. Knowing this number allows the public to have a quantifiable point at which the public objectively sue the consultant, the agency and the applicant for failing to adequately disclose the environmental impacts.

* The SIGNIFICANCE THRESHOLD LEVEL is critical to know so a reviewer can understand how Significance is measured and hold it up against the impact values. Ambiguous or unquantified significance thresholds are meaningless.

When an EIR claims an impact is less than significant, that value judgment is meaningless when there is no quantified significance threshold - so we can see if it is indeed less and by how much. See above where the California State Bar Association comments on this specific topic.

STRAW THAT BROKE THE CAMEL'S BACK
Significance thresholds are rarely a linear function. In some cases, when resources are extraordinarily abundant, it may take a large degree of environmental damage to reach a significance threshold.

However, when a situation is already at, or even beyond, a tolerance limit (e.g. a species population is endangered, a water supply emergency is officially declared, traffic is in gridlock, commercial parking is flooding into residential neighborhoods) - even the tiniest increase in environmental impact is significant. "The Straw that Broke the Camel's Back" is an excellent analogy to describe when the slightest increase can cause a significant impact.

One good example is California's Department of Transportation standard for a significant impact when an existing road or intersection is at gridlock (Level of Service "F") is the addition of a single vehicle trip. "It is the Department's position that the addition of even one peak hour trip in a LOS "F" environment represents a significant impact." (Cal-Trans letter dated Nov 18, 1997 to the Monterey County Planning Dept on the proposed September Ranch project.)

AMOUNTS vs PERCENTAGES
It is critical to know both absolute amounts AND percentages. Meaning can be hidden behind the failure to present both values. For example consider

the claim "66 percent of doctors support X." If you weren't told that only 3 doctors were asked, "66 percent of Doctors" was highly misleading when only two doctors supported the topic.

Similarly, cutting down 1 acre of flowers may not sound significant. But if you weren't told that there are only 2 acres of that flower left in the world making the loss of 1 acre - a worldwide 50 percent loss.

Both amounts and percentages must be stated so there is no mistake.

LEGAL THRESHOLDS LEVEL are critical to know so a reviewer can understand any legal limits that may already be in effect.

BOTH PHYSICAL AND LEGAL IMPACTS NEEDED
It is vital to distinguish between a number on paper (such as a legal threshold) and a real physical impact on the ground. It is the difference between the legal speed limit and how fast people really drive. We need to know both to insure no genuine impacts are overlooked. For example a project may have a legal entitlement to water, even when there is no physical water available. Or as one woman, from her hospital bed, decried the continued use of a nerve gas pesticide near her home "It gives us little comfort to know we're being poisoned legally!"

PHYSICAL THRESHOLDS
Legal thresholds for air pollution are often very different from known adverse health impacts. This is because air pollution impacts are usually set for Healthy, Male, Adults who are only about 20 percent of Americans. Thirty percent (30%) of ALL Americans have existing breathing problems. There can be genuine significant impacts on the 80 percent of the public who are not Healthy, Male, Adults.

LEGAL THRESHOLDS
Examples of state & federal laws which are potentially relevant to this activity include the California and Federal Endangered Species Acts, the US Clean Water Act, the US Clean Air Act, California's Proposition 65). Some laws have different legal limits for the same criteria. We want you to provide all of them.

NON-LINEAR RELATIONSHIPS are critical to understand so a reviewer can analyze those instances when even the tiniest tiny additional effect can "break the camel's back" and cause a potentially significant environmental impact. (See Significance Threshold Levels above)

CUMULATIVE, INCREMENTAL AND COMPOUNDING IMPACTS are critical to know so a reviewer can understand the approximate grand total of all of this specific impact from this and other projects, past, present and future.

ASSUMPTION SENSITIVITY can make huge differences in conclusions. Whenever assumptions are used for analysis it is critical that you analyze,

quantity and qualify how sensitive those assumptions are. For some assumptions the slightest variance can make a gigantic difference in the results. For example - when a poison is supposed to be a tiny percentage of a pesticide (e.g. 1 percent), but the real percentage varies from 0.5% to 1.5%, if that 50% increase in toxic content from what is expected is not disclosed and analyzed in the assumptions the conclusions could be substantially misleading.

RESOURCE LIMITS are critical to know so a reviewer can understand when the sustainable use of a resource is exceeded.

NATURAL RESOURCES ARE LIMITED & IMPORTANT

While it may seem obvious that human health and ecosystem health are important and that there are limits to natural resources it is appropriate to remember that they are actually explicitly found in laws.

California Environmental Quality Act - PUBLIC RESOURCES CODE 21000 et seq.
"The Legislature finds and declares as follows:
(d) THE CAPACITY OF THE ENVIRONMENT IS LIMITED, and it is the intent of the Legislature that the government of the state take immediate steps to identify any critical thresholds for the health and safety of the people of the state and take all coordinated actions necessary to prevent such thresholds being reached."

CALIFORNIA GOVERNMENT CODE SECTION 66478.2.
"The Legislature finds and declares that THE PUBLIC NATURAL RESOURCES OF THIS STATE ARE LIMITED IN QUANTITY that the population of this state has grown at a rapid rate and will continue to do so, thus increasing the need for utilization of public natural resources."

MONTEREY COUNTY GENERAL PLAN pg 136
"The current era of LIMITED RESOURCES has directed public attention toward resource conservation and resource recovery."

MONTEREY COUNTY GENERAL PLAN pg 8
"The NATURAL RESOURCES discussed in this plan can be characterized either as those which are unaffected by man or as those which may be DEPLETED OR DESTROYED improper management. Geography, climate, and geology, for example, are essentially unchanged by man's activities. The remaining categories of this section--MINERALS, SOILS, WATER, VEGETATION, WILDLIFE, OCEAN RESOURCES, ENVIRONMENTALLY SENSITIVE AREAS, ARCHAEOLOGICAL RESOURCES, AND ENERGY--MAY BE SIGNIFICANTLY ALTERED, OR EVEN DESTROYED THROUGH MISUSE."

1993 US Council on Environmental Quality Report Chapter 2: Water Quantity and Quality; Arizona and California.
"In water-deficit areas such as Arizona and California, large volumes of groundwater continue to be withdrawn to meet agricultural and municipal needs. BECAUSE OF LIMITED SUPPLIES, such withdrawals cannot be sustained indefinitely. Groundwater mining in the California San Joaquin Valley has

resulted in sediment compaction and land subsidence."

Important Interests:

Health and Safety Code Section 116270

"The Legislature finds and declares all of the following:

(a) Every citizen of California has the right to pure and safe drinking water."

California Fish & Game Code 1600

"The protection and conservation of the fish and wildlife resources of this state are hereby declared to be of utmost public interest."

California Fish & Game Code 2014. (a) "It is the policy of this state to conserve its natural resources and to prevent the willful or negligent destruction of birds, mammals, fish, reptiles, or amphibians."

California Fish & Game Code 2052

"The Legislature further finds and declares that it is the policy of the state to conserve, protect, restore, and enhance any endangered species or any threatened species and its habitat ..."

California Fish & Game Code 2781.

The people of California find and declare that wildlife and fisheries conservation is in the public interest and that it is necessary to keep certain lands in open space and natural condition to protect significant environmental values of wildlife and native plant habitat, riparian and wetland areas, native oak woodlands, and other open-space lands, and to provide opportunities for the people of California to appreciate and visit natural environments and enjoy California's unique and varied fish and wildlife resources.

16 U.S.C. 1531 Endangered Species Act (FESA)
Sec. 2. (a) Findings.--The Congress finds and declares that--
(1) various species of fish, wildlife, and plants in the United States have been rendered extinct as a consequence of economic growth and development untempered by adequate concern and conservation;
(2) other species of fish, wildlife, and plants have been so depleted in numbers that they are in danger of or threatened with extinction;
(3) these species of fish, wildlife, and plants are of aesthetic, ecological, educational, historical, recreational, and scientific value to the Nation and its people; (emphasis added)

California Public Resources Code 4512. Findings and declarations.

(a) The Legislature hereby finds and declares that the forest resources and timberlands of the state are among the most valuable of the natural resources of the state and that there is great concern throughout the state relating to their utilization, restoration, and protection.

As the Myth of SuperAbundance falls to pieces, developers now raise the Myth of Technological Supremacy - the belief that even though resources are finite, we can still develop and pollute unabated because science and technology will always provide ways of solving the problems of pollution and resource depletion.

"However, if science alone were as successful as the myth suggests, then the human race would not be in the throes of a crisis of pollution, population, industrialization, and resource depletion." Courtesy "Frontier Ethics and Lifeboat Ethics" by K.S. Shrader-Frechette, Boxwood Press

EXPERT QUALIFICATIONS are critical to know so a reviewer can understand whether an expert is genuinely trained to offer opinions on the specific impact at issue - or merely familiar with the general field. It is helpful to cite any peer reviewed and validly published papers on the specific impact by the expert. Agency planning staff are rarely specifically or even generally trained to make decisions on environmental issues. Yet Courts give them wholly undue deference when they make conclusions.

IRRELEVANT EXPERTISE

For example Forestry professionals are often used to provide value judgments on the significance of ecological impacts - even though foresters rarely have any training in ecology or even basic biology. Forester training has no goal or information resembling protecting a healthy ecosystem. They are only trained to determine what makes good lumber. Their implied "expertise" is almost completely meaningless to any scientific judgments made about ecosystem health.

What comes as a shock to many is how biologists and botanists have little if any training in ecology or ecosystems. Interdependence is perhaps the most important concept for ecosystem health, yet the word does not even appear in most major Biology text books. Because most biologists are only trained to deal with a single species at a time, unless they receive special training in ecosystems and about the particular ecosystem they are dealing with - they are normally inadequate to make any ecological judgements.

GRAPHS

Please use graphs and time lines wherever possible.

MUST IDENTIFY FEASIBLE MITIGATION

By law, an environmental impact report must identify and examine significant environmental effects of a proposed project, feasible mitigation measures, unavoidable significant effects, significant irreversible environmental changes, and alternatives to the proposed action. West's Ann.Cal.Pub.Res.Code 21061, 21100.

"The National Environmental Policy Act (NEPA) and California Environmental Quality Act (CEQA) require an intensive environmental review of projects that may adversely affect a Federally listed species. However, project proponents are not required to avoid impacts to non-listed species, and proposed mitigation measures are frequently not adequately implemented."
-US-Fish & Wildlife Service in Federal Register 1996

MUST IMPLEMENT FEASIBLE MITIGATION

CEQA requires agencies to implement feasible mitigation measures or alternatives identified in the EIR. (sec. 21002, 21081; Sierra Club v. State Bd. of Forestry (1994) 7 Cal.4th 1215, 1233.)

MEANINGFUL MITIGATION NEEDS MEASURABLE PERFORMANCE CRITERIA

Mitigation is meaningless unless it has measurable performance criteria. Mitigation performance criteria must take the form - certain measurable events will occur by a specific date - or specific penalties must occur.

MITIGATION ADEQUACY BY TYPE

There are two types of mitigation adequacy and inadequacy - legal and physical.

ILLEGALLY INADEQUATE MITIGATIONS

According to the CEQA Deskbook 1996 (Bass, Herson, Bogdan pg 100 "Cited as an authoritative Source by the California Courts.") -

All Mitigations are legally inadequate which involve: "Conducting Surveys", "Submitting for Review", "Consulting with ...", "Coordinating with...", Informing, Encouraging or discouraging, Facilitating, "Strive to..."

POTENTIALLY INADEQUATE MITIGATIONS

All Mitigations are potentially legally inadequate which involve "Provide Funding for...", "Hire Staff", "Monitor or Report", Complying with existing regulations. Id.

ADEQUATE MITIGATIONS

The only Mitigations which are potentially legally adequate are those which sufficiently Avoid, Minimize, Reduce, Rectify over Time, and Compensate. Id.

AVOIDANCE MITIGATION is important to wholly avoid an impact.

We do not accept any mitigation other than avoidance. We find the concept of mitigation as repugnant as a rapist sending flowers to their victim.

California law agrees with us regarding Coastal Zone impacts on Environmentally Sensitive Habitat Area (ESHA) including habitat for listed species and wetlands as the Coastal Act prohibits mitigation for impacts on these endangered environmental systems.

Inability to determine mitigation effectiveness means the Mitigations are not fully enforceable due to vagueness. CEQA requires Mitigations to be "fully enforceable" 21081.6(2)(b).

If you use the term "mitigated" or "mitigated to a less than significant level" you need to explicitly define those terms or they are meaningless due to overly broad ambiguity.

IMPACT INVERSE MIGHT PROVIDE MITIGATION

You will be asked to provide the reverse of each impact as Mitigation.

While this does not always work, often reversing an impact can provide mitigation. For example: Paving a forested area causes impacts. The reverse, Dedicating currently paved acreage for forest restoration, might be Mitigation.

ENDANGERED SPECIES IMPACT CRITERIA

To examine whether an activity impacts a listed species, first one must determine if the species potentially visits or uses the site. If so then you must examine if the species would be affected by the activity.

US Fish & Wildlife Service use three criteria for site assessment protocol determination for a species listed under the Endangered Species Act:

1. Is any of the project well within the range of the species?
2. Is any of the project within five miles of a recent observation?
3. Is any habitat consistent with the species known habitat?
4. Please provide a map of the Action Area as defined by the Federal ESA.
(For these three questions please use Venn diagrams as used in the FWS & NMFS March 1998 ESA Consultation Handbook pg pgs 4-16,4-17.)
5. Please provide a map of the areas directly affected by the project.
6. Please provide a map of the areas indirectly affected by the project.

LOSSES OF HABITAT OR POPULATIONS

For each listed species, in addition to the harm to individuals, you will be asked to identify all known and suspected major and minor threats to the species (examples include: habitat loss, habitat destruction, habitat fragmentation, habitat modification or habitat restriction caused by residential, commercial, recreational, agricultural development activities; commercial hunting and poaching; overfishing; predator and pest control; predators losing their primary food source and increasing their predation of the listed species; extremes of high or low water, introduction of nonnative (exotic) species, increased sedimentation from grazing, pesticide runoff, sewage runoff, groundwater overdrafting, increased aquatic growth causing water anoxia, elevated water temperatures which could lead to stress, poor condition and poor survival in aquatic species, changes in food supply, prevention of immigration, use of chlorinated hydrocarbons, toxins in general, potential oil spills, off-road vehicles, shooting, existence of power lines, presence of domestic pets, loss of tall snags for roosting).

HOST PLANT DISTURBANCE CAN BE ESA TAKE

"The disturbance of this species host plant may be considered to be take of the species and a violation of Section 9 of the [US-Endangered Species Act]." US-FWS letter to Monterey County Dec 10 1997 discussing Smith's Blue Butterfly and its buckwheat host plant.

HABITAT ENHANCEMENT CAN BE ESA TAKE

"...habitat enhancement activities for Smith's Blue butterfly, while intended to benefit the species, and also result in [ESA] take." US-FWS letter to Monterey County Dec 10 1997 discussing Smith's Blue Butterfly.

COASTAL ACT ESA PROTECTION

Each federal or state listed species and their habitat are protected by the Calif. Coastal Act (as Environmentally Sensitive Habitat Area "ESHA") when they live in the Coastal Zone. Each listed species is also protected against "take" by the ESA.

* LOSS OF A SINGLE INDIVIDUAL OF A LISTED SPECIES IS SIGNIFICANT

The loss of a single individual of a listed species must have a Finding of Significant Impact under CEQA Section 15065. *Mira Monte Homeowners v. San Buenaventura Cty. ETC.* 165 Cal.App.3d 357 Cite as 212 Cal.Rptr. 127 (Cal.App.2 Dist. 1985)

* The loss of as little as a quarter of an acre of habitat a single individual of a listed species must have a Finding of Significant Impact under CEQA Section 15065. *Mira Monte Homeowners v. San Buenaventura Cty. ETC.* 165 Cal.App.3d 357 Cite as 212 Cal.Rptr. 127 (Cal.App.2 Dist. 1985)

CITATIONS

1) When citing a reference document, along with a quote from the reference please cite the exact document (and where it can be found), page, paragraph and specific sentences so there is no ambiguity.

If you think you've already answered a question, similarly, please cite the exact page, paragraph and SPECIFIC SENTENCES so there is no ambiguity.

2) A 1999 study of 61,594 peer reviewed articles in 184 "high profile" journals found that in only 327 articles (0.53 percent) did an author acknowledge a potential for financial gain. In 70 percent of the journals, not a single author reported a financial tie.

Yet a 1998 study showed that some 34 percent of all Boston area authors who published papers in 14 major journals during 1992 had financial stakes in the outcome of the articles - even though none disclosed those stakes in the articles. (Science News Feb 6 1999, Vol 155 pg 91).

* For every report cited please state whether the author reported that s/he had NO potential financial stake in the outcome of the paper.

NOTICE

It is our opinion that it is not possible to make an adequate or informed decision lacking the basic facts requested. Concluding something without basic facts is similar to trying to add one number and an unknown number. It doesn't matter how certain you are of the known number, if the unknown number can vary by a magnitude or more (say between one and one thousand), any result or conclusion from adding the two is at least wildly inaccurate

and more likely meaningless.

If you disagree and fail to answer any question directly or fail to provide any of the quantitative analysis, please clearly explain the method you used and the threshold of information you need and used to make each benefit, significance and mitigation decision and why you avoided using a quantitative measure.

* 1 - INADEQUATE AND OUT OF DATE GENERAL PLAN.

The Document appears to have ignored this potentially significant impact. Please carefully analyze and disclose the potential impacts of Inadequate and Out of Date General Plan.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The California Attorney General's office found that Monterey County's General Plan may be seriously outdated and needs adoption of a "comprehensive general plan update." AG letter to Monterey County August 11, 2000

"The [Monterey County] General Plan is out of date." Jim Colangelo, head of Monterey County Environmental Resource Policy, and in charge of Monterey County General Plan Update - verbally and on powerpoint presentation to public meeting for General Plan Update, Jun 11, 2001 at MPC lecture forum 103 7:00pm

"As of March 1994, the records maintained by the California Dept. of Housing and Community Development indicated that only 42 percent of General Plans were in compliance with the law, measured solely on the basis of adequacy of the housing element. If the adequacy of the other elements was also taken into account, the level of compliance would be even lower." -Understanding Development Regulations, Solano Press 1996 p 36)

GENERAL GENERAL-PLAN INADEQUACY

The cities of Carmel, Pacific Grove and many others do not address hazardous wastes. Monterey County Draft Haz Waste Mgmt Plan p 10-10

Recycling vs Garbage

In 1989 AB 939 passed mandating all jurisdictions (each city and county) to reduce waste stream by 50% by the year 2000 or face fines of \$10,000 per day. In spite of the 12 year phase in - almost no city or county in California has complied with this law.

Monterey COUNTY GENERAL PLAN INADEQUACY Changed Circumstances since 1984 GP approval and not incorporated into the Monterey County General Plan:

POPULATION:

AMBAG population forecast changed 4 times and now has disclaimer on use.

LUP states "there will be no major reduction in Fort Ord operations."; Fort Ord Closed

WATER:
LUP states "there will be some increase in water supply."; yet, water supply has decreased.
Water supply for the Monterey Peninsula area became legally constrained with (SWRCB order 95-10).

Carmel River Dam approval voided by the court.
Salinas Aquifer overpumping is now 40,000 to 50,000 acre feet per year more than recharged by rain.
Saltwater Intrusion has Increased.

TRAFFIC:
LOS "F" on Hwy 1 @ CVR
LOS "F" on Hwy 1 @ Hwy 68
LOS "F" on Hwy 68 to PG
LUP states HCF "will be constructed";
HCF approval voided by court in 1998

BIOTA:
LUP states "there will be no major change in environmental regulations"; yet The Monterey Bay National Marine Sanctuary was created since the General Plan was adopted and it makes no mention of the Sanctuary.

Many wildlife species have been formally listed under the Federal and State Endangered Species acts since the General Plan was approved. Although the General Plan has been amended regularly to allow development, none of the newly listed species or their habitat have been acknowledged. The General Plan is out of date because it does not recognize the potential impacts to those species, their thousands of acres of habitat and the protection they need.

Just a few of the species listed since the General Plan was adopted include: West Coast Steelhead (*Oncorhynchus mykiss*, or O. mykiss) 1997, the California Red-Legged Frog (*Rana aurora draytonii*) 1996, the Snowy plover, Gowen Cypress, Yaden's Piperia, Condors have been reintroduced, Marbled Murrelets have been found nesting, Northern Spotted Owls, Great gray owl, Elf Owls, Smith's Blue Butterfly.

The California Red-Legged Frog and the West Coast Steelhead (*Oncorhynchus mykiss*) are both significantly harmed by overpumping of the Carmel River causing its dewatering. The US-Fish & Wildlife Service (FWS) has warned that dewatering the Carmel River is potentially a take of the Frog (CRLF) under the Endangered Species Act. The US-National Marine Fisheries Service has concluded "steelhead are continuing to be taken every year due to the overpumping."

Pinus Radiata (Monterey pine) was listed by the United Nations FAO in 1986 as an Endangered tree; after that the species and its habitat became threatened dramatically threatened by Pine Pitch Canker (*Fusarium*

subglutinans). At the same time the Pebble Beach Company proposes to destroy hundreds of acres (more than a square mile) of the healthiest native *Pinus Radiata* forest remaining. The General Plan does not acknowledge this or provide any protection for the tree or its habitat - in fact the County takes pains to avoid any protection for the tree.

Five (5) plants are newly listed under the Endangered Species Act.

The Bolsa Chica case has revised Coastal Zone protection. Wetlands and ESHA are now wholly protected by the Coastal Act.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Inadequate and Out of Date General Plan.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 2 - OFFSITE LOCATION ALTERNATIVE - OBTAIN EXISTING GOLF COURSE.**

The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of Offsite Location Alternative - Obtain Existing Golf Course.

An offsite alternative is one that does not involve the activity on the proposed land. In some cases it may involve examining land out side the area. For example when a transportation agency's proposal to dump dirt into the ocean, one offsite alternative would be to remove the dirt to areas away from the watersheds which drain into the ocean.

The DEIR refuses to analyze an existing offsite golf course. It only mentions "new" golf course sites.

An existing offsite golf course would complement the existing PBC golf courses just as the Old Del Monte at the Hyatt in Monterey does.

The "question of water" is bogus as PBC has just asked for an received an expansion of the "benefitted properties" from those owned now to any that they might purchase in the future inside Del Monte Forest. The water board made it clear in 2004 that the only hindrance to expanding the "benefitted properties" to properties outside the forest was that they would have to prepare an EIR.

* OFFSITE MITIGATION - The project proposes offsite mitigation for Monterey pine forest ecosystem destruction.

* The applicant uses offsite mitigation for Golf course tournaments in Pebble Beach. For traffic and parking mitigation they bus people in from as far away as Ft. Ord. Those people are "complementing" their golf courses.

* The applicant already owns and operates one offsite Golf Course - at the Hyatt in Monterey.

So we insist that Offsite Golf Courses be properly analyzed as a viable Alternative. There are at least two general

methods with NO potentially significant ENVIRONMENTAL IMPACTs - purchase or lease.

Ft. Ord's Black Horse and Bayonet Golf Courses are closer to the proposed project site (with colossal environmental impacts) than the Ft. Ord bussing the applicant uses for event traffic and parking mitigation.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average

amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

*** 3 - NO ENVIRONMENTAL IMPACTS ALTERNATIVE.**

The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of No Environmental Impacts Alternative.

This alternative provides a maximum of zero potential environmental harm including no loss of wildland or wildlife, zero increase in traffic or air pollution, no increase in water use.

The only way to unarguably realize this alternative is to provide for actions that clearly increase wildland and wildlife, clearly decreases traffic and air pollution, and clearly decreases water use.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is

not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

K. BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

L. COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 4 - MINIMUM NON-TAKING ALTERNATE.

The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of Minimum Non-Taking Alternate.

The US Supreme Court has consistently held that at least 50% and sometimes as much as 95%, of a parcel's economic worth can be zoned away or denied development without causing a "taking."

Keeping that 95% reduction in zoning in mind, please prepare the smallest development alternative possible without causing a taking.

Property Rights vs Community Rights - Key U.S. Supreme Court Cases

1) ZONING IS CONSTITUTIONAL

Village of Euclid v. Ambler Realty Co. (1926)

This case brought (unsuccessfully) by the real estate industry established the constitutionality of zoning ordinances.

2) MERELY DIMINISHING THE VALUE OF PROPERTY BY 50 PERCENT IS INSUFFICIENT TO DEMONSTRATE A TAKING - THUS CONSTITUTIONAL

Concrete Pipe, Inc. v. Construction Laborers Pension Trust (1993)

In this post-Lucas case, Supreme Court returns to traditional Penn

Central three-part formula and reaffirms that mere diminution in property value (in this instance, nearly 50%) does not amount to a taking. The Court expressly distinguished the generally applicable three-part test from the limited Lucas test, which applies only in cases involving the complete "destruction" of the economically viable use of real property. The Court held that Concrete Pipe's required 46% pay-out to withdraw from a multi-employer pension plan was not a taking. The nearly 50% property diminution fell far short of the complete destruction of economically viable use of the property.

3) DETERMINED THAT A 100% ECONOMIC LOSS EQUALS A TAKING, BUT SOMETIMES 95% IS NOT A TAKING.

Lucas V. South Carolina Coastal Council (1992)

The rule: A regulation amounts to a taking if it removes all economically viable use of property... Lucas is a narrow holding because very few regulations remove all economically viable use of property.

"It is true that in at least some cases the landowner with 95% loss will get nothing, while the landowner with total loss will recover in full. But that occasional result is no more strange than the gross disparity between the landowner whose premises are taken for a highway (who recovers in full) and the landowner whose property is reduced to 5% of its former value by the highway (who recovers nothing). Takings law is full of these all-or-nothing situations."

The exception:... unless the regulation is consistent with the state's traditional (common) law of nuisance and property.

In my opinion this means that government may prohibit any development where it would be a nuisance or a health or safety hazard.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 5 - HANDS-OFF MANAGEMENT ALTERNATIVE.

The Document appears to have ignored this potentially feasible Alternative.

Please carefully analyze and disclose the potential benefits of Hands-Off Management Alternative.

This "Leave-It-Alone" alternative normally provides the absolute fewest and smallest of environmental impacts. In some cases where ongoing management provides continuing environmental impacts such as noise, air or water pollution the Hands-Off alternative provides even fewer and smaller impacts than the "No-Project" alternative.

This is the No-Management Alternative. This alternative recognizes that there is little, if any, evidence that human management of a natural ecosystem has ever improved all of its ecological values as well as when nature is left to itself. This is distinct from the clean up management of an area that has been destroyed by human activities including damming, paving, mining, logging, and hazardous waste dumping.

Conservation and stewardship are as ethically meaningless to environmentalists just as abolitionists scorned "kindly slavery." Roderick Nash, The Rights of Nature, 1989 DEQ

We insist this Management Alternative be evaluated for Monterey pine forest ecosystem protection.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the

studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 6 - CARRYING CAPACITY ALTERNATIVE.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Carrying Capacity Alternative.

Restrict the project so that use by the Maximum Persons at One Time (PAOT) never exceeds the resources available.

Carrying Capacity is "the number of individuals of a given species that can be sustained indefinitely in a given area." Miller, Living in The Environment pg 206, 1998

Carrying Capacity is "the maximum population that a given area's resources can sustain indefinitely." (p 25) Carrying Capacity is "the population size that the total resources of the habitat can support on a sustained basis." (p 91) Environmental Science (textbook) ; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993

"The Carrying Capacity of a specific area is the number of individuals of a species that can survive in that area over time. In most populations, four broad categories of factors interact to set the carrying capacity for a population. These factors are: 1) the availability of raw materials, 2) the availability of energy, 3) the accumulation of waste and their means of disposal, and 4) interactions among organisms." Environmental Science (textbook) Enger & Smith, 1995

The above two define carrying capacity for a single population.
The following is a definition and a rule of thumb for carrying capacity of an area.

The Carrying Capacity of a specific area is the number of individuals of each and every species that can survive in that area over time.
Because of constraints including food, energy and habitat area if one species increases - some other species must decline.

Carrying Capacity is not a rigid unvarying number, it can vary by a small or a medium amount. It can vary downward during times of stress such as drought. The problem for Planners is that for many reasons politicians tend to vote of maximum numbers of human population. So even when Planners set a maximum human population for an area, politicians will vote to allow population to reach that number. This becomes a problem when the stress (i.e. drought) arrives. In such a case the stress can cause annoyances or illnesses and even deaths.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 7 - NO SIGNIFICANT CUMULATIVE IMPACTS ALTERNATIVE.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
No Significant Cumulative Impacts Alternative.

Restrict the proposed project so that use by the Maximum Persons at One Time (PAOT) does not cause any cumulative environmental impacts.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 8 - NO CONFLICTS WITH EXISTING LAWS AND ZONING ALTERNATIVE.

The Document appears to have ignored this potentially feasible Alternative.

Please carefully analyze and disclose the potential benefits of No Conflicts with Existing Laws and Zoning Alternative.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the

studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 9 - EXCHANGING SOME RESOURCE PROTECTION FOR OTHERS DESTRUCTION.

Protecting Other Resources To Allow Destruction is false mitigation.

It is a perfect example of mitigation causing additional impacts.

It is sometimes called Hostage Mitigation. It is analogous to a developer threatening "If you allow me to rape your daughter - I'll leave your wife alone." or "If you allow me to take your television - you can keep your car."

Both are destructive.

THIS project proposes this kind of mitigation for Monterey pine forest ecosystems.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:

Exchanging Some Resource Protection for Others Destruction.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure: Exchanging Some Resource Protection for Others Destruction. using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure: Exchanging Some Resource Protection for Others Destruction. using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Exchanging Some Resource Protection for Others Destruction.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure: Exchanging Some Resource Protection for Others Destruction.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure: Exchanging Some Resource Protection for Others Destruction.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 10 - MONETARY FINE MUST EXCEED COST OF BUSINESS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Monetary Fine Must Exceed Cost of Business.

When an environmental crime provides large profits yet has tiny fines if caught, there is no disincentive to doing the crime.

Only when the penalty cost of getting caught is certain jail time or exceeds the potential profits by a magnitude does a deterrent occur.

Please estimate the potential profits in dollars if each mitigation is not performed.

* 11 - SILTATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Siltation.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Siltation is distinct from Sedimentation. Siltation is the presence of material before running water settles. Sedimentation is that material which "settles to the bottom of a liquid."

"Turbid waters, by reducing light penetration can also reduce the population of photosynthetic microorganisms which are a primary food source in the aquatic food chain." The California Water Atlas, California Office of Planning and Research, 1978-1979, ISBN 913232-68-8

Siltation of streams harm fish and other aquatic life by reducing visibility and harming their breathing. How would you like to breathe air full of silt?

Siltation can reduce photosynthesis by blocking light to the stream and its bed.

Please use as impact measuring criteria: weight or mass, concentration, and area.

The lower ninety (90) miles of the Salinas River (Hydro Unit # 309.100)

is on the US EPA's CWA 303(d) list for Sedimentation/Siltation contamination exceeding TMDL limits. The pollution comes from Agriculture, Irrigated Crop production, Agriculture-storm runoff, Agriculture-irrigation tailwater, Agriculture Return flows, Roads, Construction, Channel Erosion, and non-point source pollution.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Siltation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 12 - SILTATION EFFECTS ON THE RED-LEGGED FROG.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of

Siltation effects on the Red-legged Frog.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Siltation effects on the Red-legged Frog.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 13 - SEDIMENTATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Sedimentation.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Siltation is distinct from Sedimentation. Siltation is the presence of

material before running water settles. Sedimentation is that material which "settles to the bottom of a liquid."

Sediment is deposited material which "can blanket fish spawning gravels, smother aquatic organisms that dwell on the bottom of streambeds, and interfere with respiration of fish eggs." The California Water Atlas, California Office of Planning and Research, 1978-1979, ISBN 913232-68-8

"In addition high loads of sediment increase costs of water treatment and can interfere with irrigation by leaving a hard layer of sediment on the topsoil which seedlings may have difficulty breaking through." Id. p 94

Dams fill with silt, rocks and sediment. The original Carmel River Dam was built in 1888. The San Clemente Dam was built in 1921 with a capacity of 2154 acre feet. It is now filled to the brim with fine silts, rocks and sediments.

The Los Padres Dam was built in 1939? with a capacity of 3100 acre feet. About half its capacity has been lost as it filled with silt, rocks and sediment leaving only about 2100 acre feet.

The Rindge Dam on Malibu Creek in Los Angeles County is entirely filled with silt.

Please use as impact measuring criteria: weight or mass, concentration, depth and area.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sedimentation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 14 - SEWER SYSTEMS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewer Systems.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Environmental Impact Statements on highways and sewage treatment plants seldom evaluate the resulting impact on urban growth patterns. These secondary effects may, however, be more damaging than the primary effects. The second form of shortsightedness is the tendency to consider

only changes in the physical environment and to ignore changes in the social environment. Yet impacts on pollution patterns or community behavioral patterns may affect the quality of the human environment much more than impacts on air or solid waste."

U.S. EPA, letter to the President's Council of Environmental Quality
21 December, 1971

The US has some one million miles in its sewage system network designed to carry 50 trillion gallons per day. In 2004 a report warned this aging system is failing and threatening public health, our drinking water supplies and imperiled species.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewer Systems.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 15 - INCREASED SEWERAGE DEMAND.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Increased Sewerage Demand.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

According to AMBAG's 1998 population forecast, Carmel Valley is at or beyond septic tank capacity now. Because of the saturation, Carmel river water contact is prohibited during flooding because of the risk of infection.

According to AMBAG's 1998 Population forecast - Monterey County Environmental Health Dept. found the following areas are "at, or approaching, septic systems carrying capacity:"
Bolsa Knolls area north of Salinas (CT 105.01 & CT 1)
Carmel Valley Village (CT 110)
Mid-Carmel Valley area (CT 116 & CT 100)

"In the following areas there are blanket restrictions on both further subdivisions and second units due to nitrate contamination potential:
Carmel Valley Village (CT 110)
Mid-Carmel Valley area (CT 116 & CT 100)
Prunedale Area (Ct 103.01)

Please use as impact measuring criteria: weight or mass and concentration.

Restaurants in Carmel Valley generate 1000 gallons of sewage per day plus 30 gallons per restaurant seat. (An 80 seat restaurant would generate 3,400 gallons of sewage per day.) Bernardus Negative Declaration 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Sewerage Demand.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 16 - SEWAGE CAPACITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewage Capacity.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Decomposition of the daily wastes of just one person requires all the dissolved oxygen in 9,000 liters (2,200 gallons) of water." Environmental Science; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993

What is the currently permitted volume of waste discharge?
What is the average daily waste flow into the system?
What is the peak daily waste flow into the system?

Please graph the sewage capacity needed through the construction phase of the project.

Please graph the sewage capacity available and permitted through the construction phase of the project.

AMBAG's Executive Director Nick Papadakis stated: ... "The triparty agreement that you are referring to does call for the AMBAG forecast to be used by the Air District when they're preparing Air Quality Plans.
that is correct. its also required under the Consistency determination between air quality and the sewer plant sizing.

"When EPA grants money to an agency to construct a sewer facility that construction and sizing of that facility must be consistent with the air quality plan. Therefore the triparty agreement calls for every forecast to use the air quality plan to ensure sizing. And that's the connection."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewage Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 17 - SEWAGE POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewage Pollution.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Sewage can contain industrial pollution including radioactive and highly toxic chemicals.

Sewer systems are almost never separated into residential and commercial lines allowing commercial and industrial chemicals into sewage plants as well as household wastes.

Cancer victims taking chemotherapy drugs excrete the radiological waste into residential and hospital toilets.

Households use powerful lyes to clean toilets.

Restaurants discharge huge amounts of grease into sewage lines.

"A person who takes an antibacterial drug excretes much of the dose intact (SN:3/21/98, p 187). Contaminating rivers or soil, the persistent drug kills many of the microbes it encounters but leaves behind those that can resist it (SN: 6/5/99, p 356)." SN Jan 1, 2000, p 5

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewage Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 18 - INCREASED EFFLUENT DISCHARGE TO MARINE SANCTUARY.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Increased Effluent Discharge to Marine Sanctuary.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Increased Effluent Discharge to Marine Sanctuary.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 19 - SEWERAGE INTERRUPTIONS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Sewerage Interruptions.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Sewerage Interruptions.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 20 - SEWERAGE OVERFLOWS AT THE CAWD PLANT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewerage Overflows at the CAWD Plant.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Mismanagement at the Carmel Area Wastewater District (CAWD) has caused

several sewage overflows into the Carmel River and the Carmel Bay and resulted in orders to cease and desist.

Please use as impact measuring criteria: number of occurrences and weight or mass of each occurrence.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sewerage Overflows at the CAWD Plant.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 21 - SEPARATE SEWER LINES FOR RESIDENTIAL AND COMMERCIAL.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of

Separate Sewer Lines for Residential and Commercial.

Residential, commercial and industrial sewage are all combined in a single line and are treated identically. There are no separate treatment facilities handling the pollutants occurring from industrial wastewater, specifically heavy metals and pesticides.

This contamination prevents the use of the sewage solids in agriculture.

Please evaluate separate sewer lines and treatment for Residential, commercial and industrial sewage.

This Alternative does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 22 - UNSTABLE SLOPES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Unstable Slopes.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

All sloping ground tends to flatten when exposed to rain or wind or seismic activity.

All sloping ground has a maximum angle beyond which it will easily erode. That slope is called the angle of repose.

The steeper the angle of repose the greater the amount of landsliding during rains, winds or seismic events.

Please use as impact measuring criteria: angle of repose of varying soils, angle of allowable slope cuts, number of cuts and mapped area of activity.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Unstable Slopes.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 23 - INCREASED EXPOSURE TO SEISMIC LANDSLIDING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Increased Exposure to Seismic Landsliding.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Monterey County had an opportunity to be a testing ground for extensive mapping by the US Geological Survey in the 1970's, according to John Tinsley, a research geologist for the USGS in Menlo Park. But the county turned the offer down, Tinsley said, 'because the rock-ribbed Board of Supervisors didn't want anybody telling them what they could do with their property.'

San Mateo County accepted the offer and reaped the benefits as the first county to control landslide hazards by doing a slope stability map. Based on that mapping, San Mateo County limited development on unstable slopes, sometimes only allowing one house per 40 acres."

Since the County's official maps were prepared in 1975 seismologist have learned that "shaking is the most severe parallel to faults, not in a concentric pattern as had been previously thought, and that landslides cause more damage than earthquakes in Monterey County." -Herald Oct 15 1999 Front Page "Mapping out the Big One"

The mansions proposed for the upper parts of Jeffers' Forest (PQR) are above a pristine stream and watershed. They will increase erosion into that forest and subject buildings to increased Seismic Landsliding.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Exposure to Seismic Landsliding.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 24 - EARTHQUAKE GROUND RUPTURE FROM ACTIVE ONSITE FAULTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Earthquake Ground Rupture from Active Onsite Faults.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Earthquakes can cause the ground to rupture and pull buildings and roads apart causing their collapse.

The location of ground ruptures is not completely predictable.

In 1976 a quarter of a million people were killed by an earthquake in Tang-shan China.

Monterey County prohibits any structure habitable or inhabitable within 50 feet on either side of a fault line.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Earthquake Ground Rupture from Active Onsite Faults.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 25 - SEISMIC SHAKING IMPACTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Seismic Shaking Impacts.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Seismic Shaking can cause ground movement, both temporary and permanent, landsliding, rockfalls and liquefaction.

"Monterey County had an opportunity to be a testing ground for extensive mapping by the US Geological Survey in the 1970's, according to John Tinsley, a research geologist for the USGS in Menlo Park. But the county turned the offer down, Tinsley said, 'because the rock-ribbed Board of Supervisors didn't want anybody telling them what they could do with their property.'

San Mateo County accepted the offer and reaped the benefits as the first county to control landslide hazards by doing a slope stability map. Based on that mapping, San Mateo County limited development on unstable slopes, sometimes only allowing one house per 40 acres." Herald Oct 15 1999 Front Page

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Seismic Shaking Impacts.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 26 - SEISMIC LOADING FROM A MAXIMUM CREDIBLE EARTHQUAKE (MCE).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Seismic Loading from a Maximum Credible Earthquake (MCE).

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Please provide equations and state all values used to calculate the seismic factor.

Please use the redundancy factor from the UBC 1630.1.1 in the lateral analysis calculation and state that which you use.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Seismic Loading from a Maximum Credible Earthquake (MCE).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 27 - INCREASED EXPOSURE TO SEISMIC GROUND SHAKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased Exposure to Seismic Ground Shaking.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

Since the County's official maps were prepared in 1975 seismologist have learned that "shaking is the most severe parallel to faults, not in a concentric pattern as had been previously thought, and that landslides cause more damage than earthquakes in Monterey County."

"[Consulting Geologist] Rosenberg also believes geologic information is not properly used by the County Planning Department, which relies on its own staff to review reports rather than on registered geologists. 'The popular belief is that this would be too expensive,' Rosenberg said.

'However, if only one house or road were saved from damage, then using a geologist would more than pay for itself.'

*** 29 - NEW SEISMIC IMPACTS FROM SAN GREGORIO FAULT.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
New Seismic Impacts from San Gregorio Fault.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The San Gregorio Fault is capable of an earthquake magnitude of 7.3.
It is very definitely the major fault west of the San Andreas in Central Coastal California. (USGS Researchers April 1999)

"The official seismic maps in Monterey County were drawn up in 1975.

Consulting geologist Lew Rosenberg, who has produced more recent maps says some of the faults are incorrectly mapped on the 1975 version, and the San Gregorio Fault, isn't even shown. But the process of getting the new maps accepted by the county as the 'official' maps, he said, is complicated and time-consuming even though they have been reviewed and accepted by his peers."
-Herald Oct 15 1999 Front Page "Mapping out the Big One"

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
New Seismic Impacts from San Gregorio Fault.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 30 - HAZARDOUS MATERIALS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Hazardous Materials.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Hazardous Materials include gasoline, explosives and pure chemicals.

- Monterey County Hazardous Waste Management Plan, 1989

Poisonous, corrosive, flammable or toxic materials.
Asbestos and infectious waste need special handling.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Hazardous Materials.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 31 - HAZARDOUS WASTE INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Hazardous Waste Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

In Monterey County in 1986, some 17,500 tons of hazardous waste were generated by major industries, small quantity generators (< 1 ton per source) and households (423 tons).

Monterey County's largest generators of haz waste were Texaco (10,300 tons), Soilserv (805 tons), PG&E-Moss-Landing (700 tons), Fort-Ord (278 tons), Mobil Oil (184 tons) and IDT (154 tons), Wilbur-Ellis (28 tons), Pacific Telephone and Telegraph (62 tons), Navy Postgraduate School (35 tons), Fort Hunter Liggett (27 tons), PG&E Alisal St. Service Center (33 tons), PG&E Griffin St. Service Center (39 tons), City of Monterey (31 tons), Sherwood Elementary School (29 tons), Soledad Prison (25 tons).
- Monterey County Hazardous Waste Management Plan, 1989

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Hazardous Waste Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 32 - EXPLOSIVE USE DURING CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Explosive Use During Construction.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Please describe (brand name and chemical name) the types of explosives used during construction?

How many pounds of each type of explosive will be used during construction?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Explosive Use During Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 33 - EXPLOSIVES AFTER CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Explosives after Construction.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Explosives after Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 34 - EXPLOSIVE TRANSPORTATION HAZARD.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Explosive Transportation Hazard.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Please detail what vehicles (trucks on specific roads, helicopters in
air) will transport each type of explosives.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Explosive Transportation Hazard.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 35 - EXPLOSIVE STORAGE HAZARD.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Explosive Storage Hazard.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Explosive Storage Hazard.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 36 - NOISE FROM EXPLOSIVE USE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Noise from Explosive Use.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Noise from Explosive Use.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 37 - NON-NOISE HUMAN HARM FROM EXPLOSIVE USE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Non-noise Human Harm from Explosive Use.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Humans can be harmed directly by the physical impact of an explosion's
shock wave or by debris from explosions.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Non-noise Human Harm from Explosive Use.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 38 - EXPLOSIVE USE - INDIRECT IMPACTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Explosive Use - Indirect impacts.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Explosive Use - Indirect impacts.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 39 - EXPLOSIVES - CONSTRUCTION IMPACTS ON SEA OTTERS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Explosives - Construction Impacts on Sea Otters.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Explosives - Construction Impacts on Sea Otters.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 40 - PROHIBIT EXPLOSIVES USE.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Prohibit Explosives Use.

* 41 - SPECIAL EVENTS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Special Events.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Special Events can cause many potentially significant environmental impacts including deaths, traffic congestion, loss of bus routes, parking loss, parking in residential neighborhoods, spectators trampling landscaping and native vegetation, littering, solid waste disposal, sewage disposal and its attendant smell, noise, and bomb threats.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Special Events.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 42 - SPECIAL EVENT TRAFFIC.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Special Event Traffic.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"There's a special event here just about every single weekend."
According to Brian Borgia owner of Monterey Peninsula Reservations in a July 3 1999 Herald article. Borgia also said the Concours in August and

the Indy Cars in September are the area's biggest hotel sellers.

The Pope's 1987 visit to the Monterey Peninsula had an EIR.

Desc	Dates	Tickets/Attendees	Roads

Out-of-Town participants, attendees and volunteers use significant amounts of water and cause significant traffic congestion which creates substantial air pollution.

SCRAMP boasts of "attracting more than 275,000 tourists to the area each year." Herald ad Nov 14 1999

"Expensive" events cause an increase in corporate jets (e.g. estimated 100 jets for the 2000 US Open).
"Expensive" events cause an increase in light trespass - light towers.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Special Event Traffic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 43 - SPECIAL EVENT BUS ACCESS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Special Event Bus Access.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Older residents who depend upon buses may not be able to walk the extra distance necessary to get to the relocated bus stops without causing health problems. That assumes they can find the relocated bus stops.

"Residents were also affected in that due to the restricted parking and street closure, access to downtown became difficult. This was particularly true for those dependant on MST bus ridership. As a result of the closure of Lighthouse Avenue, bus routes were rerouted causing some to miss connections to the final destinations or forcing long walks." Pacific Grove Beacon, Sept 29, 2000

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Special Event Bus Access.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 44 - SPECIAL EVENT PARKING.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Special Event Parking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Special events can attract thousands of people and thousands of cars
Those thousands of cars displace parking normally used by residents.
If an area is already at or beyond its parking capacity, evidenced by
residential parking permits, parking meters or timed parking - any
additional parking demand is a significant environmental impact.

Further special event parking can spill over onto sensitive habitat.
Vehicles can do long-term damage to soils preventing sensitive plant
species from regenerating.

At the 2002 ATT pro-am golf tournament volunteers were directing
spectators to park on places with signs explicitly warning to stay

off of the sensitive habitat.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Special Event Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 45 - SPECIAL EVENT WASTE.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Special Event Waste.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"There's not a whole lot of recycling occurring at those type of events
[special events such as the racing events at Laguna Seca Racetrack]."
-Jon Jennings, Monterey County Solid Waste Coordinator,
Herald, May 1,
2001 p A10

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Special Event Waste.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 46 - SPECIAL EVENT SEWAGE.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Special Event Sewage.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Special Events require sewage disposal. The smell from the porta-potties during the event and afterwards during pumpout can be overwhelming and can be smelled for many city blocks.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Special Event Sewage.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 47 - SPECIAL EVENT GENERAL USE PERMIT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Special Event General Use Permit.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

If the number of events is not limited or the number of attendees is not limited there can be thousands of people and thousands of cars showing up as often as daily. Those thousands of car trips cause enormous air pollution, parking problems and noise.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Special Event General Use Permit.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 48 - SPECIAL EVENTS BOMB THREATS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Special Events Bomb Threats.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Del Rey Oaks Police Chief Ron Langford is concerned about the threat of bombings because the Peninsula hosts "International Events". He said
"The consensus of Monterey County Police Chiefs is that we have to do something." There were nine bomb calls in 1999 as of July. In 1998 there
- were four, in 1997 there was only one. Such threats have caused the evacuation of several schools and neighborhoods, the Coast Guard pier, Fisherman's Wharf, the Marina Landfill, Lighthouse cinema, Monte Mart grocery store, the County Housing authority and CTB/McGraw Hill.
Some have exploded behind buildings at elementary schools, at high schools and in a minivan in a Salinas neighborhood. "It can take up to six hours for a bomb squad to respond to a call in Monterey County."
-Monterey Herald, July 25 1999, pg B1,2
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Special Events Bomb Threats.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 49 - SPECTATOR IMPACTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Spectator Impacts.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Spectators can trample vegetation and compact soils, increasing runoff and erosion.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Spectator Impacts.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 50 - NEW GOLF TOURNAMENTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
New Golf Tournaments.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Golf Tournament attendees include a lot more than just paid spectators.
Organizing Staff, Tournament players, Media, officials, volunteers and each of their guests. Each Player gets about 10 guest passes.

ATT Tournament Officials boast of selling more than 30,000 tickets per year.

Callaway Invitational @ Pebble Beach, Spyglass & Del Monte: Nov 18-21 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
New Golf Tournaments.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 51 - ENERGY CONSERVATION AND MORATORIUM ON NEW HOOKUPS.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Energy Conservation AND Moratorium on New Hookups.

Energy Conservation measures when accompanied with a new connection moratorium can reduce the amount of energy needed so a (Dam, or Nuclear Power Plant) is unneeded for electricity production.

Paradoxically Energy Conservation can actually increase Energy use.

1) Developers get all the Energy you save - and then some.

When electricity consumption is reduced through conservation, builders assert "Look at all that unused electricity. Give it to us for more development." Then the PUC, local land use authorities give it to the developers. This permanently increases the number of Energy connections and reinstates maximum electricity use.

Both of these activities increase the number of Energy connections and when the immediate threat of drought lessens - Energy use resumes at a higher level.

2) People who Conserve get less Energy during Rationing than those who don't.

The amount of Energy residential users are allowed during Rationing is

based on how much they normally use. Responsible consumers conserve and use less than a Energy waster. Yet those who waste Energy only have to cut back by the same percentage as those who have been conserving. So Energy wasters benefit by getting a higher use limit during rationing than those who conserve.

3) First, Residential Energy Bills go up.

The Electricity companies (i.e. PG&E) complain to the regulating agencies that they aren't selling as much Electricity as they used to - so they need to raise their rates. The PUC gives them a rate increase.

This shows how conservation can have its own harmful electrical service impacts. To alleviate this problem - a moratorium on new hookups must accompany a conservation effort.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 52 - INCREASED ELECTRICAL ENERGY DEMAND VS CAPACITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of

Increased Electrical Energy Demand vs Capacity.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

ELECTRIC EMERGENCY LARGEST IN 55 YEARS

As difficult as it may be to accept - all of us living in Monterey County, indeed all of us living in California, are laboring under an Electric Supply Emergency with no end in sight. The state government mandated local power blackouts we experienced the week of Jan 15, 2001 and which were front page news stories are additional proof of its reality.

"[California] Governor Gray Davis signed an emergency order late Wednesday authorizing the state to buy power to fend off further blackouts." Associated Press, Thurs. Jan 18, 2001

January 18, 2001 California Independent [Electrical] System Operators "declare an Electrical Emergency because of high demand and limited supplies." They begin two hour rolling blackouts.

State regulators imposed afternoon outages in northern California and came close to ordering the first statewide blackouts since World War II.

California uses 30 gigawatts of electricity at peak winter 2001 demand. California uses as much as 50 gigawatts during the summer when air conditioners are turned on. It was during the lower 30 gigawatt period that Northern California experienced intentional blackouts.

Since the electric supply is at and beyond capacity any further increase in demand is a potentially significant environmental impact.

We Were Warned
August 18 1998 California's Energy Commission analysis warns that the state could experience rolling blackouts as soon as Summer 1999 because of rising demand for electricity.

"Power Outages Feared"

July 14 1999 California Independent System Operator (Cal-ISO), which manages transmission for about 75 percent of California, reported that customers used a record breaking 45,884 megawatts of electricity. They issued a stage one emergency warning, which is when electricity operating reserves drops below 7 percent. A stage two is when the level drops below 5 percent. Below 5 percent reserve involuntary cuts to power would be likely according to Cal-ISO spokesman Patrick Dorinson.

Even though California's total electric demands have dropped, however slightly, from 1997 through 2000, the loss of energy capacity is caused by California Power companies selling more electricity out of state.

-Fred Keeley Assembly Speaker pro tem. Oct 2000

Electric Official's Bogus Promise

"The Con Ed system is in the best shape in fifteen years, and there's no problem about the summer." - Charles Luce (Board Chairman of Con Ed)
New York Television interview July 10, 1977

Impact - Traffic Deaths

One man was killed December 2000 in an automobile accident on Carmel Valley road near Highway 1 because the stop lights and street lights failed at 8:30 in evening.

Impact - Hospital Power Cut

Four San Francisco Hospitals had electricity cut Mar 19, 2001 even though they were supposed to be exempt from blackouts.

Impact - Widespread Looting

On July 13, 1977, three days after Luce's statement, a failure of the Con Ed system plunged the entire New York metropolitan area into a 24 hour blackout, which led to widespread looting.

Impact - Human Heating and Cooling

Lack of electricity to run home heaters and home air conditioners has killed many Americans.

INCREASE FROM FULL USE MEANS SIGNIFICANT ENVIRONMENTAL IMPACT

When a resource is fully used, or at capacity, any increase in demand is a potentially significant environmental impact under California's Environmental Quality Act (CEQA). It is also a potentially significant cumulative environmental impact.

An example of this is - Cal-Trans standard for a significant impact when an existing intersection is at LOS "F" [gridlock] is the addition of a single vehicle trip. "It is the Department's position that the addition of even one peak hour trip in a LOS environment represents a significant impact." (Cal-Trans letter dated Nov 18, 1997 to the Monterey County Planning Dept on the now approved September Ranch project.)

UNMITIGATABLE IMPACT

A demand increase is not merely a significant environmental impact - it is a significant environmental impact which is absolutely, wholly legally unmitigatable by cities and counties. That's because cities and counties have no legal authority to reduce electric demand by any energy consumer inside or outside their jurisdiction.

OVERRIDING CIRCUMSTANCES UNAVAILABLE

We find that you cannot legally make a finding of overriding circumstances except for new electric supply power facilities because of the significant increase in risk to public health and safety. We find there is no legal way around this significant and cumulative, unmitigatable environmental impact when basic safety and health concerns prohibit the use of overriding circumstances.

Please -

1. Graph the electric and gas capacity needed for the finished project starting with construction continuing through ten years of

operation.

2. Graph the electric supply and gas capacity available and permitted for the finished project.

3. Quantify the project's energy requirements and energy use efficiencies.

4. Quantify the project's effect on local and regional energy supplies.

5. Quantify the project's effect on peak and base period demands.

6. state the degree to which the project complies with existing energy standards.

7. state the project's depleting effects on energy resources.

8. Quantify the project's projected transportation energy use and its overall use of efficient transportation alternatives.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Electrical Energy Demand vs Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 53 - OVERLOADED ELECTRIC INFRASTRUCTURE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Overloaded Electric Infrastructure.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

An overloaded Electric Infrastructure occurs when the power lines cannot supply sufficient electricity without transmission failure.

"The second power outage in two days affected about 10,000 homes on the Monterey Peninsula Sunday." PG&E spokeswoman Maureen Bogues "said the outage was caused by an underground cable that may have overloaded because of Sunday's heat wave." On Saturday night, a power outage affected about 7,600 homes in Monterey and Pacific Grove. Herald May 22, 2000, p B3 "Record day for heat in Monterey" Ibid, p B1

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of

Overloaded Electric Infrastructure.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 54 - ENERGY ELECTRICAL DEMAND AND CAPACITY DURING CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Energy Electrical Demand and Capacity During Construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Please graph the electric and gas capacity needed through the construction phase of the project.

Please graph the electric and gas capacity available and permitted through the construction phase of the project.

1. Please state the project's construction phase energy requirements and energy use efficiencies;

2. the project construction phase's effect on local and regional energy supplies;

3. the project's construction phase effect on peak and base period demands;

4. the degree to which the project's construction phase complies with existing energy standards;

5. the project's construction phase effects on energy resources;

6. the project's projected construction phase transportation energy use and its overall use of efficient transportation alternatives.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Energy Electrical Demand and Capacity During Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 55 - ELECTRICITY INTERRUPTIONS TO OTHER CUSTOMERS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Electricity Interruptions to other Customers.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Electricity Interruptions to other Customers.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 56 - INCREASED GAS ENERGY DEMAND AND CAPACITY.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Increased Gas Energy Demand and Capacity.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Gas Energy Demand and Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 57 - SUBURBAN HEAT INCREASE.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Suburban Heat Increase.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Cities are warmer than natural lands because the thermal properties

of concrete, asphalt and glass are very different from vegetation, soil and waterbodies.

The heat of Mexico City "can exceed that in neighboring countryside by 8 to 10 degrees C." Nature, 6 Apr 2000, p 555

Warmer living areas (homes and businesses) use more energy for air conditioning.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Suburban Heat Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 58 - ADDITIONAL POWER LINES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Additional Power Lines.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Additional Power lines -
Risk human life in climbing power poles.
Risk human life when lines sag from high power delivery.

Risk fire from trees falling on live poles.
Tree sites exposed to Wind can have increased tree falls.
Risk from Power poles falling and exposing people and vegetation to dangerously high voltage.

Require constant tree and vegetation trimming. PG&E has 800 crews (not merely 800 staff) pruning 2 million trees per year. PG&E's Greg Holquist at California Pitch Canker Task Force meeting, 3/15/00)

Induce off road vehicle traffic under power poles.
Require insulator maintenance to prevent arc flashes.
In Monterey pine forest, tree removal and pine chipping increases bark beetle attacks on Monterey pine.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Additional Power Lines.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,

credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the

baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 59 - UNDERGROUNDING OF POWER TRANSMISSION AND DISTRIBUTION LINES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Undergrounding of Power Transmission and Distribution lines.

"In California, trees interfering with power lines are the second largest cause of power outages." University of California Cooperative Extension, Division of Agriculture and Natural Resources, Leaflet 21470

"Each year, hundreds of people throughout the United States are injured or killed when they climb or prune trees near power lines."

Undergrounding Power Transmission and Distribution lines -
- Does not risk fire from trees falling on live poles.
- Does not risk human life in climbing power poles.
- Does not risk human life when lines Sag.
- Does not risk from power poles falling and exposing people and vegetation to dangerously high voltage.
- Does not require constant tree and vegetation trimming.
- Does not induce off road vehicle traffic under power poles.
- Does not require insulator maintenance to prevent arc flashes.
- Already has a buried gas line along existing power lines.
- Do not experience power outages due to wind or trees.
- Do not experience power outages due to ice or snow.

* 60 - ELECTROMAGNETIC FIELDS (EMF).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Electromagnetic fields (EMF).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

EMFs increase Cancer
High levels of electromagnetic fields (EMF) can promote growth of cancers in laboratory animals (Science News 1/10/98, p 29) and some evidence links them to cancers in people (Science News 6/30/90, p 404).

EMFs and increased Heart Attack correlation
"Men in trades exposed to high EMFs - such as linemen and power plant operators - were far more likely to have died from heart attacks and heart conditions related to abnormal rhythms, or arrhythmias." Another study detected an increase in heart disease. (Science News 1/30/99).

Utility Transmission lines create up to 300 milligauss under the line.
Utility Distribution lines create up to 80 milligauss under the line.

A hair dryer can create 20,000 milligauss @ 1.2", or 70 mg @ 1 foot.
A microwave oven can create 2,000 milligauss @ 1.2", or 80 mg @ 1 foot.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Electromagnetic fields (EMF).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that

number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 61 - REMOVAL OF REDUNDANT POWER LINES.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Removal of Redundant Power lines.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 62 - PLANTING TREES FOR ENERGY CONSERVATION.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Planting Trees for Energy Conservation.

Trees play an important role in energy conservation by the modification of temperature extremes (cooling shade and nighttime warming insulation), humidity, and winds. This role is particularly important in reducing the amount of energy consumed in heating and cooling buildings and homes, and potentially in producing a local fuel and energy source.

-

* 63 - PLANTING TREES FOR NIGHTTIME WARMING INSULATION.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Planting Trees for Nighttime Warming Insulation.

-

* 64 - LIGHTING ENERGY WASTE.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Lighting Energy Waste.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

"We waste an astronomical amount of energy and money by all this bad lighting, shining it where it is not needed or wanted (including up into the sky) and by using energy inefficient light sources and lighting designs." (cite)

About 43 percent of energy use in the U.S. is unnecessarily wasted. Living in The Environment by G. Tyler Miller pg 439, Wadsworth Publishing 1998

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of Lighting Energy Waste.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 65 - POLLUTED WATER ENERGY WASTE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Polluted Water Energy Waste.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

When water is polluted it must often be boiled before drinking. This wastes energy.

About 43 percent of energy use in the U.S. is unnecessarily wasted.
Living in The Environment by G. Tyler Miller pg 439,
Wadsworth
Publishing 1998

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Polluted Water Energy Waste.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 66 - ENERGY EFFICIENT LIGHT SOURCES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Energy Efficient Light Sources.

Use energy efficient light sources. Light sources vary greatly in their efficiency. Consider especially the use of low pressure sodium lamps; they are the most efficient of all, and they are also strongly preferred by astronomers as the light output by LPS is essentially all one color and can be filtered out quite well. LPS is excellent for street lighting, parking lots, security lighting, and other applications where

color rendering is not critical. Careful lighting design can be done using LPS for essentially any application.

"It All Works. Such quality lighting design has been used for some time now in many locations. Such cities are benefiting by better lighting for their citizens, by a great deal of energy savings, and by darker skies (but not darker streets). We all really do win." For more info "<http://www.darksky.org/ida/key/intro.html>"

* 67 - LESSENNED POLICE AVAILABILITY.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Lessened Police Availability.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Lessened Police Availability.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 68 - FIRE RISK.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Fire Risk.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Monterey
Cannery Row is in a high fire risk zone according to the Monterey Fire Dept. The 12/98 DEIR for the Cannery Row Marketplace states " In the past 40 years, there have been approximately 30 fires on Cannery Row, 18 of which were considered to be major blazes."

Pebble Beach Forest

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Fire Risk.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 69 - LESSENE FIRE DEPARTMENT AVAILABILITY.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Lessened Fire Department Availability.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Annexations of County land to a city causes a drop in revenue to the Rural Fire Districts. Losses in revenue cause a decrease in ability to maintain fire protection services.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Lessened Fire Department Availability.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 70 - WATER PRESSURE TO FIRE HYDRANTS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Water Pressure to Fire Hydrants.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A standard fire flow pressure is 60 psi peak pressure with no pressures less than 40 psi. Pressures exceeding 110 psi are also unacceptable.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Water Pressure to Fire Hydrants.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,

credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the

baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 71 - WATER FLOW TO FIRE HYDRANTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Water Flow to Fire Hydrants.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The absolute minimum flow to adequately fight fires in residential structures is 1400 gallons per minute.
Cypress Knolls Retirement Project, Marina, Ca, Draft EIR Dec 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Water Flow to Fire Hydrants.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 72 - INCREASED DELAY FOR EMERGENCY VEHICLES.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Increased Delay for Emergency Vehicles.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Delay for Emergency Vehicles.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 73 - INCREASED DELAY ON EMERGENCY ROUTES TO HOSPITALS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased Delay on Emergency Routes to Hospitals.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Big Sur only has 2 2-lane automobile exit routes.

Carmel Valley only has 2 2-lane automobile exit routes.

Carmel has only 4 2-lane automobile exit routes.

Pacific Grove and New Monterey only have 6 automobile exit routes (7 outbound lanes). Three (3) of those are through the Presidio of Monterey. The Presidio is often closed for national security reasons leaving only three exit bottlenecks for a population of some 25 thousand people.

During an earthquake, a fire or an air pollution disaster the existing restricted exits could turn into gridlock escalating an emergency situation into a disaster.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Increased Delay on Emergency Routes to Hospitals.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 74 - REDUCED LIBRARY AVAILABILITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Reduced Library Availability.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Reduced Library Availability.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 75 - SCHOOL CAPACITY.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of School Capacity.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Do all potentially impacted schools have classroom capacity remaining?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of School Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 76 - CONSTRUCTION NOISE INTERFERENCE WITH SCHOOL ACTIVITIES.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Construction Noise interference with School Activities.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Noise interference with School Activities.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 77 - INTERFERENCE WITH SCHOOL ACCESS BY ROADWAYS OR CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Interference with School Access by roadways or construction.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Road construction can impede access to public facilities and create pedestrian safety hazards.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Interference with School Access by roadways or construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 78 - PARKS AND RECREATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Parks and Recreation.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Parks and Recreation.

1b. If no objective criteria are used please state that clearly.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 79 - RECREATIONAL POLLUTION.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of
Recreational Pollution.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Too many people using recreation areas can cause erosion, noise
sewage problems and water demand.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Recreational Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 80 - INTERFERENCE WITH PARK OR RECREATION ACCESS BY ROADWAYS OR CONSTRUCTION.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Interference with Park or Recreation Access by roadways or construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Road construction can impede access to public facilities and create
pedestrian safety hazards.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Interference with Park or Recreation Access by roadways or construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 81 - TEMPORARY DISRUPTION OF UTILITY SERVICES.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Temporary Disruption of Utility Services.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Temporary Disruption of Utility Services.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 82 - INCREASED RISK TO NEIGHBORHOOD CHILDREN FROM CONSTRUCTION VEHICLE TRAFFIC.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased risk to neighborhood children from Construction vehicle traffic.
- If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased risk to neighborhood children from Construction vehicle traffic.

*** 85 - INCREASED FIRE HAZARD & RISK FROM HAZARDOUS MATERIALS.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased Fire Hazard & Risk from Hazardous Materials.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Monterey Herald Headlines "Roofing Tar Trailer Explodes,"
"Residents Flee Salinas Vehicle Fire" Aug 5 1999
The article goes on to state "A Salinas neighborhood was evacuated
as flames engulfed a roofing truck..."
"...responding firefighters quickly upgraded it to a two-alarm fire
when they learned that it was a roofing truck laden with hot tar with a
propane tank on board."
"Firefighters were pumping three thousand (3000) gallons a minute of
water on the blaze to put it out and shield adjacent houses from the
high radiant heat of the flames." The truck was owned by
Williams Roofing
of Castroville.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact
significance of

Increased Fire Hazard & Risk from Hazardous Materials.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 86 - HAZARDOUS DESIGN FEATURES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Hazardous Design Features.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Sharp curves in roads and dangerous intersections can decrease vehicular safety.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Hazardous Design Features.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 87 - ROAD DAMAGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Road Damage.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

According to American Assn. of State Transportation Officials (AASTO)
[made up of the Dept. of Transportation heads in each state]-
-one truck loaded to the US legal limit of 80,000 lbs. has the impact on a point of highway as 9,600 cars.
Many states allow trucks much bigger than 80,000 lbs.
-AAA magazine Jan 2000

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of

Road Damage.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 88 - VEHICLE VISION OBSCURED BY TRUCKS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Vehicle Vision Obscured by Trucks.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

During wet conditions Trucks spray considerably more water into the air which can and does obscure vision through windshields of passenger vehicles.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Vehicle Vision Obscured by Trucks.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 89 - INTERFERENCE WITH EMERGENCY ACCESS BY ROADWAYS OR CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Interference with Emergency Access by roadways or construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Road construction can impede access by Emergency vehicles and impede exit of citizens leaving an emergency area.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Interference with Emergency Access by roadways or construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 90 - ARCHEOLOGICAL RESOURCES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Archeological Resources.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Sonoma State prepares Sensitivity Maps for areas in California.

What is the highest level of sensitivity for areas this project could affect? (There is no area with zero sensitivity)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Archeological Resources.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 91 - PALEONTOLOGICAL RESOURCES.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Paleontological Resources.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Paleontological Resources.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 92 - HISTORICAL RESOURCES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Historical Resources.

If you claim the document contains proof of no-significant-
impact for
this impact please explicitly state the page number and
paragraph.

Has anything newsworthy occurred on the site that put it on
the front page
of a local or larger newspaper?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
Historical Resources.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows
whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is
measured or assumed.

25. Please state whether this total PERCENT maximum
change is an AVERAGE amount, a worst case expected or a
best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to
which the impact would raise or lower the baseline number
and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is
measured or assumed.

28. Please state whether this total maximum change amount
is an AVERAGE amount, a worst case expected or a best
case expected.

29. Please list all potential CUMULATIVE impacts related to
this one.

30 Please describe all potential CUMULATIVE impacts
related to this one.

31. Please quantify all potential CUMULATIVE impacts
related to this one.

32. Please list, describe and quantify all potential compound
and synergetic impacts.

33. Please list, describe and quantify all Construction
impacts related to this one.

34. Please list, describe and quantify all Growth impacts
related to this one.

35. Please list, describe and quantify all Indirect impacts
related to this one.

36. Please list and quantify every OTHER IMPACT - this
impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the
RESOURCE this impact affects.

38. Please state the METHOD of measurement used to
determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence
level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or
assumed.

41. Please quantify what is the maximum amount (in
AMOUNT of existing) of this resource that can be lost and
still be restored.

42. Please quantify what is the MAXIMUM amount (in
PERCENTAGE of existing) of this resource that can be
LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed
this impact.

44. Please cite each expert's training, and peer reviewed,
validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this
impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this
impact.

48. Please list all other studies initiated by the applicant
related to this impact, including subject matter breadth,
author's names and dates and where they
can be examined.

* 93 - NATIONAL REGISTER PROPERTIES.

The Document appears to have ignored this potentially
significant Impact.
Please carefully analyze and disclose the potential impacts
of
National Register properties.

If you claim the document contains proof of no-significant-
impact for
this impact please explicitly state the page number and
paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
National Register properties.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 94 - BULLDOZING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Bulldozing.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Bulldozing causes noise, can leave geological scars, can dramatically increase soil erosion, and release asbestos when serpentine rock is affected (Sci Am Feb 2000, p 34), can induce invasive plants.

"Bulldozing away a forest can increase soil erosion by 10 to 1,000 fold.

The mud washed from a typical construction site can damage three miles of downstream waters with recovery taking up to a century." The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

Bulldozing for fire breaks and access can leave geological scars which never heal and cause increased erosion.

Heavy Construction Vehicles including Bulldozers and Graders make unrestricted, unregulated noise.

Bulldozing, including new road cuts and clearing old roads, leaves an excellent opportunity for introduction and enhancement of Pampas type grasses and Scotch and French Broom.

"In the Coastal fog belt of California, from Monterey County northward, Pampas type grasses and Scotch and French Broom are invading DISTURBED soils, grasslands, open woodlands and roadsides. They crowd out native plants and wildflowers, changing the appearance of the natural landscape, decreasing the food and habitats of wildlife and creating what many consider an eyesore." (Invasive Exotic Plants in Monterey County, brochure by Monterey County Planning Dept #293-0274 4/98)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Bulldozing.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 95 - ODOR FROM CONSTRUCTION VEHICLES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Odor from Construction Vehicles.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Odor from Construction Vehicles.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 96 - MAXIMUM NUMBER OF ACRES OF CONSTRUCTION PER DAY.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Maximum number of Acres of Construction per day.
- If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.
- According to the MBUAPCD, approximately 40 pounds of PM10 are emitted
per acre per day of construction activity.
- Please summarize the total number of days of construction.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Maximum number of Acres of Construction per day.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 97 - GOLF COURSE CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Golf Course Construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Hydrogen Peroxide is commonly used to prepare soil for a golf course.

Please describe whether Hydrogen Peroxide will be used to prepare the ground, if so how much will be used. If is not to be used, how its use will be prohibited and enforced.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Golf Course Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 98 - CONSTRUCTION ACCIDENTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Accidents.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Construction workers accidentally punctured a major sewer main, sending millions of gallons of raw sewage into Biscayne Bay at Miami Beach closing miles of beaches. AP June 21, 00

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Accidents.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 99 - CONSTRUCTION CAUSED EROSION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Caused Erosion.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Erosion caused directly by Construction would include heavy vehicles driving on unpaved dirt causing road ruts and off road ruts, runoff construction water AND dust mitigation water deepening those ruts.

Soil Erosion at a Construction site is 2000 times the rate of a natural forest. (Based upon the cover factor of the universal soil loss equation cited in Richard D. Klein's "Protecting the Aquatic Environment from the Effects of Golf Courses" Oct 1993)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Caused Erosion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 100 - CONSTRUCTION INDUCED EROSION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Induced Erosion.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Erosion induced by Construction would include rain deepening road ruts.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Induced Erosion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 101 - CONSTRUCTION PHASE STREAM SILTATION AND POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Phase Stream Siltation and Pollution.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Monterey County Grading Ordinance Section 16.08.300 (C)(2) states:

"No vegetation removal or grading will be allowed which will result in siltation of water-courses or uncontrollable erosion. (Ord 2534 Section 114, 1979)"

This law does not say that some siltation may be allowed - it says NO SILTATION may result from vegetation removal or grading. Please explain how you will absolutely prevent any Stream Siltation so this law is not violated.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Phase Stream Siltation and Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 102 - CONSTRUCTION PHASE SEDIMENT GENERATION.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Phase Sediment Generation.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- "Land disturbance during residential construction or construction of new
golf course facilities exposes bare soil to water and wind erosion,
surface crusting and loss of physical soil structure (Richards and
Middelton 1978). These conditions may result in significant
surface loss
of water, sediment and nutrients." Golf Course Management &
Construction, USGA 1992
- "Wolman and Schick (1967) determined that annual
sediment yield from
construction sites varies from 38 to 251 Mg ha-1 (17 to 112
tons ac-1)
of sediment annually." Water Resources Research 3:451-
464, Effects of
construction on fluvial sediment in urban and suburban areas
of
Maryland, Wolman M.G. and Schick, A.P. cited by Golf
Course Management &
Construction, USGA 1992.
- "Daniel et al. (1979) observed that annual sediment losses
from
residential construction sites ranged from 13.4 to 26.9 Mg
ha-1 (6 to 12
tons ac-1). On average, sediment yield from the construction
site was 20
times higher compared to adjacent agricultural watersheds." Daniel,
McGuire, Stoffel and Miller, Sediment and nutrient yield from
residential construction sites, Journal of Environmental
Quality
8(3):304-308 cited by Golf Course Management &
Construction, USGA 1992
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact
significance of
Construction Phase Sediment Generation.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.
- 3b. Please quote the definition used.

predictions are to reasonably foreseeable varying criteria and
assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that

number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 103 - CONSTRUCTION DAMAGE TO WILDLIFE HABITAT.

If any listed fish habitat (even a quarter acre) is lost even temporarily, this is a significant impact under CEQA Guideline 15065. The Steelhead trout and California Red-Legged Frog could lose habitat by construction cause erosion causing siltation or direct vehicle damage to habitat.

* 104 - CONSTRUCTION ACTIVITIES INCREASING FIRE DANGER.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Construction Activities Increasing Fire Danger.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Monterey Herald Headlines "Roofing Tar Trailer Explodes" "Residents Flee Salinas Vehicle Fire" Aug 5 1999
The article goes on to state "A Salinas neighborhood was evacuated as flames engulfed a roofing truck..."
"...responding firefighters quickly upgraded it to a two-alarm fire when they learned that it was a roofing truck laden with hot tar with a propane tank on board."
"Firefighters were pumping three thousand (3000) gallons a minute of water on the blaze to put it out and shield adjacent houses from the high radiant heat of the flames." The truck was owned by Williams Roofing of Castroville.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of Construction Activities Increasing Fire Danger.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 105 - MAINTENANCE ACTIVITIES INCREASING FIRE DANGER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Maintenance Activities Increasing Fire Danger.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Monterey Herald Headlines "Roofing Tar Trailer Explodes" "Residents Flee Salinas Vehicle Fire" Aug 5 1999
The article goes on to state "A Salinas neighborhood was evacuated as flames engulfed a roofing truck..."
"...responding firefighters quickly upgraded it to a two-alarm fire when they learned that it was a roofing truck laden with hot tar with a propane tank on board."
"Firefighters were pumping three thousand (3000) gallons a minute of water on the blaze to put it out and shield adjacent houses from the high radiant heat of the flames." The truck was owned by Williams Roofing of Castroville.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Maintenance Activities Increasing Fire Danger.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 106 - WATER DISTRIBUTION INFRASTRUCTURE CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Water Distribution infrastructure Construction.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Water Distribution infrastructure Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 107 - NEW SEWER SYSTEM CONSTRUCTION.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
New Sewer System Construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
New Sewer System Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 110 - CONSTRUCTION SITE AIR POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Site Air Pollution.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Construction Site Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 111 - CONSTRUCTION CHEMICAL USE AND SPILLS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Construction Chemical Use and Spills.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Accidental spills of hazardous materials or careless fueling or oiling of vehicles or equipment could degrade water quality or upland habitat to a degree where the ESA listed California Red-Legged Frog (*Rana aurora draytonii*) are adversely affected or killed." US-FWS Biological Opinion on Arroyo Seco Bridge Replacement. April 27 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Chemical Use and Spills.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 112 - CEMENT OR CONCRETE POURED OR MIXED IN OR NEAR STREAMS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Cement or Concrete Poured or Mixed In or Near Streams.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"The contamination of the stream by wet concrete could cause potential skin and respiratory system irritation in the California Red-Legged Frog (*Rana aurora draytonii*)."
US-FWS Biological Opinion on Arroyo Seco Bridge Replacement. April 27 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Cement or Concrete Poured or Mixed In or Near Streams.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 113 - CONSTRUCTION MATERIALS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Construction Materials.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Creosote is used to preserve railroad ties. Railroad ties are often recycled as fences, retaining walls and bridge surfaces.

CREOSOTE is on California's Prop 65 List of Known Carcinogens. Creosote is a wood preservative on EPA's list of materials classified as restricted use in 1985. It is in the Group B1 Pesticides "Probable Human Carcinogens with Limited Human Evidence"

"Restricted Use" means:
"A pesticide that is available for purchase and use only by certified pesticide applicators or persons under their direct supervision. This designation is assigned to a pesticide product because of its relatively high degree of potential human and/or environmental hazard."

Source: www.epa.gov/pesticides/carlist/table.htm updated June 11, 1998
Creosote also has a powerfully repugnant smell that lasts years and on hot days can be detected dozens of meters from the source.

Please discuss all uses and especially distances from water, wetlands or other wild habitat and the potential impacts on threatened and endangered species.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Materials.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 114 - CONSTRUCTION PESTICIDE USE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Pesticide Use.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Pesticide Use.

- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 116 - CONSTRUCTION PETROCHEMICAL USE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Construction Petrochemical Use.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Petrochemical Use.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 117 - CONSTRUCTION PETROCHEMICAL SPILLS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Construction Petrochemical Spills.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Petrochemical Spills.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 118 - CONCRETE LEACHATE AND PARTICULATE LEAKS AND SPILLS.**

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of
Concrete Leachate and Particulate Leaks and Spills.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Concrete Leachate and Particulate Leaks and Spills.

1b. If no objective criteria are used please state that clearly.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 121 - ROAD DUST CONTROL AGENTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Road Dust Control Agents.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Road Dust Control Agents.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 122 - CONSTRUCTION CHEMICALS DISPOSAL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Chemicals Disposal.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Construction Chemicals Disposal.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 123 - LEFTOVER TRASH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Leftover Trash.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Trash left during or after project activities could attract predators such as raccoons to work sites which in turn could harass or prey on the listed [California Red-Legged Frog (*Rana aurora draytonii*)]."
US-FWS
Biological Opinion on Arroyo Seco Bridge Replacement. April 27 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Leftover Trash.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 124 - GROWTH IMPACTS ON EACH LISTED SPECIES AND THEIR HABITATS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Growth Impacts on each Listed Species and their Habitats.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Growth Impacts on each Listed Species and their Habitats.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 125 - GROWTH IMPACTS ON RED-LEGGED FROG AND THEIR HABITATS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Growth Impacts on Red-Legged Frog and their Habitats.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Growth Impacts on Red-Legged Frog and their Habitats.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
 9. Please state the variance's MARGINS of ERROR or confidence level.
 10. Please state whether this MARGIN of ERROR is measured or assumed.
 11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.
 44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 127 - WILDLAND FIRE INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Wildland Fire Increase.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

When an area grows in human population the number of fires increases.

"For much of this century, wildland fire frequency has been driven by population density (Fig 4); more people on the landscape equals more fires." Historic Fire Regime in Southern California, Keeley, J. & Fotheringham C., Dec 2001, Conservation Biology.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Wildland Fire Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 128 - TOURISM.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Tourism.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Tourism's impacts include traffic congestion, parking loss, increased garbage, increased noise and loss of visual aesthetics.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Tourism.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal

laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 129 - TOURISM IN PARKS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Tourism in Parks.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"During the height of tourist season, certain regions within [the U.S.'s most popular] parks are overwhelmed with congested traffic, vandalism, of natural and cultural features, noise, air pollution, and litter. As ever more and more people flock to popular scenic attractions, they cause ever-widening circles of destroyed vegetation and compacted soil. Millions of feet are wearing down the hiking trails and making them more subject to erosion." Environmental Science, M,M & W, 1993

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Tourism in Parks.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.

- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 130 - HUMAN CAUSED NOISE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Human Caused Noise.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

All increases in human civilization cause large increases in noise.
Major noise sources include construction, cars, buses, trucks and aircraft.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Human Caused Noise.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 131 - PRESENCE OF DOMESTIC PETS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Presence of Domestic Pets.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Kill, Take, Harassment of Threatened Species
This is a known significant impact on ESA listed birds which nest on the ground or coastal beaches as Snowy plovers do. Dogs killed several nesting Snowy plovers in 1999 on Monterey Peninsula beaches -Audubon Society, Monterey Peninsula Chapter

Domestic cats are well known to kill neighborhood birds and small mammals. When cats live adjacent to wilder areas - their impact creates an edge effect into the wilder area.

"Rats and feral cats have eliminated ground nesting birds in many areas, including Jamaica, Australia, New Zealand, and the Galapagos Islands."
Environmental Science; Morgan, Moran & Weirsmas; W.C. Brown Pub. 1993

Dogs typically chase (harass) wildlife, especially birds.

KILLING OF PROTECTED SPECIES BECAUSE OF DOMESTIC ANIMALS
When houses are built near a wild area, the presence of domestic cats and other outdoor animals can attract mountain lions. Even though mountain lions are fully protected in California, California's Department of Fish and Game always issues a kill (depredation) permit when a mountain lion kills a domestic pet.

False Mitigation
As mitigation to this Monterey County responded that all cats would be required to remain on a leash. The National Council of Teachers of English found the leash idea so ludicrous they featured it their July 1997 edition of the Quarterly Review of Doublespeak.

Horse's fecal matter attracts large numbers of flies.
"Fermenting, fresh, horse manure is the chief breeding place of the housefly. Houseflies are known to carry the disease organisms causing

typhoid fever, cholera, summer diarrhea, dysentery, tuberculosis, etc, just to name a few." Handbook of Pest Control", Arnold Mallis, 1945

Feral Animals

Often cats and dogs are abandoned as owners move away.

Forests near induced edges, for example, may have a higher density but lower diversity of birds than the interior forest. A number of studies have shown increased predation of songbird and quail eggs near forest edges. The predation is worst near developed areas (which might have unnaturally high populations of cats, raccoons, skunks, jays and crows)." - Mitch Lansky "Beyond the Beauty Strip"

Noise

A dog's bark is particularly annoying when the area is relatively quiet. "Very Large Dogs, Barking and Howling" can generate 85 decibels. National Institute Deafness, Acoustic consultants and airport consultants, cited by E. Knapp AIA, Architect - Analyst, Eagan MN, Specialist in Animal Facility Design & Planning.

Dogs Barking can make 80 dbA at 10 meters. from "Operational Conditions for Continuous Mining Systems in Hard Rock Open Pit Mines", 15-08-1996

Pesticides

American's spend more than 1 Billion dollars a year battling pet fleas and ticks with toxic chemicals. These poisons settle in homes and yards, eventually making their way into landfills which EPA admits cannot be sealed from leakage, rivers, streams and the water table. Their active ingredients include Diazinon, carbaryl, propoxur, and DDVP - all nerve poisons.

Cat Feces and Kitty Litter

"Clay Kitty litter, which is strip mined, contains silica dust - a carcinogen." Apparently no-toxic and flushable methods include wood-based pellets, zeolites and wheat grass pellets. Sierra Magazine Sept 1999 pg 27 (Adult cats can use 250 pounds of kitty litter waste per year per cat.)

"Cat feces contain toxic bacteria and should never be composted." Sierra Magazine Sept. 1999 pg 27

Pet Roundworms

"Roundworms from domestic dogs have caused serious illness for many more people than raccoon roundworms." Donald Burton, Veterinarian and Executive Director of the Ohio Wildlife Center in Columbus Ohio.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Presence of Domestic Pets.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 132 - EXISTENCE OF POWER LINES.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Existence of Power Lines.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

A non-trivial percentage of many listed bird species (Condors, eagles, Peregrine falcons) have been killed by their contact with power lines.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Existence of Power Lines.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 133 - INCREASED SHOOTING OF ANIMALS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Increased Shooting of Animals.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Increased Shooting of Animals.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.	26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	Please carefully analyze and disclose the potential impacts of Fences Harming Special Status Wildlife.
5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.	27. Please state whether the MARGIN of ERROR is measured or assumed.	If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.	28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.	Birds that fly close to the ground can be harmed and killed by fences.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.	29. Please list all potential CUMULATIVE impacts related to this one.	QUANTIFICATION OF BASELINES AND IMPACTS:
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.	30. Please describe all potential CUMULATIVE impacts related to this one.	This impact appears to be potentially significant.
9. Please state the variance's MARGINS of ERROR or confidence level.	31. Please quantify all potential CUMULATIVE impacts related to this one.	1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Fences Harming Special Status Wildlife.
10. Please state whether this MARGIN of ERROR is measured or assumed.	32. Please list, describe and quantify all potential compound and synergetic impacts.	1b. If no objective criteria are used please state that clearly.
11. If an average is used, please state which kind of average.	33. Please list, describe and quantify all Construction impacts related to this one.	2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
12. Please state the most extreme values which could be encountered.	34. Please list, describe and quantify all Growth impacts related to this one.	3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.	35. Please list, describe and quantify all Indirect impacts related to this one.	3b. Please quote the definition used.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.	36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.	4. If no measurement units are used please state that clearly.
15. Please provide a graph of HISTORICAL measurements.	37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.	5a. Please state the METHOD of measurement used to determine the significance for each criteria.
16. Please quantify the length of time this impact would last.	38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.	5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.	39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.	6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.	40. Please state whether the margin of error is measured or assumed.	7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.	41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.	8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
20s. Please state whether this MARGIN of ERROR is measured or assumed.	42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.	9. Please state the variance's MARGINS of ERROR or confidence level.
20b. If no margin of error is used please state that clearly.	43. Please name each EXPERT who prepared and reviewed this impact.	10. Please state whether this MARGIN of ERROR is measured or assumed.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.	44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.	11. If an average is used, please state which kind of average.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.	45. Please provide AVOIDANCE MITIGATION for this impact.	12. Please state the most extreme values which could be encountered.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	46. Please provide the reverse of this impact as Mitigation.	13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
24. Please state whether the MARGIN of ERROR is measured or assumed.	47. Please provide an ALTERNATIVE which avoids this impact.	14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.	48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.	15. Please provide a graph of HISTORICAL measurements.
	-	16. Please quantify the length of time this impact would last.
	* 134 - FENCES HARMING SPECIAL STATUS WILDLIFE.	17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
	The Document appears to have ignored this potentially significant Impact.	

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 135 - ENHANCEMENT OF ALIEN SPECIES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Enhancement of Alien Species.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Biological pollution" of exotic or non-native species can cause the loss of habitat for ESA listed plants and animals. "More than 1000 exotic plants have been introduced in [California] since 1769. Eucalyptus is one of about 50 plants that have escaped cultivation and now run roughshod over wild areas." Associated Press Sept. 26 1999

Bulldozing, including new road cuts and clearing old roads, leaves
an excellent opportunity for introduction and enhancement of Pampas type
grasses and Scotch and French Broom.

"In the Coastal fog belt of California, from Monterey County northward,
Pampas type grasses and Scotch and French Broom are invading DISTURBED
soils, grasslands, open woodlands and roadsides. They crowd out native
plants and wildflowers, changing the appearance of the natural
landscape, decreasing the food and habitats of wildlife and creating
what many consider an eyesore." (Invasive Exotic Plants in Monterey
County, brochure by Monterey County Planning Dept. #293-0274 4/98)

California harmful exotics and non-natives include:
French Broom (Cytisus monspessulanus)
Pampas Grasses (Cortaderia jubata and Cortaderia
sellowiana)
Scotch Broom

"Broom forms dense thickets in many habitats, shading out native flora
and tree seedlings and can limit access to recreational trails for
hiking, fishing and horseback riding." (Invasive Exotic Plants in
Monterey County, brochure by Monterey County Planning
Dept. #293-0274
4/98)

Bullfrog - eats tadpoles of the federally listed California Red-Legged
Frog (Rana aurora draytonii).

Bluegum Eucalyptus - which sheds bark and leaves, chokes out native
plants reducing food for owls, deer and other animals. They spread so
quickly they become fire hazards contributing to the Oakland Hills fire
in 1991 which killed 16 people and destroyed 3000 homes.

Green Crab (Carcinus maenas) - eats native clams, oysters and other
crabs. It threatens some birds, fish and other crabs by eating their
food supply.

Hydrilla (Hydrilla verticillata) - clogs waterways, blocks light for
other plant species and reduces fish spawning and feeding areas.

Flathead Catfish - eats chiefly other fish including endangered species.
Dandelions

Nutria - "devastating wetlands and habitat for Bald Eagles"
AP Sept. 26
1999.

"Rats and feral cats have eliminated ground nesting birds in many areas,
including Jamaica, Australia, New Zealand, and the Galapagos Islands."
Environmental Science; Morgan, Moran & Weirsm; W.C.
Brown Pub. 1993

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Enhancement of Alien Species.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 136 - IMPORTING NON-NATIVE SPECIES AS MITIGATION.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of

Importing non-native species as Mitigation.

"In Hawaii, the carnivorous rosy wolf snail was imported to kill the giant African tree snail. Instead it has pounced on 800 local mollusk species, driving more than 50 to extinction since the mid-1950's" AP Sept 26 1999

-

* 137 - TRAILS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Trails.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Trail use by humans can cause erosion, wildland and forest fires, introduction of invasive and exotic species, harassment of and deaths of wildlife including birds, damage to wildlife burrows, spread of exotic disease bearing feces, increase in disease transmitting flies and harm to tree roots, littering and dust.

Dogs chase, harass and kill wildlife including birds, dig up wildlife burrows and spread invasive disease bearing feces. Dogs can cause loud annoying noise by barking (85 dbA). Pets are often prohibited from US National Park trails (i.e. Kings Canyon Nat. Park).

Pack animals (Horses/burros/mules/donkeys/llamas) can cause significantly more trail and wilderness damage than humans alone. They have a higher weight per square inch and a higher total weight load which can turn soils to dust and kill all plant and microscopic biota in the trail corridor. They often travel in trains of many animals, kick up significantly more dust than human hikers, can stampede and endanger humans, cut and sever tree roots and leave huge quantities of feces which attract and breed flies which transmit diseases to humans and wildlife.

Please quantify the daily feces load introduced into the area.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Trails.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 138 - FECES CAPTURE SYSTEM.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Feces Capture System.

Pack animal and pet feces can be easily captured or removed by the human in control of the animals. Pack animals can be fitted with a bag to capture feces before it hits the ground. Dog feces can be gathered in plastic bags after they defecate. Some cities (New York, NY; Carmel, CA) require such efforts.

-

* 139 - HUMAN CREATED TRAILS MAKING STREAMS CAUSING EROSION.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Human Created Trails Making Streams Causing Erosion.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Trails made by wildlife, especially ungulates normally traverse a slope at a given altitude, rarely significantly ascending or descending a slope. In contrast human created trails often go directly up or down a slope causing loss of vegetation and literally creating new streams and associated erosion.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Human Created Trails Making Streams Causing Erosion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 140 - HUMAN CREATED TRAILS HARMING TREE ROOTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Human Created Trails Harming Tree Roots.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Human created trails near trees and in forests often exposes roots of trees to the air. The roots are further damaged by continued abrasion from human walkers (Pt. Lobos has many examples of tree roots exposed and now damaged by trails. Tree roots need mycorhyzie fungi to help trees absorb water and phosphorus. When tree roots are exposed from trails over them the mycorhyzie fungi on exposed tree roots dies due to abrasion, exposure and lack of water and the tree suffers. - Biology (textbook 1984), H. Curtis pg 452

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Human Created Trails Harming Tree Roots.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
- * 141 - LAWNS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Lawns.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Daily cutting of thousands of acres of golf courses and weekend cutting
of hundreds of thousands of urban household lawns can release
significant amounts of VOCs and carcinogenic air pollution.
- The drying of lawn clippings released formaldehyde, methanol, acetydehyde, acetone and other gases. The drying of millions of acres
of cut alfalfa "could be quite a point source of [Volatile Organic
Compound (Ozone precursor) pollution]." SciNews Apr 3, 99
citing
Geophysical Research Letters, April 1, 99
- "Nationwide, lawns cover 25 to 30 million acres, an area larger than
Virginia, and suburbanites use up to two and a half times more pesticides
per acre than do farmers to keep their lawns weed free." US
News and
World Report July 29 1991.
- Those lawn pesticides and fertilizers run off into streams - the
- pesticides harming aquatic life and the fertilizers enhancing algal blooms.
- Lawns need lawnmowers (many lawnmowers barely start because they are so badly tuned) which spew out large amounts of unregulated and unburned
air pollution fumes.
- Lawn clippings are normally sent to the town dump rather than used
as compost.
- The drying of lawn clippings released formaldehyde, methanol, acetydehyde, acetone and other gases. The drying of millions of acres
of cut alfalfa "could be quite a point source of [Volatile Organic
Compound (Ozone precursor) pollution]." SciNews Apr 3, 99
citing
Geophysical Research Letters, April 1, 99
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Lawns.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 142 - INTRODUCED (INVASIVE) SPECIES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Introduced (Invasive) Species.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Invasive species are those which were not previously known in an ecosystem and then out compete native species sometimes causing their extirpation or extinction.

In the late 1980s, zebra mussels (*Dreissena polymorpha*) invaded Lake St. Clair, probably hitchhiking in the ballast water of a commercial ship arriving from Europe. Within a few years, they were abundant enough to temporarily shut down the water supply of Monroe, Michigan. Power plants, water treatment facilities, and factories in New York, Ohio and Michigan faced drastic reductions in their water intake due to mussel-clogged pipes. Total projected costs turned out to be between \$750 million and \$1 billion.

Scientists estimate that about 7,000 invasive species of plants,

mammals, birds, amphibians, reptiles, fish, arthropods and mollusks are now established in the United States. Examples range from the chestnut blight - which killed almost every American chestnut on the continent within a few decades - to more recent problems, such as zebra mussels, purple loosestrife, leafy spurge, yellow starthistle, the Asian long-horned beetle, and whirling disease in salmon and trout. These species cost billions of dollars annually in damage and control measures. - Union of Concerned Scientists

"The greatest single paroxysm of extinction ever recorded" was caused by stocking Lake Victoria with the aggressive Nile Perch in the 1960's. This single species led to the disappearance of as many as 200 species of native cichlid fish.

Other disastrous introductions include the rosy wolf snail which led to at least 15 Hawaiian endemic snail species; and the brown tree snake to Guam which is the probable primary cause of 9 native birds, 5 native lizards and 2 of only 3 bat species. "The Science of Invasive Species" Nov 2001 report, Union of Concerned Scientists.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Introduced (Invasive) Species.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 143 - URBANIZATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Urbanization.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Cities cause measureable climate impacts compared to rural areas.

Temperature -
Annual mean 0.5 - 30 deg. C more

Humidity -
Annual mean 6% less

Contaminants -
Particulates 10 times more
Gaseous admixtures 5-25 times more

Cloudiness -
Fog, winter 100% more
Clouds 5-10% more
Thunderstorms 10-15% more

Sunshine duration 5-15% less

- Cambridge University Press 1993 FactFinder

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Urbanization.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 144 - COMMERCIAL SPACE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Commercial Space.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Commercial Space generates 35 average daily one way trips per 1000 square feet of floor space according to City of Monterey Final Environmental Impact Report on the Rohr Hotel, 1983.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Commercial Space.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 145 - GOLF COURSES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Golf Courses.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Golf Courses have adverse environmental impacts including high water use, fertilizer runoff, pesticide harm, air pollution and soil erosion.

"The potential detrimental effects associated with golf course

construction and maintenance have been identified as the following:
(from USGA's 1993 book "Golf Course Management and Construction" p 22)

1. Contamination of surface water with sediment and nutrients during turfgrass construction.

2. Potential contamination of runoff water and groundwater with applied nutrients and pesticides.

3. Development and resurgence of pest populations with increasing resistance to chemical control.

4. Potential negative impacts of chemical management on beneficial soil and nontarget organisms.

5. Potentially toxic effects of applied chemicals to nontarget plants and animals.

6. Excessive use of water resources during drought conditions and in semiarid and arid climatic zones.

7. Loss or degradation of wetland resources during construction and turfgrass maintenance." pgs 22-23

Other impacts include -
"the potentially toxic effects of applied chemicals on beneficial nontarget soil organisms and aquatic systems, degradation of stream and lake quality resulting from sediment, chemical and thermal pollution, disturbance and toxicity impacts on wildlife."
-Preface to Golf Course Management and Construction

"As a whole, I think anytime you open a new public course, you take away 40,000 rounds from other courses," said Rancho Canada head professional Todd Ponti. Herald, Mar 14, 2001 Joe Priddy, director of golf at Bayonet/Black Horse facility and R.J. Harper of Pebble Beach Co agreed.

The National Golf Foundation 2000 report "A Strategic Perspective on the Future of Golf" shows that "during the 1980s there were more golfers than golf courses. Within the past 10 years however, the continued introduction of new courses has forced supply higher than demand."

The drying of lawn clippings released formaldehyde, methanol, acetylidehyde, acetone and other gases. The drying of millions of acres of cut alfalfa "could be quite a point source of [Volatile Organic Compound (Ozone precursor) pollution]." SciNews Apr 3, 99 citing Geophysical Research Letters, April 1, 99

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Golf Courses.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 146 - HOTELS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Hotels.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Hotels cause an increase in traffic, air pollution, noise, and light pollution and a decrease in water supplies and impermeable surfaces.

Hotels generate seven (7) average daily one way trips per hotel room according to City of Monterey Final Environmental Impact Report on the Rohr Hotel, 1983.

Meeting Rooms generate 38 average daily one way trips per 1000 square feet according to City of Monterey Final Environmental Impact Report on the Rohr Hotel, 1983.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Hotels.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 147 - RESTAURANT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Restaurant.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Restaurants use water, parking capacity, traffic capacity, can generate solid waste for landfills, grease pollution in sewer lines, light pollution, noise pollution.

Restaurants generate 2.5 average daily one way trips per seat according to City of Monterey Final Environmental Impact Report on the Rohr Hotel,

1983.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Restaurant.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 148 - SEWER LINE EXTENSION.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sewer Line Extension.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Extending sewer lines induces growth.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Sewer Line Extension.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 149 - NATURAL SEWAGE SYSTEM.**

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of
Natural Sewage System.

An alternative sewer treatemnt plant in the town of Benton uses a rock-reed filtration system. It has no unpleasant odor, needs no tons of concrete or miles of iron pipe or massive mechanical equipment, uses almost no electricity and no chemicals. It does not breakdown and interrupt service. Audubon's 1994 Almanac of the Environment. pg 29

Arcata California hasa natural sewage treatment system.

This Alternative does not require any non-off-the shelf technology.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 150 - STORAGE FACILITIES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Storage Facilities.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

As affordable housing decreases (rent and home price per square foot rising) - residential storage needs increase.

Mini-storage facilities (6 foot by 6 foot - up to house size) consume several acres of land per project, don't offer much revenue, are last in job creation and gobble up prime commercial and industrial zoning areas.
- Salinas & Marina City officials quoted in Herald article Mar 29 2000

Salinas' thriving mini-storage market comes primarily from migrant farm workers and people who own small homes.

Service stations bring in \$1.50 per square foot in taxes, while mini-storage facilities only bring in about \$0.02 per square foot.

The national average for mini-storage is about 3.5 square feet per resident. Marina averages 10 square feet / resident.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Storage Facilities.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 151 - PARKING CAPACITY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Parking Capacity.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

As Parking availability decreases governments typically pass increasingly
stronger measures to limit parking and charge for it.
In rural areas parking limits and costs are negligible.

Usually the first parking restriction action taken is to paint lined
parking spaces. Sometimes a decision between diagonal and parallel
parking occurs.

A second stage is to limit parking time in lined spaces. The city then
begins to get revenue with parking tickets.

A third stage is to install parking meters. City revenue jumps.

A fourth stage is building parking lots.

MUSICAL (Parking) CHAIRS
Moving Parking Problems from one place to another does not reduce
cumulative parking demand. A given street in a neighborhood can only
park so many cars at one time. Once that threshold is reached - any
further increase in parking demand is like the game of musical chairs.
Once a specific block, street or neighborhood has reached or exceeded
its capacity limit for parking, the addition of a single car wishing
to park is a significant impact. That additional car must park further
than the local area thus impacting other areas which may have parking
capacity problems as well or diminishing the other area's parking spaces.

Three types of Parking
Free parking, Paid Public Parking and Private Parking

Please define parking capacity in spaces per block.

Please identify which blocks, streets and neighborhoods have reached
or exceeded their Free parking capacity.

Please identify which blocks, streets and neighborhoods have reached
or exceeded their Paid Public parking capacity.

If there is any free public parking capacity remaining, please explain how that remaining will be proportioned out to residential
uses, public uses and for commercial or other intensive uses.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Parking Capacity.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 152 - PARKING DURATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Parking Duration.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Parking has at least two independent dimensions, each of which must be accounted for - the number of spaces and the time parked in each space.

Parking Duration is an additional dimension of parking - it is independent of the number of parking spaces.

To illustrate - if you have 10 parking spaces that are only used for 5 - 10 minutes each (such as at a Post Office), you can accommodate between 60 to 120 vehicle parking events per hour.

On the other hand if each vehicle parks for an hour, you can only accommodate 10 vehicles parking per hour. The remaining 50 to 110 vehicles exceed the parking capacity and overflow parking into other areas.

The IMAX theatre proposed for Cannery Row claims that 85% to 90% of their attendees would come from people already visiting the Aquarium and so no (or extremely few) additional parking spaces are needed.

The fallacy is that in order to visit both places - they have to park longer. This would exceed the parking capacity of Cannery Row and overflow parking into other areas.

How will the average length of (parking) stay increase as a result of the proposed project?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Parking Duration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 153 - TOTAL PARKING DEMAND INCREASE DUE TO GROWTH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Total Parking Demand Increase Due to Growth.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

More houses mean more cars, which mean more parking demand.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Total Parking Demand Increase Due to Growth.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 154 - FREE-PARKING DEMAND INCREASE DUE TO GROWTH.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Free-Parking Demand Increase Due to Growth.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Carmel, Monterey and Pacific Grove parking is beyond capacity as evidenced by the issuance of neighborhood parking passes by all three towns.

People often increase neighborhood traffic when trying to find free parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Free-Parking Demand Increase Due to Growth.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 157 - HOTEL PARKING.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Hotel Parking.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Five parking spaces per thousand square feet of retail shops is a measure typically used by California cities.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Hotel Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 158 - CONSTRUCTION PARKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Construction Parking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Parking needs increase during construction.

Construction vehicles, construction support vehicles, and construction worker's personal vehicles need to park somewhere and can fill a

residential street's parking spaces. This impact is real, however temporary it is. On the other hand some construction can last 15 years or more (Cannery Row's Rohr Hotel or Gin Wong in Monterey California).

Construction of a single house on Arena Ave. in Pacific Grove, California drew some 22 parked trucks and cars, a trailer and one heavy construction vehicle - a backhoe. The vehicles parking on both sides of the street reduced the road from two lanes to one. Only one vehicle was parked off road in the driveway.

Please list and quantify all construction vehicles types (e.g. trucks, bulldozers, backhoes, delivery vehicles and their trailers, cranes) which will use on street parking and the duration of their stay in maximum days.

What is the maximum number and average number of employee vehicles which will use offsite parking at the project site.

What is the maximum duration of construction?

Please use these criteria to measure this impact: mapped area of parking, vehicle lengths, number of occurrences per day per vehicle, rate, duration of parking per vehicle.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Construction Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 159 - PARKING LOTS CAUSING TRANSIT AND PEDESTRIAN IMPACTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Parking Lots Causing Transit and Pedestrian Impacts.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

"Large expanses of land devoted to parking make it difficult to achieve transit and pedestrian friendly design. Where large parking lots are necessary, breaking them up into pedestrian-scaled blocks, complete with curb, sidewalk and landscaping promotes a pedestrian friendly environment." Department of Transportation letter June 3, 1996 to City of Capitola on Capitola Crossing Project.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Parking Lots Causing Transit and Pedestrian Impacts.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 160 - DELIVERY VEHICLE PARKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Delivery Vehicle Parking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Delivery vehicles almost always use diesel engines.
Delivery vehicles often leave their engines running during deliveries.
Stopped, running Delivery vehicles have impacts from the exhaust, noise
and "parking" if you can call stopping in a roadway parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Delivery Vehicle Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 161 - SPECIAL EVENT PARKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Special Event Parking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"There's a special event here just about every single weekend."
According to Brian Borgia owner of Monterey Peninsula Reservations in a
July 3 1999 Herald article. Borgia also said the Concours in August and

the Indy Cars in September are the area's biggest hotel sellers.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Special Event Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 162 - TOURIST PARKING.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Tourist Parking.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

The neighborhoods surrounding the Aquarium are so impacted from parking that Monterey, Pacific Grove and Carmel have instituted residential parking permits. The parking along the ocean side of Pacific Grove's portion of the coast walkway from Lover's point to about 4th street is filled with parked cars almost every weekend of the year. Some degree of that parking impact is from Aquarium employees, volunteers and customers.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Tourist Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 163 - HOLIDAY PARKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Holiday Parking.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Tourist areas, such as the Monterey Peninsula, advertise to get more business during holiday weekends. The increased number of visitors increases the parking demand and decreases the available parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Holiday Parking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 164 - RESIDENTIAL PARKING INTRUSION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Residential Parking Intrusion.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Downtown Carmel has long been avoided by locals because the traffic and parking downtown is unavailable. This has pushed commercial parking into neighborhoods without commercial uses (e.g. Casanova btw Ocean and 4th).
This is recognized in the General Plan pg 2-24

Commercial parking intruding into residential areas is strictly forbidden by Carmel's Ordinance 29 "business development should forever be subordinate to the residential character of the community." General Plan pg 1-8.
Business zoning density must be reduced until this conflict is eliminated.
As a contrast - beach parking which intrudes into residential areas does not conflict with Ordinance 29 because beach parking is not commercial.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Residential Parking Intrusion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 165 - PARKING SPACE PAVING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Parking Space Paving.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Paved Parking Spaces increase impervious surface areas. Asphalt (vs concrete) paved areas cause oil runoff and hydrocarbon air pollution.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Parking Space Paving.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 166 - VALET PARKING.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Valet Parking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Valet parking increases the risk of automobile accidents as the valets typically drive much faster than normal traffic.
- QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Valet Parking.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 167 - CAPACITY INCREASE OR REDUCE TRAFFIC CONGESTION.

"You Can't Pave your way out of Congestion."

Building more lanes to cure congestion is like loosening your belt to cure obesity.

1) There is now overwhelming evidence, including a nationwide study of 70 metropolitan areas over 15 years (Texas Transportation Institute), another California specific study (Hansen 1995) which included Monterey County, that when an area is congested - additional lanes do not provide congestion relief.

2) It is also well documented that additional lanes increase traffic.

3) Further experience shows that "When road capacity shrinks - So Can Traffic" (e.g. San Francisco's Central Freeway in 1996, New York's West Side Highway 1988) - Auto Free Times Winter 1996-97.

Thus the proposed project seems contrary to the stated project goal to relieve congestion.

According to Monterey County Director of Public Works, Lew Bauman, the County will have to spend \$200 - \$220 million dollars simply to bring County roads up to acceptable standards. This is not capacity increasing nor safety improvements - just repairs. (TAMC minutes Oct 27, 1999)

This reduces the feasibility of any capacity increasing or safety improvement project.

Please explain clearly how this project will deal with these concerns.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Capacity Increase or Reduce Traffic Congestion.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Capacity Increase or Reduce Traffic Congestion.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Capacity Increase or Reduce Traffic Congestion.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Capacity Increase or Reduce Traffic Congestion.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Capacity Increase or Reduce Traffic Congestion.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Capacity Increase or Reduce Traffic Congestion.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 168 - SPEED LIMITING SIGNALS TIMING.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Speed Limiting Signals Timing.

Traffic Signals can be timed to limit speed to legal levels.

-

* 169 - AESTHETIC VALUES.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Aesthetic Values.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

The attraction and appreciation (or repulsion) of sensual phenomena. They include visual beauty of landscapes, fragrances (or odors), birdsongs (or chainsaws), flowing water and music, the texture and resiliency of tree bark or forest floor, or the taste of wild fruit.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Aesthetic Values.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 170 - HUMAN STRESS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Human Stress.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Stress Is Real
Human stress is not merely documented as fact it is legally recognized in law as "Intentional Infliction of Emotional Distress."

Fear of psychological harm makes a crime harsher. See PEOPLE v. NGUYEN (5/4/00 - No. S072471) 9th District Federal Court of Appeals "Penal Code §209(b) is not limited to forced movements of the victim that substantially increase the risk of bodily or physical harm. Risk of psychological harm may also be used to elevate kidnapping to aggravated kidnapping."

Loss of comfort (e.g. housing, silence) or increased adverse stimulation (e.g. noise, light) can cause stress.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Human Stress.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 171 - SILENCE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Silence.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Silence is a very different issue than noise. Noise is unwanted sound, while Silence is a valuable positive resource.

Silence can be mapped as those areas which experience continuous periods where no man-made sounds exceed 35 dBA.

Cicadas and frogs can often be heard for as much as a half mile, but they are not human caused noise.

Silence is extremely rare on the Monterey Peninsula. This proposal would greatly diminish the acreage of silent forest. I have measured the ambient sound level in Jeffers Forest at 14 dbA during fog at about 4:30 am. I can personally testify that is quieter than the softest whisper. The minimum continuous sound in Jeffers Forest is below 30 decibels.

To me personally, the natural undamaged-by-human silent serenity of observing the natural Monterey Pine Forest in Pebble Beach from inside it is an astounding natural resource.

Please disclose the quality and quantity of current silence for each of the affected forest areas and how it would change with each of the proposed actions.

Please provide a map of current maximum daily sound levels and please provide a separate map of current minimum daily sound levels with 10 decibel "topographical" lines for the entire project area and the entire peninsula. Please map "topographical" sound levels lines down to the minimum measured sound level 20 decibels.

Please map the change in maximum and minimum sound levels in the project area during construction.

Please map the change in maximum and minimum sound levels in the project area after the different phases of the project are completed.

Please discuss the change in current sound levels on existing trails in the project area and the difference after the project would be completed.

Please describe the aural conditions now existing in the forest from underneath the canopy, before any construction.

Please detail the aesthetic values that would be lost from the existing trails.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Silence.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 172 - OFFENSIVE ODORS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Offensive Odors.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Non-toxic Odors can cause nausea and loss of appetite.
- An odor detection threshold can be far above or below harmful effects.
Carbon Monoxide is odorless yet deadly. Hydrogen Sulfide can be detected
- at 0.0047 ppb, yet OSHA claims it is not harmful until it reaches a level of 10.0 ppb.
- Ozone's odor threshold starts between 0.02 and 0.05 ppm, irritation of the nose and throat at 0.05 ppm, and dryness of the throat above 0.1 ppm.
- "Nitrogen Dioxide's odor threshold is between 1 and 3 ppm; nose and throat irritation has been associated with 13 ppm. At concentrations of 25 ppm volunteers complained of pulmonary discomfort after five minutes of exposure."
- Sulfur Dioxide's odor threshold is about 0.5 ppm. From "Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 56
- The threshold of significance should be whether an objectionable odor can be perceived beyond the limits of the minimum land area of its origin.
(This is based on threshold A.9 in the "Standard Provisions and Reporting Requirements for Waste Discharge Requirements of the Central Coast Regional Water Quality Control Board, 1984. It is essentially
The threshold of whether the odor could be considered a nuisance.)
- "For all mammals, the acuity of the sense of smell depends primarily upon the size of the 'olfactory mucosa,' a specialized area of mucous membrane located in the nose. In humans the olfactory mucosa normally totals less than a square inch in area. In the average bear, it may be one hundred times that much. Bears have been known to detect the odor of rotting carrion from as far away as ten miles." Bears, Their Life and Behaviour, Ashworth & Wolfe, Crown, 1992
- This indicates that to a bear, an offensive smell will be far less intense than to a human.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Offensive Odors.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 173 - SMELL OF HOT TAR ASPHALT ROOFING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Smell of Hot Tar Asphalt Roofing.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

This smell can be highly repugnant causing many complaints to Air Districts. The smell of Hot Tar asphalt roofing can be detected beyond a mile.

Monterey Herald Headlines "Roofing Tar Trailer Explodes," "Residents Flee Salinas Vehicle Fire" Aug 5 1999
The article goes on to state "A Salinas neighborhood was evacuated as flames engulfed a roofing truck..."
"...responding firefighters quickly upgraded it to a two-alarm fire when they learned that it was a roofing truck laden with hot tar with a propane tank on board."
"Firefighters were pumping three thousand (3000) gallons a minute of water on the blaze to put it out and shield adjacent houses from the high radiant heat of the flames." The truck was owned by Williams Roofing of Castroville.
The stench of the hot tar fire saturated dozens of city blocks.

The threshold of significance should be whether this objectionable odor can be perceived beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Smell of Hot Tar Asphalt Roofing.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 174 - ODOR FROM SEWAGE TREATMENT PLANT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Odor from Sewage Treatment Plant.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The threshold of significance should be whether this objectionable odor
can be perceived beyond the limits of the minimum land area of its
origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of
Odor from Sewage Treatment Plant.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 175 - ODOR FROM SEWAGE PUMPING STATIONS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Odor from Sewage Pumping Stations.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Pacific Grove has several Sewage Pumping Stations which constantly emit
an objectionable odor.

The threshold of significance should be whether this objectionable odor
can be perceived beyond the limits of the minimum land area of its
origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Odor from Sewage Pumping Stations.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 176 - ..

The Document appears to have ignored this potentially significant Impact.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 177 - CREOSOTE SMELL.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Creosote Smell.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Creosote is a known carcinogen on California's Prop 65 list. Creosote also has a powerfully repugnant smell that lasts years and on hot days can be repugnant dozens of meters from the source.

The threshold of significance should be whether this objectionable odor can be perceived beyond the limits of the minimum land area of its origin.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Creosote Smell.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 178 - BIOFILTRATION ODOR REDUCTION.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Biofiltration Odor Reduction.

Biofiltration is widely used in slaughterhouses and cocoa roasting plants to remove odors. It is especially good at removing organic odors and VOCs.

* 179 - NATURAL FOREST FRAGRANCES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Natural Forest Fragrances.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The native Monterey Peninsula pine forests contain mint plants which emit a very pleasing fragrance. The native Monterey pine forests have an attractive fragrance of their own emanating from the pine needles. Sometimes it is enhanced with the scent of natural mint in warm conditions.

I can distinguish the scent of a Monterey pine forest from a Redwood forest and a Monterey Cypress forest.

Also a Monterey pine forest smells different in the winter after a rain compared to its dry scent during a hot summer afternoon.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Natural Forest Fragrances.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 180 - NATURAL FOREST VISUAL BEAUTY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Natural Forest Visual Beauty.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

To me personally, the visual beauty, the natural undamaged-by-human design - serenity of observing from inside the existing Monterey Pine Forest in Pebble Beach is an astounding natural resource.

Please describe the visual conditions now existing in the forest from underneath the canopy, before any construction.

Please describe the 360 degree views through the forest that extend for enormous distances without any sign of humanity.

Please include the "Visual Resources Map" identified in County Policy 51. I suspect that parts of the P/Q/R area would be eligible for designation on the map.

Please define "Public viewing area" as described in Coastal Implementation Plan Section 20.147.070.C3 I suspect that much of the P/Q/R area is ridgeline development.

Given that the photos can not be taken from every angle, to depict before and after thoroughly, please include aerial photographs of each subdivision (before) with computer enhancement to depict the buildout (after).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Natural Forest Visual Beauty.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 181 - NATURAL SEASCAPE VISUAL BEAUTY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Natural Seascape Visual Beauty.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

To me personally, the visual beauty, the natural undamaged-by-human design - serenity of observing the ocean without large ships, Cruise Ships, is an astounding natural resource.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Natural Seascape Visual Beauty.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 182 - SUNLIGHT BLOCKING.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sunlight Blocking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Human created structures can block sunlight from vegetation, reducing photosynthesis, weakening vegetation and algae and allowing competitors and predators to reduce their numbers. Sunlight Blocking can be especially harmful to ecotones (e.g. buildings blocking sunlight from shores of lakes, rivers or intertidal habitat of oceans) as ecotones hold a larger number of, and abundance of, species.

Please measure area in acres shaded, and hours of shade. A useful measure is acre-hours of shaded area.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sunlight Blocking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 183 - PERMANENT HARM TO COMMUNITY VISUAL AESTHETICS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Permanent Harm to Community Visual Aesthetics.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- A more visually attractive community is more satisfying to live in.
It also increases property values.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Permanent Harm to Community Visual Aesthetics.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 184 - THE VISUAL INSULT OF A GOLF COURSE IN A WILD AREA.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
The Visual Insult of a Golf COurse in a Wild Area.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
The Visual Insult of a Golf COurse in a Wild Area.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 185 - LIGHT POLLUTION OR LIGHT TRESPASS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Light Pollution or Light Trespass.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Light pollution is unwanted light, both direct and indirect.

When an artificial light shines directly onto another property, including public access areas, it has an adverse impact called light pollution or Light Trespass. Indirect light can also have an adverse impact - especially if surfaces reflecting it are shiny or mirrored.

LIGHTING FAILS TO DETER CRIME

"Lighting has received considerable attention. Yet, evaluation designs are weak and the results are mixed. We can have very little confidence that improved lighting prevents crime, particularly since we do not know if offenders use lighting to their advantage. In the absence of better theories about when and where lighting can be effective, and rigorous evaluations of plausible light interventions, we cannot make any scientific assertions regarding the effectiveness of lighting."
-National Institute of Justice, 1997, report to Congress, Chapter 7.

Example: The intense green lights used by squid and sardine fishing boats in the late 1990's caused light pollution for every house in New Monterey and Pacific Grove with a view of Monterey Bay.

Example: For ten years until the condominiums were built, the Spanish Bay parking lot lit up the entire Asilomar Beach, and glared all night long, along the entire western seafront of Pacific Grove. The light shined in the windows of homes and cars. It directly shined in the eyes of beachwalkers. The glare could be seen distinctly for at least 20

miles out to sea. That specific glare can be seen distinctly from the air, flying over Santa Cruz, Carmel Valley and Big Sur.

The County of Monterey has several intense and unnecessary light pollution sources including --

* the Dole warehouse just south of the Salinas River just east of Highway 1, which can be seen from the Monterey Peninsula and from Moss Landing,

* the Point Sur Lighthouse beacon which intrudes on the wilderness and does not need to shine on shore. The Pigeon Point Lighthouse is an example of a lighthouse which does not shine onshore.

* Soledad Prison which is in the city of Soledad, but the County can request their help in alleviating this problem.

The City of Monterey has several significant light pollution sources including --

* Two baseball parks, one at lake El Estero and the other off Franklin street closer to downtown. The blazing lights from these lights can be seen, and cast shadows, for miles.

* The Presidio of Monterey also has blinding uncontrolled light from its sports field near Pacific Grove's Presidio road and Highway 68 which can be seen miles away on the shore roadways of Pebble Beach.

All of these light sources can provide 100 percent of their intended illumination when using shielding which prevents offsite light pollution.

Please measure and detail the visual pollution from direct light sources at night and its impact on neighbors and wildlife.

Please measure and detail the visual pollution from indirect light sources at night and its impact on neighbors and wildlife.

Thresholds of significance include whether the light is bright enough to create shadows on another property or could be considered a nuisance.

Please use these criteria to measure this impact: mapped area of impact, duration of impacts.

Labware Direct (1 800 356 0783) sells light meters measuring as low as 0.1 to 5,000 foot candles and 0.1 to 50,000 Lux.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Light Pollution or Light Trespass.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,

credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the

baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 186 - NIGHT SKY GLARE INCREASE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Night Sky Glare Increase.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Have you looked up at night lately? The universe is going away, gone already for many. The universe is an important part of the environment, to astronomy and to the general public. For most people on earth, the dark skies our ancestors had have disappeared. The problem is urban sky glow, due mostly to too much bad lighting."

"With good lighting, we all win. We help preserve the dark skies, we see better (and are safer and more secure), we have a more pleasant and comfortable nighttime environment, and we save a great deal of energy and money doing so. Neither astronomers nor the public, anywhere, need any of the adverse environmental effects of poor lighting."
- The International Dark Sky Association (IDA)

Glare from light at night can be an enormous nuisance.
"Glare never helps visibility, but it is far too common in all of our cities. We should strive for a glare free environment."

"A trashy looking, confusing nighttime environment. We should, all of us, be striving for a good looking nighttime environment, just as we should be doing in the daytime. Such poor environments are part of the stress of today's life. We should help with the problem, not compound it. Remember, the night is part of the environment too." - IDA

National Parks experience light pollution from city lights more than 100 miles away. Artificial light pollutes nearly two-thirds of the U.S.'s national parks that allow overnight stays. - National Parks and Conservation Association (www.npca.org)

At least 30 percent of the energy powering outdoor lighting in the U.S. is wasted. The U.S. could save \$1.5 billion per year if that waste was eliminated.

Under ideal conditions you can expect to see as many as 15,000 stars with your naked eye in the night sky in the U.S. In a typical U.S. suburb only 200 to 300 will be visible. In a major metropolitan area, you're lucky to see two dozen stars on a clear night. - IDA

Please use the number of visible stars as a measure of light glare.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Night Sky Glare Increase.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 187 - WINDOW AND SKYLIGHT ONE-WAY FILM.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Window and Skylight One-Way Film.

Windows and Skylights can have one-way "mirror" film applied on the inside to greatly reduce light leakage to the outside, perhaps as much as 95% reduction.

* 188 - VEHICLE LIGHT AND GLARE INCREASE ON SURROUNDING RESIDENCES.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Vehicle Light and Glare Increase on Surrounding Residences.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

When vehicle lights directly shine onto another property - it has an adverse impact called Light Trespass. Indirect light can also have an adverse impact.

Thresholds of significance include whether the light is bright enough to create shadows on another property or could be considered a nuisance.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Vehicle Light and Glare Increase on Surrounding Residences.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 189 - LIGHT AND GLARE INCREASE ON WILDLIFE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Light and Glare Increase on Wildlife.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Wildlife habits can be dramatically changed by lights.
Consider the
flights of a moth near a single outdoor bulb.

BIRDS:
Sidney Gauthreaux of Clemson University discovered that
"bright lights
shining from tall buildings or reflecting off low clouds can confuse
migratory birds on their way to breeding grounds." cited in
Backpacker
magazine, Aug 1999, p 31

"The British Trust for Ornithology estimates that at any given
hour on
any given night, 10,000 English Robins are serenading a
false dawn."
Ibid

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
Light and Glare Increase on Wildlife.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows
whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is
measured or assumed.

25. Please state whether this total PERCENT maximum
change is an AVERAGE amount, a worst case expected or a
best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to
which the impact would raise or lower the baseline number
and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is
measured or assumed.

28. Please state whether this total maximum change amount
is an AVERAGE amount, a worst case expected or a best
case expected.

29. Please list all potential CUMULATIVE impacts related to
this one.

30. Please describe all potential CUMULATIVE impacts
related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 190 - SKY AND STAR VISIBILITY LOSS FROM NIGHT SKY GLARE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Sky and Star Visibility Loss from Night Sky Glare.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Urban sky glow (the brightening skies over our heads) is destroying our view of the universe. We don't live up there in the sky; we don't need all that light up there." - The International Dark Sky Association
("is a membership based organization with members now in 56 countries

which has produced many Information Sheets discussing the issues, as well as slide sets and other material available for those who want to become informed.")

When a light directly shines into the sky it has an adverse impact.
Indirect light can also have an adverse impact - especially if the upward surfaces reflecting are shiny or mirrored (e.g. glass or water).

Spanish Bay Hotel has long lines of windows which at night greatly detract from the formerly dark beach where star viewing was possible.

Fog spreads light out upward. Even when no electric light is directed towards the night sky - fog can spread the light from a community into the sky above it

Please these criteria to measure this impact: number of applications, mapped area of impact, duration of impacts.

Under ideal conditions you can expect to see as many as 15,000 stars with your naked eye in the night sky in the U.S. In a typical U.S. suburb only 200 to 300 will be visible. In a major metropolitan area, you're luck to see two dozen stars on a clear night. - IDA

Please use the number of visible stars as a measure of light glare.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Sky and Star Visibility Loss from Night Sky Glare.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 191 - LIGHT SHADES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Light Shades.

Require that all lighting, interior as well as exterior, be restricted with opaque shades so that only the smallest necessary exterior areas are directly illuminated. Offsite direct lighting must be prohibited as well as indirect lighting which casts a shadow.

* 192 - SHINE LIGHT DOWN AND ONLY WHERE NEEDED.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Shine Light Down and Only Where Needed.

Control the light output to locations where it is needed; don't waste it. Use quality lighting fixtures.

"It All Works. Such quality lighting design has been used for some time now in many locations. Such cities are benefiting by better lighting for their citizens, by a great deal of energy savings, and by darker skies (but not darker streets). We all really do win."
- The International Dark Sky Association ("is a membership based organization with members now in 56 countries which has produced many Information Sheets discussing the issues, as well as slide sets and other material available for those who want to become informed."
For more info "<http://www.darksky.org/ida/key/intro.html>"

* 193 - MOTION DETECTION ACTIVATED LIGHTING.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Motion Detection Activated Lighting.

Use of Motion-Detection-Activated-Lighting provides light only when needed. This could reduce unneeded lighting by up to 95 percent.

* 194 - USE LIGHTING TIME CONTROLS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Use Lighting Time Controls.

Use time controls (or dimmers or other controls) to insure that light is only on when needed, and not on when it is not needed.

* 195 - DEED RESTRICTION PROHIBITING SKYWARD AND OFFSITE DIRECT LIGHTING.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Deed Restriction Prohibiting Skyward and Offsite Direct Lighting.

Prohibit All Direct Lighting of the Sky and neighboring properties with a Recorded Deed Restriction.

* 196 - WINDOW DARKENING FILM AND OPAQUE CURTAINS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Window Darkening Film and Opaque Curtains.

Require that all windows be covered with a Window Darkening Film and Opaque Curtains which dramatically reduces the amount of light so that only the smallest amount of light leaks outside buildings.

Spanish Bay Hotel has long lines of windows which at night greatly detract from the formerly dark beach where star viewing was possible. It is an unignorable distraction.

* 197 - MINIMIZE GLARE.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Minimize Glare.

Design and install lighting to insure that glare is minimized. Most all glare comes from poor fixtures or poor installations. There is no need for any of it.

* 198 - PROHIBIT EXCESSIVE LIGHTING.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Prohibit Excessive Lighting.

Use the right amount of light for the task, not overkill. "More light"

is not the approach to use. When not blinded by glare, the eye is a marvelous instrument and can see very well at what seems to be quite low lighting levels. In addition, going from over lit areas to darker areas means that we don't see too well (transient adaptation), and the opposite holds as well.

"It All Works. Such quality lighting design has been used for some time now in many locations. Such cities are benefiting by better lighting for their citizens, by a great deal of energy savings, and by darker skies (but not darker streets). We all really do win."
For more info "<http://www.darksky.org/ida/key/intro.html>"

* 199 - SKY GLARE REDUCTION FROM TREES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Sky Glare Reduction from Trees.

Trees filtering sunlight does more than just cooling with shade, they reduce the glare of bright skies. This makes it easier on the eyes to look up and enjoy the scenery - especially in urban areas with little vegetation.

* 200 - VISUAL AESTHETIC LOSS FROM SLAB BRIDGE RAILINGS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Visual Aesthetic loss from Slab Bridge Railings.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Replacing See-Through Bridge Railings with concrete slab rails loses the few peeks a passenger has of the countryside.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Visual Aesthetic loss from Slab Bridge Railings.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 201 - LOSS OF THE THRILL OF SEEING A WILD ANIMAL IN ITS NATURAL HABITAT.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Loss of the Thrill of Seeing a Wild Animal in its Natural Habitat.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Loss of the Thrill of Seeing a Wild Animal in its Natural Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 202 - PLANTING TREES FOR AESTHETIC VISUAL BEAUTY.**

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully
why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Planting Trees for Aesthetic Visual Beauty.

*** 203 - LOSS OF COOLING SHADE FROM TREES.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Loss of Cooling Shade from Trees.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Trees cool large amounts of surface level air and land (especially black asphalt) by providing shade and by evaporation. In sunny areas workers often prefer tree shaded parking spaces.

Please these criteria to measure this impact: temperature, volume of air cooled, mapped area of impact, duration of impacts.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Loss of Cooling Shade from Trees.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal

laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 204 - PLANTING TREES FOR OUTDOOR COOLING SHADE.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Planting Trees for Outdoor Cooling Shade.

Trees cool large amounts of surface level air and land (especially black asphalt) by providing shade and by evaporation. In sunny areas workers often prefer tree shaded parking spaces.

-

* 205 - INTELLECTUAL INSULT OF MAN-MADE DEVELOPMENT.

The Document appears to have ignored this potentially significant Impact. Please carefully analyze and disclose the potential impacts of Intellectual Insult of Man-made Development.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The Intellectual Insult of non-natural man-made development or extraction activities in a Wild Area is real. Some people value wilderness and other phenomena as priceless.

How much money must I offer so you will sell your child or your mother? Consider the outrage if someone offered money to avoid democracy, justice or religion.

"Large aspects of human values are strictly emotional. They can scarcely be measured in material terms, nor can a monetary value be assigned to them. Even money, itself, often acquires an emotional value that may not be very closely related to its intrinsic value."

"Such value judgments may not be lightly dismissed as is shown by the fact that most of the values for which men will face death - such as love, patriotism, or honor - or for which they will face economic loss - such as friendship, dignity, sentiment, or, above all, beauty - cannot be measured in money." Encyclopedia of Biological Sciences, P. Gray, McGraw-Hill 1961, p 271

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Intellectual Insult of Man-made Development.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 206 - AIR POLLUTION GENERAL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution General.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Sins of Emission

"U.S. Industries pump at least 2.4 Billion pounds of chemicals into the air every year." Audubon 1994 Environmental Almanac citing US-EPA

Air Pollution has been measured traveling at least 7,000 miles from Manchuria, China to Crater Lake, Oregon and caused significant degradation of air quality at that distance. Science News, Dec 12, 1998

School Absenteeism Rises When Air Pollution Rises
-Effects of ambient air pollution on School Absenteeism Due to Respiratory Illnesses, Report sponsored in part by US-APE & CARB.
www.epidemiology.com

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution General.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 207 - INDOOR AIR POLLUTION.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Indoor Air Pollution.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Indoor Air Pollution includes lead, radon, secondhand tobacco smoke, cleaning chemicals (e.g. ammonia and chlorine), pesticides, ozone from photocopiers and laser printers, photography chemicals, hobby chemicals, insulation outgassing, building material outgassing; furniture, drapes and rug outgassing; heating appliances (exhaust from space heating, water heating and cooking appliances. Wood stoves, kerosene heaters, coal heaters and natural gas water and space heaters are of special concern).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Indoor Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 208 - VAPOR INTRUSION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Vapor Intrusion.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Vapor Intrusion occurs when volatile compounds, typically liquids such as TCE (trichloroethylene and chlorinated hydrocarbons, ascend through soil and building foundations and create indoor air pollution.

In Denver, chlorinated organic solvents from dry-cleaning and degreasing operations are cancer causing and a common example of this problem.
Scientific American July 2002

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Vapor Intrusion.

1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 209 - VEHICLE AIR POLLUTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Vehicle Air Pollution.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Vehicle Air Pollution.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 210 - AIR POLLUTION-NITROGEN OXIDES (NOX) BY CONCENTRATION.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the potential impacts of Air Pollution-Nitrogen Oxides (NOx) by Concentration.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The concentration of an air pollutant is independent of its weight and more important to safe breathing. No one has ever drowned by being surrounded by a cloud (which can have a mass of millions of pounds), but people often drown in just a few inches or ounces of water (concentrated cloud).

"It has been shown that prolonged exposure to NOx, greater than 0.5 ppm appears to be particularly hazardous for person with asthma, chronic respiratory diseases, and cardiac disease. People living in the Los Angeles area are often exposed for long periods of time to NOx concentrations above what is considered safe." Dictionary of Scientific Literacy, Brennan, 1992, Wiley.

A report done in 1990 for the US-EPA by Tom Addison found:
"Analyzing the effects of only one pollutant often was justified by the inaccurate conclusion that CO serves as an 'indication of the full range of pollutants'. The effects of a project on the full range of

pollutants, however, can NOT be estimated by CO emissions. In general, increasing the average travel speed on a freeway from a congested, stop-and-go condition to a steady flow decreases the emissions of both CO and total HC (hydrocarbons), but INCREASES the emissions of NO (oxides of nitrogen). Furthermore, the impacts of CO are localized, but the formation of ozone from HC and NO affects the larger air basin".

"Nitrogen Dioxide's odor threshold is between 1 and 3 ppm; nose and throat irritation has been associated with 13 ppm. At concentrations of 25 ppm volunteers complained of pulmonary discomfort after five minutes of exposure."

What are the significance levels used for breathing concentrations versus time for NOx (as distinguished from weight)?

Labware Direct (1 800 356 0783) sells Nitrogen Dioxide detection system measuring concentrations as as low as 0.5 ppm.

Davis Instruments sells a Nitrogen Dioxide monitor for \$517 which measures down to 0.1 ppm. (800 269 0299)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Nitrogen Oxides (NOx) by Concentration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 211 - AIR POLLUTION-NITROGEN OXIDES (NOX) BY WEIGHT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Nitrogen Oxides (NOx) by Weight.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The San Luis Obispo Air Pollution Control District states that any activity creating 10 lbs of Nitrogen Oxides (NOx) or more per day is a potentially significant impact; and any activity creating more than 137 lbs / day of NOx requires an EIR in all cases.

MBAPCD Significance Level for Nitrogen Oxides (NOx) is the same at 137 lbs / day.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Nitrogen Oxides (NOx) by Weight.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 212 - AIR POLLUTION-SULFUR DIOXIDE (SO₂) BY CONCENTRATION.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Sulfur Dioxide (SO₂) by Concentration.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The concentration of an air pollutant is independent of its weight and more important to safe breathing.
No one has ever drowned by being surrounded by a cloud (which can have a mass of millions of pounds), but people often drown in just a few inches or ounces of water (concentrated cloud).

Increased mortality from bronchitis and lung cancer has been observed with an annual mean Sulfur dioxide concentration of 0.04 part per million. (Environmental Protection, Emil Chanlett 1979)
The London Smog of Dec 1952 killed some 4000 people at a measured SO₂ concentration of 1.34 ppm. "Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 45

Many air pollution disasters have involved SO₂: London 1952 (4000 human deaths); London 1956 (1000 dead); London 1957 (700-800 dead); London 1962 (700 dead); London 1880 (1000 dead); New York 1953 (250 dead); New York 1963 (200-400 dead); Meuse Valley Belgium 1930 (63 dead); Donora Pennsylvania 1948 (20 dead).

"In contact with water it is converted into sulfurous acid (H₂SO₃) and ultimately sulfuric acid (H₂SO₄). This acid corrodes machinery and metal components and damages stone buildings (and marble statues), the Acropolis being a good example. Even more seriously it engenders respiratory and lung diseases in millions of people. For many years people refused to accept that this problem extended beyond industrial centers themselves. But acids can be carried great distances on the wind, ... from USA to Canada, before falling as acid rain. Forest growth is disrupted and the debilitated trees become prone to disease and parasitic attack. Today the forests of central Europe

are beginning to die as the alkaline reserves in the bedrock become exhausted. In lakes and waterways all life ceases when the pH value falls below about 4. Many lakes in Scandinavia are already devoid of all organic life." Earth Book Atlas 1987, pg 24 ISBN 0-87746-100-7

"Sulfur dioxide in the air at concentrations of 1 part per million can kill the cells in leaves." Yearbook of Agriculture 1957

The states of Virginia and Maryland set maximum concentration levels for one (1) hour at 0.1 ppm for Sulfur oxides.

The state of Hawaii set maximum concentration levels for annual exposure to Sulfur oxides at 0.007 ppm.

What are the significance levels used for breathing concentrations versus time for SO₂?

Labware Direct (1 800 356 0783) sells Sulfur Dioxide detection system measuring concentrations as as low as 0.05 ppm.

Davis Instruments sells a Sulphur Dioxide monitor for \$517 which measures down to 0.1 ppm. (800 269 0299)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Sulfur Dioxide (SO₂) by Concentration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 213 - AIR POLLUTION-SULFUR DIOXIDE (SO₂) BY WEIGHT.

The Document appears to have ignored this potentially significant Impact.

The San Luis Obispo Air Pollution Control District states that any activity creating 10 lbs of Sulfur Dioxide or more per day is a potentially significant impact; and any activity creating more than 137 lbs / day of SO₂ requires an EIR in all cases.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Sulfur Dioxide (SO₂) by Weight.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 214 - AIR POLLUTION-SULFUR DIOXIDE (SO₂) COMBINED WITH PARTICULATES.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of

Air Pollution-Sulfur Dioxide (SO₂) Combined with Particulates.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Combinations of two or more gas-aerosol mixtures in moist and cold weather can caused synergistic (highly enhanced) damage to health."

This refers to a discussion of air pollution disasters including the loss of 400 lives in London in Dec 1952.

"Animal test suggest that when particulate matter and SO₂ concentrations, normally considered to be harmless, existed together as a gas-aerosol combinations, they produced purple hemorrhage and paralysis of respiratory tracts. If, additionally, these gas-aerosol mixtures occurred in a super cool state such as was the case in the 1952 [London] fog, they showed on reaching the lungs, a higher toxicity than hydrocyanic acid(HCN)." "Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 50

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Sulfur Dioxide (SO₂) Combined with Particulates.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 215 - AIR POLLUTION-SULFATE (SO4).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Sulfate (SO4).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

In the Northeast US SO4 comprises about 60% of the pm 2.5.
PM 2.5 typically remains in the air for 5 days.
In the West, there is more dust and sulfate is less (but still) important.

There is a CAA standard for SO2 but not SO4 (sulfate).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Sulfate (SO4).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 216 - ACID PRECIPITATION "ACID RAIN".

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Acid Precipitation "Acid Rain".

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

ANY INCREASE FROM FULL USE IS A SIGNIFICANT ENVIRONMENTAL IMPACT

When a resource is fully used, or at capacity, any increase in demand is a potentially significant environmental impact under California's Environmental Quality Act (CEQA). It is also a potentially significant cumulative environmental impact.

"Once the 'cumulative loading' of acids deposited in these areas through the years has exhausted the environment's limited neutralizing capacity, severe effects follow very quickly with the addition of small, previously inconsequential quantities of acid." G. Whetstone, Environmental Law Reporter, 10, 1982

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Acid Precipitation "Acid Rain".

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 217 - ACID RAIN HARMING FORESTS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Acid Rain Harming Forests.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Acid rain includes all forms of precipitation - rain, snow and fog.
It is caused in large part by coal-fired electric plants.

"Highly acidic rain, pH 3.0 and lower, does damage some crops. Acid rain also damages trees." -Dictionary of Scientific Literacy, Wiley, 1992

"Rainwater is normally slightly acidic... however Adinondack lakes were at least one hundred times more acidic than expected." Adinondack Mountains are downwind of some major coal-fired power plants.
Environmental Science, M,M & W p 9

"Death rates in trees in midwestern US forests showed a dramatic rise during the 1980s. This and similar problems in European forests, appears to be due to interactions of air pollution effects (acid rain and excess deposition of nitrogen are altering soil chemistry and water quality, and high ozone concentrations at ground level are damaging foliage) with natural stresses, such as insect attacks, diseases, and drought." Betrayal of SR, p 151

Leaching of the critical nutrient calcium from forest soils in the eastern US is occurring at an unsustainable rate. Long-Term Depletion of Calcium and other nutrients in Eastern US Forests, Environmental Management, Federer, et al 13:593-601

That loss, which appears to be caused by a combination of short-rotation harvesting of the forests and acid precipitation, could result in a roughly 50 percent drop in both calcium and forest biomass in about 120 years. "The effects of leaching and whole-tree harvesting on cation budgets of several forests", Johnsen et al, Journal of Environmental Quality 17: 418-424

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Acid Rain Harming Forests.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 218 - LIMING LAKES.

Adding lime to lakes is sometimes suggested as a way to reduce the impacts of acid rain.

"Let us dismiss out of hand that we can lime the northeast quadrant of a continent... If you take an acid lake and lime it, you do not now have anormal lake; you now have a limed, formerly very acid lake, with a very peculiar water chemistry and a very peculiar biota as a result." Harold Harvery, on the use of lime to counteract the effects of acid rain, Adirondack Life, Sept-Oct 1982

"I would suggest it is a good way to manage a fish hatchery but a lousy way to manage an environment." Hans Martin, Director Air Resources Branch, Environment Canada, on the use of lime in lakes to counteract acid rain, speech, SOil Conservtion Society of America conference, Burlington, Vt., 25 Oct, 1982

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Liming Lakes.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Liming Lakes.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Liming Lakes.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Liming Lakes.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:

Liming Lakes.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Liming Lakes.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines

listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 219 - SCRUBBERS FOR VEHICLE SO2 EMISSIONS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Scrubbers for Vehicle SO2 Emissions.

Scrubbers use a slurry of water and ground limestone to combine with the sulfur.

"Up to 90 percent of sulfur dioxide in flue gases can be removed with this technology."
There is no reason to expect this could not provide significant reductions in vehicle emissions.

* 220 - AIR POLLUTION-CARBON MONOXIDE (CO) BY CONCENTRATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Carbon Monoxide (CO) by Concentration.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The concentration of an air pollutant is independent of its weight and more important to safe breathing.

No one has ever drowned by being surrounded by a cloud (which can have a mass of millions of pounds), but people often drown in just a few inches or ounces of water (concentrated cloud).

Carbon Monoxide from auto exhausts is a popular method of suicide.

"The usual levels of 30 ppm CO found in city air bind about 5 percent of the hemoglobin, which in terms of oxygen supply of the blood is comparable to living at an altitude of 6,000 feet."
"Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 56

Adverse Human Health Guidelines
"12-17 mg/cubic meter for 8 hours produces a concentration of 2-2.5% carboxyhemoglobin. 35 mg/cubic meter for 8 hours produces a concentration of 5% carboxyhemoglobin." Id.

There is no lower limit to measuring CO concentrations.

What are the significance levels used for breathing concentrations versus time for CO?

Labware Direct (800 356 0783) sells Carbon Monoxide detection system measuring concentrations as as low as 5 ppm.

Davis Instruments sells several CO monitors from \$265 to \$299 which measure down to 0.0 ppm. (800 269 0299)

KiddeSafety sells a continuous readout CO detector for \$40.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Carbon Monoxide (CO) by Concentration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 221 - AIR POLLUTION-CARBON MONOXIDE (CO) BY WEIGHT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Carbon Monoxide (CO) by Weight.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Carbon Monoxide from auto exhausts is a popular choice for suicide as it is so lethal.

"Of the world's total CO production of 232 million tons, 80 percent is produced by automobiles." "Atmospheric Pollution", Wilfrid Bach,

McGraw-Hill 1972 p 56

"The usual levels of 30 ppm CO found in city air bind about 5 percent of the hemoglobin, which in terms of oxygen supply of the blood is comparable to living at an altitude of 6,000 feet." Ibid, p 56

"CO is a very stable gas. In an experiment a CO-O mixture under exposure to sunlight remained unchanged even after seven years." Ibid, p 10

There is no lower limit to detecting CO concentrations when using nondispersive infrared spectrometry. Ibid p 138

The San Luis Obispo Air Pollution Control District states that any activity creating more than 50 lbs / day of Carbon Monoxide is a potentially significant impact; and any activity creating more than 550 lbs / day of Carbon Monoxide requires an EIR in all cases.

The MBAPCD Significance Level for Carbon Monoxide (CO) is 550 lbs / day.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Carbon Monoxide (CO) by Weight.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 222 - AIR POLLUTION-CARBON DIOXIDE (CO2).

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Carbon Dioxide (CO2).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"CO2, released into the air remains there for at least several centuries." "Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972
citing C.D. Keeling, "The Concentration and Isotopic Abundances of CO2
in the Atmosphere," Tellus 12, 200-203, 1960

What thresholds do you use as significant in both weight and concentration?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Carbon Dioxide (CO2).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 223 - AIR POLLUTION-HYDROCARBONS (HC).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Hydrocarbons (HC).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Common sources of HC air pollution are Vehicles, Burning and decomposition. Vehicle HC air pollution turns into SMOG. Oil from paving releases continuous long term HC air pollution. (See also Asphalt-Water Pollution)

A concentration of HC at 100 micrograms / cubic meter can produce injury. Email Chanlett, Environmental Protection, 1979, citing NAAQS 1971

A concentration of HC of 160 micrograms / cubic meter is the maximum level that may occur 6-9 am once each year. Id.

Labware Direct (1 800 356 0783) sells Diesel exhaust detection system measuring concentrations of "High Class" hydrocarbons as low as 100 ppm; "Low Class" hydrocarbons as low as 0.05%; and petroleum distillates as low as 0.5 mg/Liter.

Davis Instruments sells a combustible gas detector for ammonia, methane, natural gas, propane, butane, isobutane, cyclopentane, ethane, ethanol, CO monitors for \$230 which measures down to 5 ppm. (800 269 0299)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Hydrocarbons (HC).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 224 - AIR POLLUTION-REACTIVE ORGANIC GASES (ROGS OR VOCs) BY CONCENTRATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Reactive Organic Gases (ROGs or VOCs) by Concentration.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The concentration of an air pollutant is independent of its weight and more important to safe breathing.
No one has ever drowned by being surrounded by a cloud (which can have a mass of millions of pounds), but people often drown in just a few inches or ounces of water (concentrated cloud).

Reactive Organic Gases (ROGs) include: unsaturated olefins and compounds belonging to the aromatic or benzene group.

"The aromatics have been found to be carcinogenic or cancer-producing."
"Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 10

Pesticides used in California fields can cause smog in agricultural regions of the state, according to a report released recently by the Environmental Working Group and Californians for Pesticide Reform. After application, pesticides give off large quantities of reactive organic gases (ROGs), also known as volatile organic compounds (VOCs), which contribute to formation of smog and which can also cause cancer, birth defects, nerve damage and kidney and heart disease. Approximately 98.9 million pounds of ROGs are emitted from pesticides each year in California -- nearly four times the total ROG emissions from petroleum refining, and more than double the ROG emissions from all other industrial sources.

ROGs (or VOCs) are often measured in units of pounds per square inch Reid Vapor pressure.

Gasoline containing ethanol is limited to 0.2 psi (Reid).

What are the significance levels used for breathing concentrations versus time for ROGs?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Reactive Organic Gases (ROGs or VOCs) by Concentration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 225 - AIR POLLUTION-REACTIVE ORGANIC GASES (ROGS OR VOCs) BY WEIGHT.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Air Pollution-Reactive Organic Gases (ROGs or VOCs) by Weight.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Pesticides used in California fields can cause smog in agricultural regions of the state, according to a report released recently by the Environmental Working Group and Californians for Pesticide Reform. After application, pesticides give off large quantities of reactive organic gases (ROGs), also known as volatile organic compounds) which contribute to formation of smog and which can also cause cancer, birth defects, nerve damage and kidney and heart disease. Approximately 98.9 million pounds of ROGs are emitted from pesticides each year in California -- nearly four times the total ROG emissions from petroleum refining, and more than double the ROG emissions from all other industrial sources.

The San Luis Obispo Air Pollution Control District states that any activity creating 10 lbs of Reactive Organic Gases (ROGs) or more per day is a potentially significant impact; and any activity creating more than 137 lbs / day of ROGs requires an EIR in all cases.

ROGs (or VOCs) are often measured in units of pounds per square inch Reid Vapor pressure.

The MBAPCD CEQA Significance Level for Reactive Organic Gases (ROGs) is 137 lbs / day.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Reactive Organic Gases (ROGs or VOCs) by Weight.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 226 - AIR POLLUTION-RADON-222.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Radon-222.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Radon is the decay product of Radium 226. Radon-222 is the decay product of uranium 238. Radon decays into radioactive elements which emit alpha particles, which in a respiratory system can lead to lung cancer.

Radon-222 quickly decays into solid particles that when inhaled expose lung tissue to a large amount of ionizing radiation.

Ionizing radiation damages biological damage because it has enough energy to knock an electron out of its orbit. A powerful blast of radiation can cause cancer by damaging a cell's repair mechanism.

The EPA's indoor radon survey suggests that annual radon levels above 4 picocuries (4 trillion's of a curie) is unsafe. Canada, Sweden and Norway have set 20 picocuries as the maximum safe level. Living in The Environment by G. Tyler Miller pg 477, Wadsworth Publishing 1998

A California state report released April 22 1999 concluded about five (5) percent of California's elementary schools have significant concentrations of cancer-causing radon. It sampled 378 of the state's 5400 elementary schools.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Radon-222.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 227 - AIR POLLUTION-FORMALDEHYDE.

The Document appears to have ignored this potentially significant impact. Please carefully analyze and disclose the potential impacts of Air Pollution-Formaldehyde.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Formaldehyde is a respiratory irritant and a known carcinogen on the California Proposition 65 list.

CARB's recommended exposure limit is 0.5 parts per million.

Battelle Memorial Institute in Columbus Ohio, measured 24-hour Formaldehyde emissions from 55 domestic consumer and construction products. Many consumer product release copious amounts including

Latex paints, insulating foams, acid-cured floor finishes (up to 1.2 grams per square meter per hour), particleboard, and pre-pasted wall-paper (nearly 700 micrograms per square meter per hour). Science News Jan 9 1999, pg 22

Labware Direct (1 800 356 0783) sells Formaldehyde detection systems measuring concentrations as low as 1 ppm.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Formaldehyde.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 228 - AIR POLLUTION-LEAD (PB).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Lead (Pb).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

According to the Agency for Toxic Substances and Disease Registry neurological studies do not indicate any safe level of lead exposure.

Lead is a known carcinogen on the California Proposition 65 list.

Lead is a known reproductive toxic on the California Proposition 65 list.

Lead is a known male reproductive toxic on the California Proposition 65 list.

Lead Air Pollution has been measured traveling at least 7,000 miles from Manchuria, China to Crater Lake, Oregon exceeding 10 times its typical values. Science News, Dec 12, 1998

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Lead (Pb).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable,

credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the

baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 229 - AIR POLLUTION-ARSENIC.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Arsenic.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Arsenic Air Pollution has been measured traveling at least 7,000 miles from Manchuria, China to Crater Lake, Oregon exceeding 10 times its typical values. Science News, Dec 12, 1998

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Arsenic.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 230 - AIR POLLUTION-MERCURY (HG).

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Mercury (Hg).

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Mercury is known to the state of California as causing reproductive toxicity on the California Proposition 65 list.

US-EPA reported some 341 tons of mercury are spewed into the air annually, mostly by power plants and incinerators. Science News Vol 145: 119
"Even lightbulbs, paint and dental fillings contribute substantially."

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Mercury (Hg).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 231 - AIR POLLUTION-CADMIUM (CD).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Air Pollution-Cadmium (Cd).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Human activity has ... multiplied the natural flow of cadmium into the atmosphere eightfold..." Beytrayal or Science and Reason, Erlich, 1996

Cadmium is a known carcinogen on the California Proposition 65 list.
Cadmium is a known reproductive toxic on the California Proposition 65 list.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Cadmium (Cd).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 232 - AIR POLLUTION-CHROMIUM.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of

Air Pollution-Chromium.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Chromium is a known carcinogen that causes tumors of lungs and nasal passages when inhaled.

"Chromium, in its 'hexavalent' state, is one of the most potent substances proven to cause cancer in humans." -L.A.'s Lethal Air, Eric Mann, 1991

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Chromium.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 233 - AIR POLLUTION-BERYLLIUM.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Beryllium.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Beryllium disease is an incurable lung illness.

Beryllium is a metal critical to the US Military. It is used in missiles
jet planes and weapons.
A federal safety limit exists.

Nearly 150 Dept of Energy and contractor employees exposed to radioactive substances have been diagnosed with Chronic Beryllium Disease.

DOE estimates between 250 and 700 DOE contractors will develop radiation induced cancers over the next 30 years, of which 60 percent may die.
(US-DOE Office of Env Health & Safety, 1999)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Beryllium.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 234 - AIR POLLUTION-COPPER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Copper.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Copper Air Pollution has been measured traveling at least 7,000 miles

from Manchuria, China to Crater Lake, Oregon exceeding 10 times its typical values. Science News, Dec 12, 1998

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Copper.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 235 - AIR POLLUTION-OZONE FROM VEHICLES (O3) CONCENTRATIONS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Ozone from Vehicles (O3) Concentrations.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Ozone induces nausea, headaches and lung infections at 0.5 parts per million. Ozone is lethal at 50 ppm after 30 minutes. The current U.S. Ozone limit is 0.08 ppm averaged over eight hours and 0.12 ppm for one hour. At 0.07 ppm of ozone "even robust individuals may suffer temporary, subtle damage - leaky lungs." Science News May 13, 2000

This means that lung damage can occur when ozone levels are below U.S. legal limits.

"Each year, smog prematurely kills more than 1,600 people in the South Coast basin (Los Angeles), according to air quality officials" -L.A.'s Lethal Air, Eric Mann, 1991

The Pinnacles monitoring station in Monterey County recorded numerous violations of the state ozone standard from 1992-1997.

According to Ellis B. Cowlings of North Carolina State University US crop yields are reduced by \$5 billion to \$10 billion annually by ozone pollution. Science News March 27, 1999

Labware Direct (1 800 356 0783) sells Ozone detection system measuring concentrations as low as 0.025 ppm.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Ozone from Vehicles (O3) Concentrations.

- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 237 - AIR POLLUTION-OZONE ON AGRICULTURAL PRODUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-OZONE on Agricultural Production.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

The California Air Resources Board Crop Loss Air Pollutant Assessment
Program report has provided information to guide efforts to design

crop-effects studies, to perform economic analyses of yield loss, and to
prepare reports for other local, State, and Federal agencies on the
effects of air pollution on the public welfare. It found -

"In 1993, ozone-caused yield losses of 20-30% were estimated for cantaloupes, grapes, and cotton, which are known to be ozone-sensitive crops. Moderate losses (10-15%) were projected for dry beans, oranges, alfalfa, onions, and lemons. Minor losses (1-7%) were expected for ozone-tolerant crops such as tomato, wheat, rice, corn, and lettuce. GIS-based techniques were used to refine county-averaged estimates of yield loss in selected agricultural production areas. By plotting effects to acreages of irrigated farmlands only, differences in crop loss within a county could be accurately displayed. For example, cotton yield losses were 5-10% greater in the eastern portions of Fresno, Kings, and Tulare counties than in the western portions."

California Air Resources Board Research Notes: # 89-6 Crop Losses from
Air Pollution in California California Air Resources Board found -

"This research assessed the statewide effect of ambient ozone on the yield of important agricultural crops. Ozone dose-yield loss equations, ozone monitoring data, and county crop production data were used to estimate yield losses for each county and for the state as a whole. The study concludes that at current air quality levels, a number of important crops are suffering substantial yield losses. Based on these conclusions, an economic modeling study estimated that improving air quality could result in economic benefits of up to \$333 million to California growers and consumers."

The results of the Program in Crop Loss Assessment indicate that:

- 1) Ambient ozone is causing substantial yield losses in important California crops;
- 2) Substantial reductions in these losses could be realized by attainment of the State ambient air quality standard for ozone; and
- 3) Attaining the State standard for ozone may not be adequate to protect crops.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-OZONE on Agricultural Production.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

* 238 - AIR POLLUTION-RADIOACTIVE MATTER.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Radioactive Matter.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

There are two major types of radioactive air pollution - constant
low level and intermittent high level.
A low level (relatively) continuous example is the radioactivity released from burning wood in woodstoves.

"Radioactivity is neither spatially or temporally uniform, natural
radioactivity is neither physiologically nor biologically safe, any
amount of increased radiation, no matter how small, will increase the
number of persons affected by genetic disease."
A.M.O.Veale, "Biological
Effects of Fallout," New Zealand Science Review, 24(4), 49-50, 1966
cited by "Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 86

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Radioactive Matter.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

* 240 - AIR POLLUTION-PESTICIDES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Pesticides.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

AMBIENT AIR PESTICIDES
"FRESNO, California, February 20, 2001 (ENS) -
Independent scientific
monitoring by the Environmental Working Group (EWG) has
found high
concentrations of a partially banned pesticide in the air some
California residents breathe."

"One-third of ambient air monitoring samples from the San
Joaquin Valley
detected the pesticide chlorpyrifos, which the federal
government has
banned for home use as unsafe for children. Chlorpyrifos
remains the
most widely used agricultural insecticide in California." Ibid

"Monterey County ranks third in California for the number of
pesticide
poisonings in a year" according to the California Department
of
Pesticide Regulation in Sacramento in 1997.

Some 428 cases of pesticide poisoning were reported to
public officials
in Monterey County during a six year period. 50 cases of
pesticide
poisoning were reported in Monterey County in 1996.

Monterey county uses at least 10 million pounds of
pesticides every year.
(10 million pounds only includes the disclosed active
ingredients.)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the
objective
(non-subjective) CRITERIA used to determine the impact
significance of
Air Pollution-Pesticides.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe
how the threshold of significance chosen is scientifically
testable, repeatable, falsifiable,
credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS
(numbers) used to determine the significance for EACH
criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to
determine the significance for each criteria.

5b. If no method of measurement was used please state that
clearly for each criteria and explain thoroughly how the data
was obtained.

6. Please quantify the existing or current BASELINE
measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level
and whether the MARGIN of ERROR is measured or
assumed.

8. Please state the VARIANCE or fluctuation, assumed or
expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or
confidence level.

10. Please state whether this MARGIN of ERROR is
measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be
encountered.

13. Please describe and quantify which criteria and
ASSUMPTIONS the Impact Significance predictions are
most SENSITIVE.

14. Please analyze and quantify how sensitive those
predictions are to reasonably foreseeable varying criteria and
assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time
period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the
impact changes from significant to less-than-significant and
the clear criteria and rationale for that
number.

19. Please provide the MARGIN of ERROR used (in percent
and absolute amount) for measuring the Significance
THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is
measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the
impact changes from LEGAL to ILLEGAL for ALL related and
potentially relevant local, state and federal
laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP
with increasing input, other impacts have complex non-linear
relationships. Please provide a graph that shows
whether the relationship is linear or otherwise - when at and
near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM
CHANGE, to which the IMPACT could raise or lower the
baseline number and its MARGIN of ERROR or confidence
levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 241 - PESTICIDE DRIFT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Pesticide Drift.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Pesticide drift is that portion of the applied pesticide spray cloud which affects any biota outside the target area. All pesticides "drift" from their point of application. This drift can contaminate air, soils and water hundreds, and even thousands, of miles from where it was applied.

Talk to anyone who has experienced drift, however, and a complex picture emerges: a poisoned person who spends years trying to regain health; a pet injured or infertile; contaminated homes or property that must be abandoned; loss of a year's livelihood when contaminated crops can't be sold.

DRIFT HOW FAR?

Pesticides have caused damage 50 miles from their application site, traceable detection has occurred at 7,000 miles.

Pesticide drift has caused crop damage 50 miles from its application.
"In central Washington, 2,4-D applied to wheat fields drifted 10 to 50 miles and damaged vineyards." Air Pollution Control Association Journal 28:1015-1020, Robinson, E. and L.L. Fox 1978

Lead, Copper and Arsenic Air Pollution has been traced and measured traveling at least 7,000 miles from Manchuria, China to Crater Lake, Oregon exceeding 10 times Crater Lake's typical values. Science News, Dec 12, 1998

Arctic Pesticide Air Pollution - Hundreds of miles away. Pesticides including endosulfan, dieldrin, chlordane, heptachlor and hexachlorocyclohexane have been found in the snow of the upper Northwest Territories hundreds, and more likely thousands, of miles from any potential beneficial application. Air samples from Ellsmere Island, the northernmost land in Canada contain all those plus DDT, chlorobenzenes and toxaphene. (Pandora's Poison)

"Chemical Spray may drift, even on a slight breeze, and can kill nearby plants and insects." (Invasive Exotic Plants in Monterey County, brochure by Monterey County Planning Dept #293-0274 4/98)

Monterey County's top goal for its Agricultural Commissioner's office in 2001 is education about minimizing pesticide spray drift. Monterey County 2001-2002 Budget p 282

HOW MUCH DRIFTS?

"Some 50 percent [of pesticides applied by aerial crop dusters] to 75 percent miss the target area." BSR p 164 citing - "Pesticide Drift IV:

On Target deposits from aerial application of insecticides." J. of Economic Entomology 63: 1982-1983; Reducing Pesticide Application Drift Losses, G. Ware U of Arizona College of Ag.; "The Use of Pesticides in the Cultivation of Cotton in Central America", UN Environmental Programme, 1985 July-September.

"According to the US Dept of Agriculture no more than 2% (and often less than 0.1%) of the insecticides applied to crops by aerial spraying or by ground spraying actually reaches the target pests; less than 5% of herbicides applied to crops reaches the target weeds."

"No more than 2% of all the insecticide sprayed on a field finds its target, but every spider gets insect meals-or it does not live to reproduce. A typical acre of meadow or woods contains an estimated 50,000 to 2 million spiders, each devouring hundreds of insects per year."

Because of the loss to "drift" aircraft apply about 30% more pesticide than ground application. (Miller, Living in The Environment, 1999 pg 624)

FRESNO, California, February 20, 2001 (ENS) - A National Cancer Institute researcher who matched pesticide data and medical records in 10 California agricultural counties reported last week that pregnant women living within nine miles of farms where pesticides are sprayed on fields may have an increased risk of losing an unborn baby to birth defects.

"The smaller the particle - the farther downwind it will travel before settling out." In one experiment 450 pounds (8.6 x 10¹⁵th particles) of two (2) micron particles (Human hair is about 100 microns) of Zinc Cadmium, which fluoresces under UV light, were released from a ship traveling ten miles offshore over a course of 156 miles. The resulting pollution was detected over a land area of 34,000 square miles. Encyclopedia of Biological Sciences, P. Gray, McGraw-Hill 1961

Spray Droplet Size Affects Drift Distance
Surfactants can have two effects on droplet surface tension. They can Increase or Decrease surface tension, but they can not do both.

Increasing surface tension makes larger drops which drift less and do not adhere to plants as well.

Decreasing surface tension makes smaller drops which drift more and absorb better to target plants.

Please specify the maximum drift goal and the droplet size.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pesticide Drift.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 242 - TOXIC DRIFT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Toxic Drift.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Toxic flouride gas emissions from an aluminum ore reduction plant killed a large stand of trees in Spokane, Washington in the aerly 1950's, and significant foliar damage was observed in an 80 square kilometer (50 square mile) area. Wiley's Encyclopedia, p 644

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Toxic Drift.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-
* 243 - AIR POLLUTION-AMMONIA.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Ammonia.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Inhalation of ammonia and ammonia vapors, commonly used in fertilizer,
can cause serious injury.

"An ammonia spill from the J.M. Smucker Co. plant in North County closed
four Pajaro roads and tied up traffic for about three hours Tuesday
night." Herald Dec 15 1999

"A dairy rancher in Sonoma County is to appear in court to face criminal charges of polluting a creek with 732,000 gallons of cow waste. The waste went into Washington Creek and then into the Petaluma River five miles away. The high volume of ammonia in the waste is extremely toxic to fish." Herald Dec 15 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Ammonia.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 244 - NATIVE TREE PLANTING TO INCREASE AIR CLEANING BENEFITS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Native Tree Planting to Increase Air Cleaning Benefits.

Trees directly reduce air pollution by removing airborne particulates from the atmosphere and helping to purify the air. California Code 4799.07. The Legislature finds and declares that:

(d) Trees directly reduce air pollution by removing airborne particulates from the atmosphere and helping to purify the air.

Coniferous trees are much more effective (80% reduction in some particulates measured) at filtering air pollution than deciduous trees.
"Atmospheric Pollution", Wilfrid Bach, McGraw-Hill 1972 p 117

Please analyze tree planting as mitigation for air pollution.

* 245 - AIR POLLUTION-TOXIC CHEMICALS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Toxic Chemicals.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Toxic Chemicals.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 246 - CHLORINE GAS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Chlorine Gas.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Chlorine at 1000 ppm is normally fatal even if only for a few moments.
A concentration of 3.5 ppm produces a detectable odor; 15 ppm causes immediate irritation of the throat. Concentrations of 50 ppm are dangerous for even short exposures; 1000 ppm may be fatal, even when exposure is brief. [Lewis, R.J. Sax's Dangerous Properties of Industrial Materials. 9th ed. Volumes 1-3. New York, NY: Van Nostrand Reinhold, 1996. 718]**PEER REVIEWED**

Acute toxic levels: The extent of injury depends on the concn and duration of exposure as well as the water content of the tissue involved and the presence of underlying cardiopulmonary disease. ... Estimated clinical effects ... as follows: ... 1-3 ppm: Mild mucous membrane irritation; ... 5-15 ppm: Moderate irritation of upper resp tract; 30 ppm: Immediate chest pain, vomiting, dyspnea, cough; 40-60 ppm: Toxic pneumonitis and pulmonary edema; 430 ppm: Lethal over 30 min; 1000 ppm: Fatal within a few min. [Ellenhorn, M.J. and D.G. Barceloux. Medical Toxicology - Diagnosis and Treatment of Human Poisoning. New York, NY: Elsevier Science Publishing Co., Inc. 1988. 878]**PEER REVIEWED**

Chlorine's odor threshold is 0.01 ppm

NIOSH sets a maximum air pollution threshold of 0.5 ppm for 15 mins maximum.

Davis Instruments sells a Chlorine monitor for \$517 which measures down to 0.1 ppm. (800 269 0299)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Chlorine Gas.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal

laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 247 - AIR POLLUTION-SWIMMING POOL CHLORINE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Swimming Pool Chlorine.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Swimming Pools (home, apartment or municipal) typically disinfect with
poisonous chlorine gas. That gas can be released by fires
when heat can
rupture the tanks holding the gas, or by other accidents.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Swimming Pool Chlorine.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 248 - HYDROGEN SULFIDE.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Hydrogen Sulfide.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Davis Instruments sells a Hydrogen Sulfide monitor for \$375 which measures down to 1.0 ppm. (800 269 0299)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Hydrogen Sulfide.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 249 - DUST BLOWN FROM AREAS PERMANENTLY CLEARED OF VEGETATION.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Dust Blown from Areas Permanently Cleared of Vegetation.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"60,000 U.S. residents per year die from breathing particulates at or below legally allowed levels" - EPA, Joel Schwartz
The 60,000 figure is taken from "Air Pollution in Typical U.S. Cities Increases Death Risk," press release dated May 13, 1991, from the Harvard School of Public Health, Boston, Mass. describing findings later reported in Joel Schwartz and Douglas W. Dockery, "Increased Mortality in Philadelphia Associated With Daily Air Pollution Concentrations," AMERICAN REVIEW OF RESPIRATORY DISEASE Vol. 145 (1992), pgs. 600-604.
Two million deaths occur in the U.S. each year; according to Schwartz and Dockery, fine particles account for 3%.

Areas cleared of vegetation such as dirt parking lots, dirt roads and farms can cause substantial dust air pollution even in mildly windy times.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Dust Blown from Areas Permanently Cleared of Vegetation.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 250 - SMOKE.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Smoke.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Smoke can cause a number of significant environmental impacts including

human death, animal death, human health harm, animal health harm, home and building structure loss, structure damage, habitat loss, aircraft range limits, visual aesthetic loss (ugly skies and orange shadows), and repugnant smells.

Smoke can be made up of a wide range of toxic materials but it can be deadly all by itself. Smoke can be lethal even when there is no fire, just smoldering.

Smoke typically contains dense particulate air pollution.

When burning wild vegetation in California poison oak is often burned as well. Poison Oak in smoke is very harmful to lung and breathing airways.

According to the California state archivist smoke can contain damaging acids. article "Damages at Capitol could top \$8 million." AP Feb 10, 01

Smoke from fires colors shadows orange.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Smoke.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 251 - AIR POLLUTION-TOTAL SUSPENDED PARTICULATES BY CONCENTRATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Total Suspended Particulates by Concentration.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"PM10 is about 55 percent of the total TSP [total suspended particulates]; that is a TSP level of 100 micrograms/m³ is equal to a PM10 measurement of 55 micrograms/m³)." Economic Analysis of Environmental Impacts, 1996, Dixon et al, Earthscan Publishing

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Total Suspended Particulates by Concentration.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 252 - AIR POLLUTION-PM10 PARTICULATES BY CONCENTRATION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-PM10 Particulates by Concentration.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"PM10 is about 55 percent of the total TSP [total suspended particulates]; that is a TSP level of 100 micrograms/m³ is equal to a PM10 measurement of 55 micrograms/m³)." Economic Analysis of Environmental Impacts, 1996, Dixon et al, Earthscan Publishing

The concentration of an air pollutant is independent of its weight and more important to safe breathing.
No one has ever drowned by being surrounded by a cloud (which can have a mass of millions of pounds), but people often drown in just a few inches or ounces of water (concentrated cloud).

"60,000 U.S. residents per year die from breathing particulates at or below legally allowed levels" - written by Joel Schwartz EPA
The 60,000 figure is taken from "Air Pollution in Typical U.S. Cities Increases Death Risk," press release dated May 13, 1991, from the Harvard School of Public Health, Boston, Mass. describing findings later reported in Joel Schwartz and Douglas W. Dockery, "Increased Mortality in Philadelphia Associated With Daily Air Pollution Concentrations," AMERICAN REVIEW OF RESPIRATORY DISEASE Vol. 145 (1992), pgs. 600-604.
Two million deaths occur in the U.S. each year; according to Schwartz and Dockery, fine particles account for 3%. See also, Michael Weisskopf, "Particles in the Air Help Kill 60,000 a Year, Study Says," WASHINGTON POST May 13, 1991, pg. A13.

"The medical costs associated with the effects of [U.S.] particulate matter are estimated at nearly \$4 Billion each year."
-San Joaquin Valley Air Pollution Control Dist, Mar. 2000 newsletter.

What are the significance levels used for breathing concentrations versus time for PM10 Particulates?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-PM10 Particulates by Concentration.

- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
- 3b. Please quote the definition used.
4. If no measurement units are used please state that clearly.
- 5a. Please state the METHOD of measurement used to determine the significance for each criteria.
- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20a. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
30. Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 253 - AIR POLLUTION-PM10 PARTICULATES BY WEIGHT.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-PM10 Particulates by Weight.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- "PM10 is about 55 percent of the total TSP [total suspended particulates]; that is a TSP level of 100 micrograms/m³ is equal to a PM10 measurement of 55 micrograms/m³." Economic Analysis of Environmental Impacts, 1996, Dixon et al, Earthscan Publishing
- "60,000 U.S. residents per year die from breathing particulates at or below legally allowed levels" - written by Joel Schwartz EPA
- "The medical costs associated with the effects of [U.S.] particulate matter are estimated at nearly \$4 Billion each year."
-San Joaquin Valley Air Pollution Control Dist, Mar. 2000 newsletter.
- According to the MBUAPCD, approximately 40 pounds of PM10 are emitted per acre per day of construction activity.
- The San Luis Obispo Air Pollution Control District states that any activity creating 10 lbs of PM10 or more per day is a potentially significant impact; and any activity creating more than 137 lbs / day of PM10 requires an EIR in all cases.
- MBAPCD Significance Level for PM10 Particulates is 82 lbs / day. Their threshold of significance is then just over two acres of construction per day.
- What are the significance levels used?
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-PM10 Particulates by Weight.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 254 - AIR POLLUTION-PARTICULATES SUBPM-10.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Particulates SubPM-10.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Particulates below 5 micrometers are known as smoke and fume, those under 1 micrometer as aerosols. Particles smaller than 10 micrometers remain much longer as suspended matter in the air." Atmospheric Pollution, Wilfrid Bach, McGraw-Hill 1972 p 12

PM 2.5 means 2.5 micron particulates. (Human hair is about 100 microns)

"PM10 is about 55 percent of the total TSP [total suspended particulates]; that is a TSP level of 100 micrograms/m³ is equal to a PM10 measurement of 55 micrograms/m³." Economic Analysis of Environmental Impacts, 1996, Dixon et al, Earthscan Publishing
This means that the remainder, 45%, are particulates smaller than PM 10.

PM 2.5 typically remains in the air for 5 days.
"Very small particles in a size range of 1 to 4 microns in diameter are capable of passing the natural anatomical and physiological barriers of the upper respiratory tract (including the turbinates of the nose, the cilia of the trachea and the larger bronchi) and entering the alveolar bed of the lungs which are highly susceptible to infection." Encyclopedia of Biological Sciences, P. Gray, McGraw-Hill 1961

"The smaller the particle - the farther downwind it will travel before settling out." In one experiment 450 pounds (8.6 x 10¹⁵th particles) of two (2) micron particles of Zinc Cadmium, which fluoresces under UV light, were released from a ship traveling ten miles offshore over a course of 156 miles. The resulting pollution was detected over a land area of 34,000 square miles. Ibid

PARTICULATES: NEW STUDY INDICATES POSSIBLE HEALTH RISKS

"Tiny particles discharged into the air by cars can trigger fatal attacks of lung inflammation, blood clotting and heart attacks in vulnerable people," according to a new report published in the 1/21 issue of the British journal LANCET.

Studies of 14 different locations show that overall daily deaths, particularly from heart and lung disease, increase as the concentration of small particles in the air rises, the report says. Older people and smokers are most at risk. British scientists suggest that these particles, which are too small to settle or be dispersed by rain, "may

be the most important and dangerous aspect of pollution."

But corresponding studies in industrial centers do not show a similar increase in deaths, even in workers exposed to high concentrations of dust, scientists say. Particles from industrial pollution "tend to be larger and settle within hours." (London INDEPENDENT, 1/20).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Particulates SubPM-10.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 257 - DRYING BIOMASS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Drying Biomass.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The drying of lawn clippings released formaldehyde, methanol, acetyldehyde, acetone and other gases. The drying of millions of acres of cut alfalfa "could be quite a point source of [Volatile Organic Compound (Ozone precursor) pollution]." SciNews Apr 3, 99 citing Geophysical Research Letters, April 1, 99

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Drying Biomass.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 258 - CHIMNEY SMOKE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Chimney Smoke.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Particulate pollution is blamed for more than 1,600 premature deaths in the San-Bernardino-Riverside area of California.
-L.A.'s Lethal Air, Eric Mann, 1991

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Chimney Smoke.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

-

* 259 - LIQUID NATURAL GAS FUEL.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Liquid Natural Gas Fuel.

The first permanent Liquified Natural Gas fueling station was dedicated near Coalinga, California Feb 2000. Vehicles (primarily commercial trucks) using this burn a mixture of 85 percent LNG and only 15 percent diesel fuel. This significantly reduces NOX and diesel particulates.
-San Joaquin Valley Air Pollution Control Dist, Mar. 2000 newsletter.

-

* 260 - COMPRESSED NATURAL GAS FUEL.

The Document appears to have ignored this potentially feasible Alternative.
Please carefully analyze and disclose the potential benefits of Compressed Natural Gas Fuel.

The first permanent Liquified Natural Gas fueling station was dedicated near Coalinga, California Feb 2000. Vehicles (primarily commercial trucks) using this burn a mixture of 85 percent LNG and only 15 percent diesel fuel. This significantly reduces NOX and diesel particulates.
-San Joaquin Valley Air Pollution Control Dist, Mar. 2000 newsletter.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

-

* 261 - AIR POLLUTION-DIESEL VEHICLE EXHAUST.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Air Pollution-Diesel Vehicle Exhaust.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Diesel engine exhaust is on California's Prop 65 List of Known Carcinogens.

"Diesel trucks and buses are two of the worst polluters and account for 27 percent of smog and soot produced by all of the nation's motor vehicles. This pollution threatens air quality of wildlife habitat in urban and suburban landscapes."
DENLines, Friday, Aug 11, 2000 (Defenders of Wildlife newsletter)

"Though they constitute only one in 50 vehicles on California's roads, diesel trucks and buses contributes 60 percent of the soot that comes from motor vehicles and 30 percent of the nitrogen oxides."
San Jose Mercury Editorial, May 2000

Diesel exhaust is a toxic soup that contains at least sixteen different carcinogens. Numerous studies on mice and rats have indicated that exposure through inhalation causes cancer. Furthermore, epidemiological studies on occupationally exposed workers have revealed a strong causal association between diesel exhaust exposure and lung cancer. The report estimates the range of cancer risks associated with diesel exhaust to be 22 to 4,400 potential excess cancers among every million persons. Many experts consider even one in a million to be a significant health threat.

1) AUTO INDUSTRY: DIESEL FUEL CARCINOGEN
FOUND MOST DEADLY

Japanese scientists suspect a chemical they detected in the emissions of diesel engines "may be the most carcinogenic ever found, and may be the cause of a rise in urban lung cancers." New Scientist magazine reported last week that the chemical 3- nitrobenzanthrone was found to cause more cellular mutations than the compound previously thought to be the most carcinogenic, 1,6 dinitropyrene. Researcher Hitomi Suzuki of Kyoto U. called for more stringent limits on diesel trucks (Baltimore Sun, 10/23).

2) NIOSH ISSUES CANCER ALERT FOR DIESEL
EXHAUST FUMES RACHEL'S
ENVIRONMENT & HEALTH WEEKLY #120 ---March 14,
1989---

The federal government has recently concluded officially that there is another good reason to be concerned about increased truck traffic in your neighborhood: five separate studies in the last 3 years have shown that diesel exhaust certainly causes cancer in laboratory animals, and two studies of railroad workers show that it causes cancer in humans as well. As a result of this determination, the National Institute for Occupational Safety and Health (NIOSH) has issued a special publication, CARCINOGENIC EFFECTS OF EXPOSURE TO DIESEL EXHAUST, offering this recommendation:

"As prudent public health policy, employers should assess the conditions under which workers may be exposed to diesel exhaust and reduce exposures to the lowest feasible limits." Citizens may reasonably ask: if NIOSH believes workers should not be exposed to diesel exhaust because of the cancer hazard, can health officials in other parts of government believe that the general public should continue to be exposed to diesel exhaust? Taken in this light, risk assessments that discuss only the traffic hazards associated with a facility are missing the major point: diesel trucks can evidently kill innocent people even if no traffic accidents occur."

Diesel engines use a less-refined (thus cheaper and more plentiful) fuel. When diesel fuel burns in an engine's combustion chamber, the resulting exhaust contains gases and particles (soot). The gases include nitric oxide, nitrogen dioxide, oxides of sulfur, and hydrocarbons (e.g., ethylene, formaldehyde, methane, benzene, phenol, 1,3 butadiene, acrolein, and polynuclear aromatic hydrocarbons [PAHs], several of which are known carcinogens). Of the particles in diesel exhaust, 95% are less than 1 micron in diameter and thus they are respirable, which is to say they are easily taken into the deepest portions of the human lung where they may lodge forever. The core of each particle is made up of pure carbon, but as many as

18,000 different chemicals from the gaseous portion of the exhaust may be adsorbed (attached) onto the carbon core, and thus diesel exhaust can carry a whole host of exotic, toxic and carcinogenic chemicals into the deepest portions of your lung-down in the region where the transfer of gas occurs to put oxygen into your blood stream and to take carbon dioxide out.

As recently as 1986, NIOSH concluded that diesel exhaust did not cause cancer in laboratory animals. However, in the period 1986-1988, five long-term animal studies, and two epidemiologic studies of humans, all concluded that exposure to diesel exhaust causes lung cancer. As a result, NIOSH reversed itself and in August, 1988, issued a special "current intelligence bulletin" to get the word out that diesel fumes are dangerous. NIOSH estimates that 1.35 million American workers are routinely exposed to diesel exhausts.

July 18, 1997 Calif ARB Releases Report on Listing Diesel
Exhaust as a
Toxic Air Contaminant

After spending eight years evaluating the health effects of exposure to diesel exhaust, the California Air Resources Board (ARB) and California Office of Environmental Health Hazard Assessment (OEHHA) have released a report recommending the listing of diesel exhaust as a toxic air contaminant (TAC).

Under state law, the ARB is required to identify a substance as a TAC if the substance is "an air pollutant which may cause or contribute to an increase in mortality or an increase in serious illness, or which may pose a present or potential hazard to human health." Due to both its carcinogenic potential and its non- carcinogenic respiratory effects, diesel exhaust clearly qualifies as a TAC.

Not only does diesel exhaust have carcinogenic health effects, but it also has noncancer pulmonary effects. Diesel exhaust is a major contributor to particulate pollution, which U.S. EPA estimates causes the premature death of 35,000 people each year. The wealth of evidence behind the EPA's new standard for fine particulates demonstrates the serious health consequences for everyone, but especially for sensitive

populations, such as children, the elderly, and those with heart and lung disease.

The ARB/OEHHA report may even underestimate risk. It does not take into account exposure to spikes in diesel exhaust, though we know that short-term exposures to high concentrations of particulate matter are dangerous. It also does not adequately address the increased risk to sensitive populations or combined effects of simultaneous exposure to diesel exhaust and other carcinogens.

The evidence is clear that diesel exhaust poses a hazard to human health. Since ARB and OEHHA have been evaluating diesel exhaust since 1989, listing as a TAC is now long overdue.

Labware Direct (1 800 356 0783) sells Diesel exhaust detection system measuring concentrations of "High Class" hydrocarbons as low as 100 ppm; "Low Class" hydrocarbons as low as 0.05%; and petroleum distillates as low as 0.5 mg/Liter.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Air Pollution-Diesel Vehicle Exhaust.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 262 - AIR POLLUTION-DIESEL DELIVERY VEHICLE EXHAUST PARTICULATES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Diesel Delivery Vehicle Exhaust Particulates.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Delivery vehicles almost always use diesel engines.
Delivery vehicles almost always leave their engines running when
unloading. Stopped, running Delivery vehicles have impacts from the
exhaust, noise and "parking" if you can call stopping in a
roadway parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of

Air Pollution-Diesel Delivery Vehicle Exhaust Particulates.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 263 - AIR POLLUTION-DIESEL VEHICLE EXHAUST PARTICULATES DURING CONSTRUCTION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Air Pollution-Diesel Vehicle Exhaust Particulates during Construction.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

How many pounds of diesel fuel does each vehicle burn per hour?

How many hours per day will each vehicle operate?

What is the maximum amount of diesel fuel which could be burned by all
engines combined per day? Include vehicles (e.g. Bulldozers, Trucks) and
stationary sources such as Generators.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Air Pollution-Diesel Vehicle Exhaust Particulates during Construction.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 264 - ELECTROSTATIC PRECIPITATOR FOR DIESEL EXHAUST PIPES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of Electrostatic Precipitator for Diesel Exhaust Pipes.

Electrostatic Precipitators can remove up to 99 percent of particulate pollution from coal fired electric plants. (Environmental Science; Morgan, Moran & Weirsma; W.C. Brown Pub. 1993, p 359) It is reasonable to assume that Electrostatic Precipitators can remove significant percentages and amounts of Diesel particulates.

* 265 - VEHICLE EXHAUST - STARTUP.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Vehicle Exhaust - Startup.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

The first five minutes of automobile exhaust causes a very high amount of air pollution.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Vehicle Exhaust - Startup.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 266 - TRUCK EXHAUST.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Truck Exhaust.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Trucks typically burn diesel fuel.
There is no regulation of diesel exhaust pollution.
Truck exhaust increases as they accelerate from a stop.
Truck exhaust increases as they whine uphill.

"Diesel trucks and buses are two of the worst polluters and account for 27 percent of smog and soot produced by all of the nation's motor vehicles. This pollution threatens air quality of wildlife habitat in urban and suburban landscapes."
DENLines, Friday, Aug 11, 2000 (Defenders of Wildlife newsletter)

"Though they constitute only one in 50 vehicles on California's roads, diesel trucks and buses contributes 60 percent of the soot that comes from motor vehicles and 30 percent of the nitrogen oxides."
San Jose Mercury Editorial, May 2000

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of
Truck Exhaust.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 267 - DELIVERY VEHICLES EXHAUST.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Delivery Vehicles Exhaust.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Delivery vehicles almost always use diesel engines.
Delivery vehicles almost always leave their engines running.
Stopped, running Delivery vehicles have impacts from the exhaust, noise
and "parking" if you can call stopping in a roadway parking.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Delivery Vehicles Exhaust.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 268 - DOG BARKING.**

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Dog Barking.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Very Large Dogs, Barking and Howling" can generate 85 decibels.

National Institute Deafness, Acoustic consultants and airport consultants, cited by E. Knapp AIA, Architect - Analyst, Eagan MN,
Specialist in Animal Facility Design & Planning.

Dogs Barking can make 80 dbA at 10 meters. from
"Operational Conditions
for Continuous Mining Systems in Hard Rock Open Pit Mines", 15-08-1996

This is about the same noise level as a loud sink garbage disposal.

"Unhealthy noise shall include, but not be limited to, that noise

created by a dog barking for 15 continuous minutes."
Smithtown, New York
Town Ordinance, 1984

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Dog Barking.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 269 - MOVE THE NOISY ACTIVITY.

Each time you double or halve the distance to the noise source, the noise level changes by 6dBA.

This effect can be nullified and even reversed, by noise reflection from smooth surfaces including water, buildings, roads and atmospheric inversions.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Move the Noisy Activity.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Move the Noisy Activity.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Move the Noisy Activity.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Move the Noisy Activity.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Move the Noisy Activity.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Move the Noisy Activity.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSIs and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 270 - ENCLOSE THE NOISY ACTIVITY.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Enclose the Noisy Activity.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Enclose the Noisy Activity.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Enclose the Noisy Activity.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Enclose the Noisy Activity.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:

Enclose the Noisy Activity.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Enclose the Noisy Activity.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

R. What will it cost, in time and money, to replace the loss from the impact?

* 273 - PROHIBIT THE NOISY ACTIVITY AND ENFORCE PENALTIES.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:

Prohibit the Noisy Activity and Enforce Penalties.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1. Please describe the "Back-up", Secondary or Reserve Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Prohibit the Noisy Activity and Enforce Penalties.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Prohibit the Noisy Activity and Enforce Penalties.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Prohibit the Noisy Activity and Enforce Penalties.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibit the Noisy Activity and Enforce Penalties.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibit the Noisy Activity and Enforce Penalties.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSI's and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

M1. Please explain clearly how long it takes each agency listed above to issue a stop order after a valid complaint is filed.

M2. Please give a specific example of a real complaint that resulted in a stop work order for failure to comply with a mitigation measure for each agency.

MITIGATION LOCATION

N1. Please describe the exact physical location(s) for the proposed primary mitigation.

N2. Please describe the exact physical location(s) for the proposed secondary mitigation.

MITIGATION IMPACTS

Mitigation measures normally create their own impacts.

O1. Please list all potential impacts from the primary mitigation measure

O2. Please quantify all potential environmental impacts from the primary mitigation measure.

O3. Please qualify all potential impacts from the primary mitigation measure.

P1. Please list all potential impacts from the secondary mitigation measure

P2. Please quantify all potential environmental impacts from the secondary mitigation measure.

P3. Please qualify all potential impacts from the secondary mitigation measure.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 274 - PROHIBITION AND PENALTIES FOR NOISE EXCEEDING AMBIENT BY 5 DBA BEFORE 9AM.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:

Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the primary mitigation measure: Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

C3. If there are no successful examples for the primary measure - please identify the proposed mitigation measure as speculative or experimental.

C4. If there are no successful examples for the secondary measure - please identify the proposed mitigation measure as speculative or experimental.

D1. TRACK RECORD STUDY

Please provide a survey reporting the number of times this primary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.

D2. Please provide a survey reporting the number of times this secondary mitigation measure has been attempted, and the ratio of successful vs unsuccessful implementations. If no such study is available - please identify as speculative or experimental the proposed mitigation measure:
Prohibition and Penalties for Noise Exceeding Ambient by 5 dbA before 9am.

NEW LEVEL IF SUCCESSFUL

E1. Please state the new total number if the proposed primary mitigation measure is successful.

E2. Please state the new total number if the proposed secondary mitigation measure is successful.

E3. Please state the total change, in PERCENT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E4. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E5. Please state the total change, in PERCENT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E6. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

E7. Please state the degree, in ABSOLUTE AMOUNT, to which the primary mitigation measure would raise or lower the maximum impact amounts.

E8. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

E9. Please state the degree, in ABSOLUTE AMOUNT, to which the secondary mitigation measure would raise or lower the maximum impact amounts.

E10. Please state whether this total maximum change amount is an average amount, a worst case expected or a best case expected.

F1. Please state the deadline when this primary Mitigation Measure must be completed.

F2. Please state the deadline when this secondary Mitigation Measure must be completed.

G. MONITORING

Unfortunately most mitigation measures are inadequate or fail or both. "The U.S. EPA studied 1200 Environmental Assessments and FONSIs and estimated that 70% of them contained either inadequate mitigation measures or no mitigation measures.

So the public can determine the probability of the ability of the Agency to enforce the mitigation measures -

G1. Please explain clearly how the primary mitigation measure will be monitored.

G2. Please explain clearly how the secondary mitigation measure will be monitored.

G3. Please explain clearly what date-certain deadlines will be used to determine whether this primary mitigation measure has failed.

G4. Please explain clearly what specific performance criteria will be used to determine whether this primary mitigation measure has failed by the deadlines listed above.

G5. Please explain clearly what date-certain deadlines will be used to determine whether this secondary mitigation measure has failed.

G6. Please explain clearly what specific performance criteria will be used to determine whether this secondary mitigation measure has failed by the deadlines listed above.

G7. Please explain clearly which other specific criteria will be used to determine whether the primary mitigation measure has failed.

G8. Please explain clearly which other specific criteria will be used to determine whether the secondary mitigation measure has failed.

G9. Please explain clearly how much money will be needed to adequately monitor these mitigations.

G10. Please explain the source and the quantify the certainty of the money needed to adequately monitor these mitigations.

H1. Please explain clearly how this primary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

H2. Please explain clearly how this secondary mitigation measure will be protected from impacts of future projects and all non-discretionary activities.

MONITORING FREQUENCY

I1. Please describe carefully how often this primary mitigation measure will be monitored.

I2. Please describe carefully how often this secondary mitigation measure will be monitored.

J1. Please describe clearly how long the primary mitigation should last.

J2. Please describe clearly how long the secondary mitigation should last.

AGENCY ENFORCEMENT

K1. Please list all agencies who will enforce the primary mitigation measure.

K2. Please list all agencies who will enforce the secondary mitigation measure.

One of California's few examples of a fully enforceable legal violation is a parking ticket. If the ticket is not paid, ultimately a vehicle's registration will not be renewed.

L1. Please explain clearly how the primary mitigation measure will be fully enforced.

L2. Please explain clearly how the secondary mitigation measure will be fully enforced.

EXPERT QUALIFICATIONS

Q1. Please name each expert who prepared and reviewed the primary mitigation measure.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

* 275 - CONSTRUCTION PROHIBITION BETWEEN CERTAIN HOURS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Construction Prohibition Between Certain Hours.

A typical noise mitigation measure is to prohibit construction between the hours of 5 pm and 9 am.

This measure provides ZERO noise mitigation for people who must be home during the day including infants, immobile people, those who work at home, and those who are retired.

* 276 - PROMOTE DEAFNESS AS AN ASSET.

"A former Toledo Mayor's solution to airport noise was to move in people who were hard of hearing." Unte Reader, "Now Hear This," Sept 1998

"The construction would take place adjacent to the Hearing Center, an agency for the hard of hearing, so there would be no potentially significant environmental noise impact." Environmental Impact Report for Pile Driving, Coughman & Bread Consultants, January 1999

The first paragraph above is real. The second is fiction.

MITIGATION QUANTIFICATION

PRIMARY MITIGATION MEASURE:
Promote Deafness as an Asset.

"CURE WORSE THAN THE DISEASE"

This Mitigation Measure is of the wrong type, inadequate, not fully enforceable and causes its own potentially significant environmental impacts.

BACK-UP MITIGATION MEASURE:

A1 . Please describe the "Back-up", Secondary or Reserve" Mitigation measure in case the primary mitigation measure fails.

A2. If there is no Back-up Mitigation Measure please state that clearly.

MITIGATION IMPACT REDUCTION

B1. Please state the Absolute Amount of impact reduction contributed by the Primary mitigation measure:
Promote Deafness as an Asset.
using the same units of measure used to determine the impact.

B2. Please state the Absolute Amount of impact reduction contributed by the Secondary mitigation measure using the same units of measure used to determine the impact.

B3. Please state the impact reduction, in Percent, contributed by the primary mitigation measure:
Promote Deafness as an Asset.
using the same units of measure used to determine the impact.

B4. Please state the impact reduction, in Percent, contributed by the secondary mitigation measure using the same units of measure used to determine the impact.

TRACK RECORD EXAMPLE

C1. Please cite at least one real world example of successful

implementation of an identical or reasonably identical example for the primary mitigation measure: Promote Deafness as an Asset.

C2. Please cite at least one real world example of successful implementation of an identical or reasonably identical example for the back-up mitigation measure.

This would be an example that is in place and has been self-sustaining for a minimum of 5 years; Include clear descriptions of mitigation measures, how long the mitigation measure has been operating, where in the process the mitigation is now, and what percentage of mitigation has been successful, and how successful is defined.

Q2. Please name each expert who prepared and reviewed the secondary mitigation measure.

Q3. Please cite each expert's training, competence and experience specific to the primary mitigation measure.

Q4. Please cite each expert's training, competence and experience specific to the secondary mitigation measure.

R. What will it cost, in time and money, to replace the loss from the impact?

-

* 277 - HAMMERING NAILS.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Hammering Nails.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Hammering Nails can generate 130 dBA.
The sounds lasts only about 10 ms.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Hammering Nails.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 278 - MONTEREY BAY NATIONAL MARINE SANCTUARY.

The Document appears to have ignored this potentially significant impact.

Please carefully analyze and disclose the project's potential impacts on Monterey Bay National Marine Sanctuary.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The Monterey Bay National Marine Sanctuary is a federally protected marine area stretching from Marin to Cambria and from the mean high water line to a maximum of 50 miles offshore. It encompasses 276 miles of shore and covers 5,322 square miles. It was established primarily to protect natural resources. It is home to a rich diversity of living organisms.

National Marine Sanctuaries Act requires Federal Lead agency to consult with Dept of Commerce on any activities "that are likely to destroy, cause the loss of or injure any sanctuary resource." (16 USC Sec 1434 (d))

Aircraft traffic at 500 feet is prohibited within a Sanctuary near wildlife species.

"One of the largest California Sea Lion haulouts in central California is at the end of the Coast Guard pier in Monterey." NOAA comments on Marine Exercise Mar 1, 1999

Federal regulations governing the MBNMS require all DOD activities affecting the Sanctuary to be "carried out in a manner that avoids to the maximum extent practicable any adverse impacts on Sanctuary resources and qualities" 15 CFR Sec 922.132 (c)(1)

MMPA The Marine Mammal Protection Act 1972, USC 16 establishes a moratorium on the taking ("harass, hunt, capture or kill") and importation of marine mammals and marine mammal products, with exceptions for scientific research, allowable incidental taking, exemptions for subsistence activities by Alaskan natives and hardship exemptions (16 U.S.C. 1371). It requires all private or public actions that intentionally take marine mammals to get a permit.

It covers marine mammals that are: a) morphologically adapted to the marine environment (including sea otters and members of the order Sirenia, Pinnipedia and Cetacea), and b) primarily inhabit the marine environment (e.g., polar bears) FWS covers polar bears, sea otters, walrus, manatees and dugongs. NMFS covers the rest.

All whales, sea lions, harbor seals and sea otters are protected under the Marine Mammal Protection Act. The act was created because of a film of tuna fishermen killing Dolphins.

"Monterey Bay" is in the preliminary list of acoustic hotspots compiled by National Resources Defense Council report Summer 1999 due to Shipping, pleasure craft and the ATOC project. In addition there are regular visits by large military ships, explosives use proposed by coastal developers (Final EIR Cannery Row Market Place in Monterey), kelp harvesting boats, commercial fishing boats (including deep sea trawlers), and whale watching boats.

Some fishing is conducted at night with blazing light arrays to attract squid and fish. This may violate the MMPA.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Monterey Bay National Marine Sanctuary.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 279 - CARMEL BAY AREA OF SPECIAL BIOLOGICAL SIGNIFICANCE (ASBS).

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Carmel Bay Area of Special Biological Significance (ASBS).

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Carmel Bay is designated by the state of California as an Area of

Special Biological Significance (ASBS).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Carmel Bay Area of Special Biological Significance (ASBS).

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 280 - CARMEL BAY ECOLOGICAL RESERVE.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Carmel Bay Ecological Reserve.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Invertebrates may not be taken. No commercial fishing except kelp harvesting. This includes all waters inshore of a line from Pescadero Pt to Granite Point in Point Lobos. It also includes the unattached "Pinnacles" underwater rocks.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Carmel Bay Ecological Reserve.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

* 284 - HIGHWAY 68 AS A SCENIC HIGHWAY.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Highway 68 as a Scenic Highway.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

State Highway Code Sec 261 states the Scenic highways "require continuing and careful coordination of planning, design, construction, and regulation of land use and development, by state and local agencies as appropriate, to protect the social and economic values provided by the state's scenic resources."

Highway 68 is an officially designated Scenic Highway.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Highway 68 as a Scenic Highway.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 285 - SUBDIVISIONS-RESIDENTIAL.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Subdivisions-Residential.

If you claim the document contains proof of no-significant impact for
this impact please explicitly state the page number and paragraph.

This project will increase the amount of water use, groundwater or surface water pumping, impermeable surfaces, asphalt road surfaces, fencing, lighting and noise.

These will cause potentially significant environmental impacts including increased Carmel River dewatering which causes loss of habitat for listed species and has caused deaths of listed species, reduction of groundwater recharge, increased stormwater runoff, increased soil erosion, increased oil-air pollution, increased oil-water pollution, prevention of migration or immigration of wildlife which causes loss of habitat for listed species and can cause deaths of listed species.

Visual Preference Survey Results
In early 1993, Portland set out to find out what kind of neighborhoods their residents preferred (Picture This...The Results of a Visual Preference Survey, A Nelessen Associates, Princeton NJ & Seattle WA, 206-441-7579, June 1993). At 34 widely publicized public meetings, 3000 adults and 1,500 children viewed 240 slides of urban neighborhoods and shopping areas, and gave their gut responses to the scenes on a scale of -10 ("ugh," "awful") to +10 ("beautiful," "nice"). The people spoke...what did they say?

Let's look at a scene they strongly liked: a narrow tree-lined residential street, with wide sidewalks, mature trees, small bungalows mixed with articulated, not monolithic. No parking is visible except at the curb.

Another: small parks and public spaces with trees, other plantings, attractive walks, seating, tables, and maybe fountains and ponds.

Some scenes repelled them: Single family dwellings dominated by wide garage doors and driveways, with wide streets, no sidewalks and few trees.

There was a remarkable consensus. People don't like strip commercial development or large parking lots, either in shopping areas or near housing. They have a strong preference for pedestrian-oriented mixed-use development at transit station and along main streets, with higher densities in central cities.

In residential neighborhoods, viewers preferred small vernacular bungalows with pedestrian-oriented neighborhood centers. Residential densities of 25 units/acre or higher were quite acceptable if the buildings were articulated and built with quality and beauty. They loved small parks and open spaces. These results are helping to turn around 50

years of zoning policy which prohibits much of what people really prefer.

Housing Infrastructure Costs
Each house built in the U.S. in 1998 needs about \$25,000 in infrastructure including, roads, electric lines, phone lines, water pipes, sewerage pipes.
-Environmental News Network, June 15, 1999

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Subdivisions-Residential.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 286 - SWIMMING POOLS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Swimming Pools.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Swimming Pools have adverse environmental impacts including high water use, chlorine use, chlorine air and water pollution runoff.

"Swimming pools evaporate about 2 inches of water per week."

Bruce Dormody, Rancho San Clemente, personal communication

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Swimming Pools.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 287 - SOIL ECOSYSTEM.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of
Soil Ecosystem.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"We have to stop treating soil like dirt."
Dave Brower, LtMT, LtRR, 1995

"Soil is one of the least appreciated parts of our life-support system."
The consequences would be dire indeed if human activities were to seriously undermine the soil's ability to recycle nutrients - a process of recycling that depends on a myriad of bacteria, fungi and insects."
OSF pg 242

"Moles, Badgers and Rabbits dig impressive branching tunnel apartments."
Scientific American, Dec 1998, p 120

Each acre of soil can contain some two tons of microorganisms including
Molds (2000 pounds), Bacteria (1000 pounds), Actinomycetes (1000 pounds), Protozoa (200 pounds), Algae (100 pounds), Yeasts (100 pounds) and Viruses. Other forms of life in soil include plant roots, earthworms, mites and insects. Encyclopedia of Biological Sciences,
Gray, 1961 McGraw-Hill

There are billions of microorganisms in a single teaspoon of topsoil.
-Audubon, Almanac of the Environment, 1994

As a generality Soil contains ~ 45% minerals, 20-30% air, 20-30% water and 5% organic material.

"The presence of moisture in soil is essential for the development of microorganisms. Most mineral soils display optimum microbial activity at moisture levels close to 60% saturation." Encyclopedia of Biological Sciences, Gray, 1961 McGraw-Hill

By contributing to formation of humus, microorganisms increase soil's drought resistance, base exchange capacity and protection of the microorganisms themselves from chemical pesticides. Ibid

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Soil Ecosystem.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 288 - SOIL STRUCTURE.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Soil Structure.

One can place all the native ingredients of a soil on the ground, but there is no evidence that this replaces a former soil structure.

* 289 - SOIL REMOVAL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Soil Removal.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Removing soil can permanently change or destroy the ability of land
to support plant life. Some soils take a million years or more to create.

A single truck can carry about 10 cubic yards of soil or rock. Every 100 cubic yards of material removed requires at least 10 round trip truck trips - or 20 one-way truck trips. This does not include the heavy vehicle trips required for the equipment to load the trucks nor the support vehicles used by the employees.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Soil Removal.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 290 - CONSTRUCTION CAUSED LOSS OF TOPSOIL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Construction Caused Loss of Topsoil.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance of Construction Caused Loss of Topsoil.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 291 - PESTICIDE IMPACTS ON SOIL ECOSYSTEM.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Pesticide Impacts on Soil Ecosystem.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"Soil is one of the least appreciated parts of our life-support system."
The consequences would be dire indeed if human activities were to seriously undermine the soil's ability to recycle nutrients - a process of recycling that depends on a myriad of bacteria, fungi and insects."
OSF pg 242

There are billions of microorganisms in a single teaspoon of topsoil.
-Audubon, Almanac of the Environment, 1994

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pesticide Impacts on Soil Ecosystem.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 292 - PESTICIDE IMPACTS ON MICROORGANISMS.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Pesticide Impacts on Microorganisms.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

"A cubic centimeter of forest soil typically contains 1200 - 1300 individual species of microorganisms." Dr. Arthur Partridge, U of Idaho, Professor Emeritus, Forest Ecosystems

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

- 1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pesticide Impacts on Microorganisms.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

* 296 - LOSS OF TOPSOIL.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Loss of Topsoil.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

The world loses 7 percent of its topsoil per decade.
-Audubon, Almanac of the Environment, 1994

It can take 5000 years to produce five inches of topsoil. Ibid

Please quantify maximum potential topsoil (A,B & C horizons) loss in mass.

How many cubic meters (or yards) of soil will be moved?

Moving soil or rocks by truck on public roads requires a weight ticket for each load.

How will the weight of each truckload be monitored completely and

accurately?

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Loss of Topsoil.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 297 - SOIL DEPTH.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Soil Depth.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Please quantify and map soil (A,B & C horizons) loss in centimeters (or inches).

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Soil Depth.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 298 - SOIL FERTILITY.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of
Soil Fertility.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

There are billions of microorganisms in a single teaspoon of topsoil.

-Audubon, Almanac of the Environment, 1994

Please describe and quantify the minerals, organic material and pH in the potentially lost soils soil (A,B & C horizons) in terms of soil fertility.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Soil Fertility.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 299 - INCREASED IMPERMEABLE SURFACE AREA REDUCING GROUNDWATER RECHARGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Increased Impermeable Surface Area Reducing
Groundwater Recharge.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Increased impervious or impermeable area harms rain infiltration.
Impervious surfaces include buildings, homes, parking lots and streets.
"Naturally occurring undisturbed areas typically infiltrate 60 percent of rain depending on soil type. Clearing and grading a site typically removes existing vegetated areas that retain the inherent infiltration capacity of undisturbed areas." AMBAG's Pajaro River Watershed Management Draft Plan March 1999

"In the mid-Atlantic states an acre of impervious area may reduce groundwater recharge and groundwater flow to wetlands, streams, tidal waters by 300,000 (almost one acre foot) gallons per year. A decline in recharge may also affect the amount of water available to those who get their water through wells." The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

If a forest is converted to managed turf, then recharge may decrease by 15% (EPA, 1982. Results of the Nationwide Urban Runoff Program. Vol. 1 & Appendices, Water Planning Division).
"For each acre of forestland replaced with grass, base flow may diminish by 41,000 gallons per year. Converting that same acre to a parking lot or a clubhouse site would prevent the entire quarter-million gallons of rainfall from becoming base flow." Richard Klein, 1993

Please provide clear factual basis and reasoning how any Groundwater Recharge lost to an increase in impervious surface might be reduced

(e.g. locations, size in areas).

Please use as impact measuring criteria: area and provide a map.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Impermeable Surface Area Reducing Groundwater Recharge.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 300 - IMPERMEABLE SURFACE AREA INCREASING STORM RUNOFF.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Impermeable Surface Area Increasing Storm Runoff.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Watersheds affected include --
Asilomar Beach Creek, borders Pebble Beach
Lake Majella (artificial in early 1900's)
Majella Seep - on USGS Maps
Sawmill Gulch
South Moss Beach Stream
Marcheta Lane creek (thru MPCC Gc)
Seal Rock Creek
Indian Village Creek
Cypress Point Golf Course Drainage & Wetland
East Stillwater
North Carmel Beach (Jeffers') Stream
Pescadero Creek

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Impermeable Surface Area Increasing Storm Runoff.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.	26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	Please carefully analyze and disclose the potential impacts of Impermeable Surface Area Harming Trees & Vegetation.
5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.	27. Please state whether the MARGIN of ERROR is measured or assumed.	If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.	28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.	Impermeable Surface Areas prevent and restrict rain from reaching Trees and plant roots.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.	29. Please list all potential CUMULATIVE impacts related to this one.	QUANTIFICATION OF BASELINES AND IMPACTS: This impact appears to be potentially significant.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.	30. Please describe all potential CUMULATIVE impacts related to this one.	1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Impermeable Surface Area Harming Trees & Vegetation.
9. Please state the variance's MARGINS of ERROR or confidence level.	31. Please quantify all potential CUMULATIVE impacts related to this one.	1b. If no objective criteria are used please state that clearly.
10. Please state whether this MARGIN of ERROR is measured or assumed.	32. Please list, describe and quantify all potential compound and synergetic impacts.	2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
11. If an average is used, please state which kind of average.	33. Please list, describe and quantify all Construction impacts related to this one.	3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.
12. Please state the most extreme values which could be encountered.	34. Please list, describe and quantify all Growth impacts related to this one.	3b. Please quote the definition used.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.	35. Please list, describe and quantify all Indirect impacts related to this one.	4. If no measurement units are used please state that clearly.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.	36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.	5a. Please state the METHOD of measurement used to determine the significance for each criteria.
15. Please provide a graph of HISTORICAL measurements.	37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.	5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
16. Please quantify the length of time this impact would last.	38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.	6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.	39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.	7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.	40. Please state whether the margin of error is measured or assumed.	8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.	41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.	9. Please state the variance's MARGINS of ERROR or confidence level.
20a. Please state whether this MARGIN of ERROR is measured or assumed.	42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.	10. Please state whether this MARGIN of ERROR is measured or assumed.
20b. If no margin of error is used please state that clearly.	43. Please name each EXPERT who prepared and reviewed this impact.	11. If an average is used, please state which kind of average.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.	44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.	12. Please state the most extreme values which could be encountered.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.	45. Please provide AVOIDANCE MITIGATION for this impact.	13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	46. Please provide the reverse of this impact as Mitigation.	14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
24. Please state whether the MARGIN of ERROR is measured or assumed.	47. Please provide an ALTERNATIVE which avoids this impact.	15. Please provide a graph of HISTORICAL measurements.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.	48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.	16. Please quantify the length of time this impact would last.
	-	17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
	* 301 - IMPERMEABLE SURFACE AREA HARMING TREES & VEGETATION.	
	The Document appears to have ignored this potentially significant Impact.	

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 302 - SIDEWALK AND ROAD BUMPS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Sidewalk and Road Bumps.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Impermeable surface areas prevent and restrict rain from reaching tree and plant roots. Ordinary roots rarely break the soil surface, but when root watering by rainfall is prevented or restricted by impervious surfaces the roots rise and grow upwards often breaking through sidewalks and streets.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Sidewalk and Road Bumps.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 303 - REMOVAL OF IMPERVIOUS SURFACES.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Removal of Impervious Surfaces.

So there is no net loss of impervious surface, an area at least equal to the proposed increase of impervious surface should be cleared of covering.

* 304 - DRIVEWAYS AND PARKING AREAS MADE WITH "GRASSCRETE".

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Driveways and Parking Areas made with "Grasscrete".

The use of "Grasscrete" or other similar coverings can almost completely eliminate increased stormwater runoff that would occur with a paved area.

* 305 - SIDEWALKS MADE WITH INTERLOCKING PAVERS.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Sidewalks made with Interlocking Pavers.

The use of "Grasscrete" or Interlocking Pavers or other similar coverings allows some water to percolate into the soil to nourish trees and other plants and vegetation living in sidewalk planters. The use of Interlocking Pavers is in Carmel-by-the-Sea's Driveway and Public ways policies.

* 306 - NATIVE TREE PLANTING TO REDUCE RUNOFF.

The Document appears to have ignored this potentially feasible Mitigation.

If you do not adopt this mitigation measure, please explain fully why it is not feasible.

Please carefully analyze and disclose the potential benefits of
Native Tree Planting to Reduce Runoff.

California Code 4799.07. The Legislature finds and declares that:
(e) Trees also help reduce noise, provide habitat for songbirds and other wildlife, reduce surface runoff and protect urban water resources,

and enhance the aesthetic quality of life in the city.

* 307 - STORMWATER DIVERSION FROM ORIGINAL WATERSHED.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Stormwater Diversion from Original Watershed.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

When streets are paved and gutters installed stormwater is normally channeled into stormwater capture and guidance systems. On gently sloping ground with subtle watershed divides (such as Pacific Grove California, stormwater guidance systems can and do redirect stormwater flows into adjacent watersheds. This can increase non-point source pollutants in the new watershed and decrease the freshwater flows and the nutrients it delivers in the former watershed.

Please use as impact measuring criteria: weight or mass of water diverted.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of
Stormwater Diversion from Original Watershed.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.	32. Please list, describe and quantify all potential compound and synergetic impacts.	why it is not feasible.
11. If an average is used, please state which kind of average.	33. Please list, describe and quantify all Construction impacts related to this one.	Please carefully analyze and disclose the potential benefits of Conservation Easements to Protect Existing Vegetation and Undisturbed Areas.
12. Please state the most extreme values which could be encountered.	34. Please list, describe and quantify all Growth impacts related to this one.	-
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.	35. Please list, describe and quantify all Indirect impacts related to this one.	* 310 - SMALLER FOOTPRINT STRUCTURES TO MINIMIZE IMPERVIOUS SURFACES.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.	36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.	The Document appears to have ignored this potentially feasible Alternative. Please carefully analyze and disclose the potential benefits of Smaller Footprint Structures to Minimize Impervious Surfaces.
15. Please provide a graph of HISTORICAL measurements.	37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.	The smaller the structure footprint, the less the impervious surface loss.
16. Please quantify the length of time this impact would last.	38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.	ALTERNATIVE FACTUAL ANALYSIS
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.	39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.	There is little or no factual evidence in the document showing why this alternative is infeasible.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.	40. Please state whether the margin of error is measured or assumed.	A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.	41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.	A1. If no objective criteria are used please state that clearly.
20s. Please state whether this MARGIN of ERROR is measured or assumed.	42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.	A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.
20b. If no margin of error is used please state that clearly.	43. Please name each EXPERT who prepared and reviewed this impact.	B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.	44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.	B1. If no measurement units are used please state that clearly.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.	45. Please provide AVOIDANCE MITIGATION for this impact.	C. Please state the method of measurement used to determine the value for each criteria.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	46. Please provide the reverse of this impact as Mitigation.	C1. If no measurement units are used please state that clearly for each criteria.
24. Please state whether the MARGIN of ERROR is measured or assumed.	47. Please provide an ALTERNATIVE which avoids this impact.	C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.	48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.	D. Please state the existing or current baseline measurement (level) for each criteria.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.	-	E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.
27. Please state whether the MARGIN of ERROR is measured or assumed.	* 308 - LAND CLEARING AND SOIL COMPACTION LIMITED TO SMALLEST AREA POSSIBLE. The Document appears to have ignored this potentially feasible Mitigation. If you do not adopt this mitigation measure, please explain fully why it is not feasible. Please carefully analyze and disclose the potential benefits of Land Clearing and Soil Compaction Limited to Smallest Area Possible.	E1. If an average is used, please state which kind of average.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.	-	E2. Please state the extreme conditions which will be encountered.
29. Please list all potential CUMULATIVE impacts related to this one.	* 309 - CONSERVATION EASEMENTS TO PROTECT EXISTING VEGETATION AND UNDISTURBED AREAS. The Document appears to have ignored this potentially feasible Mitigation. If you do not adopt this mitigation measure, please explain fully	F. Please provide a graph of historical measurement.
30 Please describe all potential CUMULATIVE impacts related to this one.		G. Please state the measured, assumed or expected margin of error for each
31. Please quantify all potential CUMULATIVE impacts related to this one.		

measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

* 311 - INCREASED SOIL EROSION.

The Document appears to have ignored this potentially significant impact. Please carefully analyze and disclose the potential impacts of Increased Soil Erosion.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

"Bulldozing away a forest can increase soil erosion by 10 to 1,000 fold. The mud washed from a typical construction site can damage three miles of downstream waters with recovery taking up to a century." The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Increased Soil Erosion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 312 - STREAMBED EROSION.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Streambed Erosion.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Streambed Erosion.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 313 - STREAMBANK EROSION FROM SEWAGE DISCHARGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Streambank Erosion from Sewage Discharge.

If you claim the document contains proof of no-significant-impact for

this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Streambank Erosion from Sewage Discharge.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 314 - SOIL AGE.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Soil Age.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The soils in Monterey Peninsula's Jeffers Forest are estimated to be at least 750,000 years old and more likely one million years old.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Soil Age.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20a. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 315 - ECOSYSTEM AGE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Ecosystem Age.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

Ecosystems typically take tens of thousands of years to establish and stabilize. Some ecosystems can take millions of years to establish.
Considering the age of some tree species at 4,000 to 5,000 years, ten

thousand years is only two generations.

It can take 5000 years to produce five inches of topsoil.
-Audubon, Almanac of the Environment, 1994

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Ecosystem Age.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
40. Please state whether the margin of error is measured or assumed.
41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
43. Please name each EXPERT who prepared and reviewed this impact.
44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.
45. Please provide AVOIDANCE MITIGATION for this impact.
46. Please provide the reverse of this impact as Mitigation.
47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 316 - SCHOOLS.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Schools.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Noises and smells can distract from the purpose of schools.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance on
Schools.
- 1b. If no objective criteria are used please state that clearly.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 317 - LIBRARIES.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Libraries.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Noises and smells can distract from the purpose of libraries.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective

(non-subjective) CRITERIA used to determine the impact significance on Libraries.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 318 - IMMOBILE POPULATIONS.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Immobile Populations.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Immobile populations include schools, hospitals, convalescent homes, prisons, facilities for the mentally ill, dwellings where residents cannot leave the area without assistance from other people.

Noise, Hazardous Waste and Air Pollution can harm these populations who are helpless to get out of harm's way - let alone object.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Immobile Populations.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 319 - UNEDUCATED POPULATIONS.**

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Uneducated Populations.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Newspaper readership is declining since the 1950s. Project Censored of Sonoma State University documents how government and corporations intentionally fail to report harms to citizens. The book "Doublespeak" documents how government and corporations intentionally hide harms to citizens through use of euphemisms.

When the public does not understand the risks to themselves, they

do not know to protect themselves or to object to such activities.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Uneducated Populations.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 320 - PIPELINE.

The Document appears to have ignored this potentially significant impact.
Please carefully analyze and disclose the potential impacts of Pipeline.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

The US has some 2.2 million miles of pipelines carrying natural gas and other hazardous materials. AP June 17, 2000

This project will increase the mileage of natural gas lines in Pebble Beach.

ACCIDENTS - Fires & Explosions
Accidents are always a high risk. "An average of 22 people died annually from 1988 to 1998" from pipeline accidents. AP June 17,00

"Forty-two (42) people were killed by natural gas pipeline accidents between 1986 and June 30 (2000), according to statistics of the Office of Pipeline Safety, an agency of the National Transportation Safety Board." AP August, 22, 2000

"Gas pipeline blast kills 10 campers" AP Headline Aug 21, 2000
At Carlsbad NM near the banks of the Pecos river a pipeline 5 to 6 feet underground exploded leaving a crater some 20 feet deep, 86 feet long and 46 feet wide. The eleven (another man died a few days later) dead people, including five children, were sleeping some 200 feet from the pipeline.

In the early 1990's? in Louisiana 11 people were killed by an explosion caused by a natural gas pipeline leak. If such an explosion happened near GINS, it could harm or kill boaters, island visitors, and wildlife such as the endangered bald eagle.

"Federal Regulators sought a record fine of more than \$3 million against Olympic Pipeline Co. for numerous safety violations after two

10-year-old boys and an 18-year-old fisherman died after a pipeline operated by Olympic broke June 10, (1999) spewing 230,000 gallons of gasoline into a Bellingham park. The spilled gasoline ignited an enormous fireball that raced more than a mile down a creek." AP Jun 3, 2000

"Chemicals known to the state of California to cause cancer, birth defects, or other reproductive harm are found in and around facilities that produce, handle transport, store or sell crude oil and petroleum and chemical products. Facilities covered by this warning include pipeline systems..." Proposition 65 disclosure advertisement, May 2000, by Arco, Chevron, Texaco, Tosco and others.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Pipeline.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergistic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 321 - INTRINSIC VALUE.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Intrinsic Value.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Establishing value of environmental aspects merely in terms of use to humans such as economic value or even ecological roles is too narrow.

The very existence of a life form gives it the right to survive.

We do have aliens here on Earth, astounding unfamiliar life forms.
They're right in front of us in every forest, wetland and under the sea.

We have Zero evidence of any life anywhere else in the Universe. Most life forms we do know of took Billions of years and millions of generations to get to their present form.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Intrinsic Value.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows

whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 322 - ANIMAL BIOMASS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Animal Biomass.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Animal Biomass.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 30. Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergistic impacts.
 33. Please list, describe and quantify all Construction impacts related to this one.
 34. Please list, describe and quantify all Growth impacts related to this one.
 35. Please list, describe and quantify all Indirect impacts related to this one.
 36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
 37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
 38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.
 39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.
 40. Please state whether the margin of error is measured or assumed.
 41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.
 42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.
 43. Please name each EXPERT who prepared and reviewed this impact.

47. Please provide an ALTERNATIVE which avoids this impact.
48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.
-
- * 324 - LIVING BIOMASS LOSS - TREE CUTTING WITHOUT REMOVAL.
- The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Living Biomass Loss - Tree Cutting Without Removal.
- If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.
- Utility Corporations often cut trees without removing them from their
native location. While such activity is not a local physical biomass
loss, killing the trees is a loss of living biomass.
- QUANTIFICATION OF BASELINES AND IMPACTS:
- This impact appears to be potentially significant.
- 1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Living Biomass Loss - Tree Cutting Without Removal.
- 1b. If no objective criteria are used please state that clearly.
2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.
- 3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

- 5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.
6. Please quantify the existing or current BASELINE measurement (level) for each criteria.
7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.
8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.
9. Please state the variance's MARGINS of ERROR or confidence level.
10. Please state whether this MARGIN of ERROR is measured or assumed.
11. If an average is used, please state which kind of average.
12. Please state the most extreme values which could be encountered.
13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
15. Please provide a graph of HISTORICAL measurements.
16. Please quantify the length of time this impact would last.
17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
- 20s. Please state whether this MARGIN of ERROR is measured or assumed.
- 20b. If no margin of error is used please state that clearly.
21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
24. Please state whether the MARGIN of ERROR is measured or assumed.
25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
27. Please state whether the MARGIN of ERROR is measured or assumed.
28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
29. Please list all potential CUMULATIVE impacts related to this one.
- 30 Please describe all potential CUMULATIVE impacts related to this one.
31. Please quantify all potential CUMULATIVE impacts related to this one.
32. Please list, describe and quantify all potential compound and synergetic impacts.
33. Please list, describe and quantify all Construction impacts related to this one.
34. Please list, describe and quantify all Growth impacts related to this one.
35. Please list, describe and quantify all Indirect impacts related to this one.
36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.
37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.
38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 325 - FOREST BIOMASS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Forest Biomass.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

While a typical old growth forest biomass is some 400 tons per acre, an
old growth redwood forest can easily have a biomass of 1800 tons per
acre. A rainforest typically contains some 180 tons of biomass per acre.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective
(non-subjective) CRITERIA used to determine the impact significance of
Forest Biomass.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 326 - SOIL BIOMASS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the potential impacts of Soil Biomass.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Each acre of soil can contain some two tons of microorganisms including Molds (2000 pounds), Bacteria (1000 pounds), Actinomycetes (1000 pounds), Protozoa (200 pounds), Algae (100 pounds), Yeasts (100 pounds) and Viruses. Other forms of life in soil include plant roots, earthworms, mites and insects. Encyclopedia of Biological Sciences, Gray, 1961 McGraw-Hill

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Soil Biomass.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 327 - WILD-LIFE HABITAT LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Wild-Life Habitat Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

"Most wildlife populations extinguished by humans were eliminated by accident, often in spite of vigorous attempts to avert the extinction. In contrast most premeditated attempts to destroy a population have been unsuccessful. The paradox is less puzzling when it is realized that unplanned exterminations are usually caused by a change in the animal's habitat, whereas the planned attempts are usually aimed at the animals themselves. The message is clear: populations are more vulnerable to a manipulation of their habitat than they are to the direct manipulation of their numbers. An environment change tends to affect one or more of the habitat components (food, cover, water and space); and, when this change is deleterious, the population cannot necessarily adjust to it by lowering density..." Caughtley 1978, Analysis of vertebrate populations, p 200 John Wiley & Sons cited by California Department of Fish and Game "Furbearing and Nongame Mammal Trapping" ED, April 6, 2001

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Wild-Life Habitat Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 328 - WILD-LAND HABITAT LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Wild-Land Habitat Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Wild-Land Habitat Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.
 12. Please state the most extreme values which could be encountered.
 13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.
 14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.
 15. Please provide a graph of HISTORICAL measurements.
 16. Please quantify the length of time this impact would last.
 17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.
 18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.
 19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.
 - 20s. Please state whether this MARGIN of ERROR is measured or assumed.
 - 20b. If no margin of error is used please state that clearly.
 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.
 23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 24. Please state whether the MARGIN of ERROR is measured or assumed.
 25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.
 26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.
 27. Please state whether the MARGIN of ERROR is measured or assumed.
 28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.
 29. Please list all potential CUMULATIVE impacts related to this one.
 - 30 Please describe all potential CUMULATIVE impacts related to this one.
 31. Please quantify all potential CUMULATIVE impacts related to this one.
 32. Please list, describe and quantify all potential compound and synergetic impacts.

 21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.
 22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 330 - ECOTONES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of Ecotones.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

An ecotone is the area between two dramatically different ecosystems. It is marked by a greater number of species and higher population densities. It often contains species which do not exist in either adjoining ecosystem.

A marsh or a wetland is an ecotone between the open water of a lake and the land. Another ecotone is the margin between a forest and a meadow.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Ecotones.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 331 - TREE CANOPY FOG CAPTURE LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Tree Canopy Fog Capture Loss.

If you claim the document contains proof of no-significant-impact for
this impact please explicitly state the page number and paragraph.

Fog drip provides as much as 45 percent of a redwood's annual water use.
Some understory plants depend completely on fog drip. In a 3 year study, in an intact redwood forest 34 percent of the hydrologic input per year came from fog drip. After logging the fog drip contribution dropped to 17 percent. Oecologica, January 1999, Todd Dawson, Cornell University

"Studies in northern California have found that fog drip can add as much as 26 cm of precipitation to the annual total in redwood forests."

Big Sur Natural History, Henson & Usner, 1993

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on
Tree Canopy Fog Capture Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

*** 332 - RAINFALL LOSS DUE TO ECOSYSTEM REMOVAL.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the potential impacts of
Rainfall Loss Due to Ecosystem Removal.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

A 1994 New Yorker article described a scientific study of how a whole watershed RECEIVED less rainfall after it was clearcut.

This is a different impact than increased runoff and different from tree fog drip.

Fog-Drip is just a tree condensing fog to the ground, rain gathering is the synergetic collection of water from the atmosphere to the forest.

It is the synergetic system capability of a forest ecosystem to gather rain from passing weather systems mainly by cooling a large area using evapotranspiration and shade.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance of Rainfall Loss Due to Ecosystem Removal.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

*** 333 - ENVIRONMENTALLY SENSITIVE HABITAT AREA LOSS.**

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Environmentally Sensitive Habitat Area Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Environmentally Sensitive Habitat Areas (ESHA) defined by the California Coastal Act includes -

all endangered species habitat,
all coastal wetlands,
all coastal lagoons,
all marine life haul-out,
breeding and nesting areas,
wildlife reserves,
all tideland portions of the California Sea Otter Refuge,
nearshore reefs,
tidepools,
sea caves,
kelp beds,
islets and offshore rocks,
wilderness and primitive areas.
(source - Big Sur Local Coastal Plan)

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Environmentally Sensitive Habitat Area Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30. Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 334 - ENVIRONMENTALLY SENSITIVE HABITAT AREA LOSS HABITAT.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Environmentally Sensitive Habitat Area Loss Habitat.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Environmentally Sensitive Habitat Area Loss Habitat.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 335 - HABITAT PROTECTION.

The Document appears to have ignored this potentially feasible Alternative.

Please carefully analyze and disclose the potential benefits of
Habitat Protection.

"Habitat destruction is the leading cause of species extinction."
-Nature, 24 Feb 2000 p 843

"Conservation Biology's central tenets are not hard to grasp. For a natural habitat to be viable (and for a conservation strategy to succeed) there is a handful of general rules: bigger is better; a single large habitat is usually better than several small, isolated ones; large native carnivores are better than none; intact habitat is preferable to artificially disturbed habitat; and connected habitats are usually better than fragmented ones." Sierra Magazine Sept/Oct 1995 p 97

"Estivation habitat is essential for the survival of California red-legged frogs within a watershed."

Genuine habitat protection prohibits any adverse modification. It also requires overwhelming proof that any proposed "non-adverse" modification would not have other adverse habitat impacts.

ALTERNATIVE FACTUAL ANALYSIS

There is little or no factual evidence in the document showing why this alternative is infeasible.

A. Please clearly identify by name and describe each of the objective (non-subjective) criteria used to determine this Alternative's benefits.

A1. If no objective criteria are used please state that clearly.

A2. If the criteria are different than those used to evaluate the benefits of the proposed project, please explain as it is not generally acceptable to compare apples and oranges.

B. Please state the name of the measurement units (numbers) used to determine the value for Each criteria.

B1. If no measurement units are used please state that clearly.

C. Please state the method of measurement used to determine the value for each criteria.

C1. If no measurement units are used please state that clearly for each criteria.

C2. If no objective criteria are used please clearly describe how the method of measuring value is scientifically credible and defensible.

D. Please state the existing or current baseline measurement (level) for each criteria.

E. Please state the normal variance or fluctuation, assumed or expected for each of the criteria listed above.

E1. If an average is used, please state which kind of average.

E2. Please state the extreme conditions which will be encountered.

F. Please provide a graph of historical measurement.

G. Please state the measured, assumed or expected margin of error for each measurement, calculation, and conclusion and whether it is measured or assumed.

H. Please state the total maximum change, in Percent, to which the Alternative would raise or lower the baseline number.

H1. Please state whether this total maximum change percent is an average amount, a worst case expected or a best case expected.

H2. Please state the degree, in Absolute Amount, to which this Alternative would raise or lower the baseline number;

H3. Please state whether this total maximum change amount is an average amount, a best case expected or other.

I. Please state the threshold number at which the value changes from a significant impact to a less-than-significant impact and the clear rationale for that number.

I1. Please provide the margin of error used (in percent and absolute amount) to insure the Significance Threshold Level for this Alternative is not somehow exceeded.

I2. If no margin of error is used please state that clearly.

J. ALTERNATIVE VALUE PROOF

Please cite and provide relevant studies that clearly show that the project purposes could not be achieved with this alternative or with this alternative in combination with other alternatives.

J1. Please discuss the limitations of those studies.

BENEFIT DURATION

K. Please clearly describe how the benefits vary over the time during the studies.

K1. Please graph the benefits for this alternative versus time in the studies. It is important to know the duration of an Alternative's benefits compared with the benefits from the proposed project.

COSTS

L. Please cite the costs for the Alternatives studied.

L1. It is important to know the cost to benefit ratio, please explain that ratio.

M. EXPERT QUALIFICATIONS

Please name each expert who prepared and reviewed this Alternative analysis.

M1. Please cite each expert's training, competence and experience specific to this Alternative analysis.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Wetland Loss.

If you claim the document contains proof of no-significant impact for this impact please explicitly state the page number and paragraph.

California has lost about 91 percent of the state's total wetlands. Five (5) million acres reduced to only 450,000 acres. California Dept. of Parks and Recreation 1988. The loss of this much habitat means that wildlife is under extreme pressure. Sierra Club / CALPirg Report "Our 21 Most Endangered Habitats, 1997)

The US EPA cites land development as the leading cause of recent wetland losses and accounts for 12% of the nation's degraded waters. - The Cumulative Effects of Land Development on Streams, Rivers, Lakes, Tidal Waters & Wetlands, by Richard Klein 1979

Wetlands are more broadly defined by the California Coastal Act than by the Clean Water Act (404 permits). Coastal Commission letter to Cal-Trans Dec 21 1998 (e.g. the Coastal Act includes seasonal wetlands while the federal definition only recognizes year round wetlands).

Please specify which wetland definition is being used.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Wetland Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

* 336 - WETLAND LOSS.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 337 - WETLAND ECOSYSTEM SERVICE LOSSES.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on
Wetland Ecosystem Service Losses.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Wetlands provide approx \$14,785 in Ecosystem services per hectare per year. -"The value of the worlds ecosystem services and natural capital" by Costanza et al, Nature 15 may 1997 pg 253

"A 1981 study estimated that for each hectare of US Wetlands destroyed by development, the lost ability to soak up floodwaters increased annual flood damages by \$3300 to \$11,000." Wade Roush, Science May 16 1997 pg 1029

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Wetland Ecosystem Service Losses.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 338 - WATERS OF THE U.S. LOSS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Waters of the U.S. Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

33 CFR 328 defines Waters of the US as including navigable waterways, their tributaries (including intermittent streams), and wetlands.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Waters of the U.S. Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

-

* 339 - LAKE/RIVERS ECOSYSTEM SERVICES LOSS.

The Document appears to have ignored this potentially significant Impact.

Please carefully analyze and disclose the project's potential impacts on Lake/Rivers Ecosystem Services Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

Lakes/rivers provide approx \$8,000 in Ecosystem services per hectare per

year. "The value of the worlds ecosystem services and natural capital" by Costanza et al, Nature 15 may 1997 pg 256 Those services include: Species protection (think of what it costs to keep an endangered animal alive in a zoo, compared to a native habitat), storm protection, flood control, drought recovery and other aspects of habitat response to environmental variability mainly controlled by vegetation structure, prevention of loss of soil by wind, runoff or other removal processes, soil formation, nutrient cycling, waste treatment, pollution control, detoxification, atmospheric gas regulation, climate regulation, pollination, dynamic regulation of populations, reduction of herbivory by top predators, habitat for resident and transient populations, food, lumber, fuel and fodder production; medicine products, genes for disease resistance, ornamental species, eco-tourism, sport fishing, and other outdoor activities, aesthetic, artistic, educational, spiritual and scientific values.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Lake/Rivers Ecosystem Services Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.

4. If no measurement units are used please state that clearly.

5a. Please state the METHOD of measurement used to determine the significance for each criteria.

5b. If no method of measurement was used please state that clearly for each criteria and explain thoroughly how the data was obtained.

6. Please quantify the existing or current BASELINE measurement (level) for each criteria.

7. Please state its MARGIN of ERROR or a confidence level and whether the MARGIN of ERROR is measured or assumed.

8. Please state the VARIANCE or fluctuation, assumed or expected for each of the criteria listed above.

9. Please state the variance's MARGINS of ERROR or confidence level.

10. Please state whether this MARGIN of ERROR is measured or assumed.

11. If an average is used, please state which kind of average.

12. Please state the most extreme values which could be encountered.

13. Please describe and quantify which criteria and ASSUMPTIONS the Impact Significance predictions are most SENSITIVE.

14. Please analyze and quantify how sensitive those predictions are to reasonably foreseeable varying criteria and assumptions.

15. Please provide a graph of HISTORICAL measurements.

16. Please quantify the length of time this impact would last.

17. Please quantify how this impact would vary over that time period. Please use a graph for clarity.

18. Please state the THRESHOLD number at which the impact changes from significant to less-than-significant and the clear criteria and rationale for that number.

19. Please provide the MARGIN of ERROR used (in percent and absolute amount) for measuring the Significance THRESHOLD Level.

20s. Please state whether this MARGIN of ERROR is measured or assumed.

20b. If no margin of error is used please state that clearly.

21. Please disclose all threshold numbers at which the impact changes from LEGAL to ILLEGAL for ALL related and potentially relevant local, state and federal laws.

22. Some Impacts increase in a LINEAR RELATIONSHIP with increasing input, other impacts have complex non-linear relationships. Please provide a graph that shows whether the relationship is linear or otherwise - when at and near the significance threshold values.

23. Please quantify the total PERCENT MAXIMUM CHANGE, to which the IMPACT could raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

24. Please state whether the MARGIN of ERROR is measured or assumed.

25. Please state whether this total PERCENT maximum change is an AVERAGE amount, a worst case expected or a best case expected.

26. Please quantify the ABSOLUTE MAXIMUM AMOUNT, to which the impact would raise or lower the baseline number and its MARGIN of ERROR or confidence levels.

27. Please state whether the MARGIN of ERROR is measured or assumed.

28. Please state whether this total maximum change amount is an AVERAGE amount, a worst case expected or a best case expected.

29. Please list all potential CUMULATIVE impacts related to this one.

30 Please describe all potential CUMULATIVE impacts related to this one.

31. Please quantify all potential CUMULATIVE impacts related to this one.

32. Please list, describe and quantify all potential compound and synergetic impacts.

33. Please list, describe and quantify all Construction impacts related to this one.

34. Please list, describe and quantify all Growth impacts related to this one.

35. Please list, describe and quantify all Indirect impacts related to this one.

36. Please list and quantify every OTHER IMPACT - this impact or mitigation could increase.

37. Please describe the EXISTING USABLE limit of the RESOURCE this impact affects.

38. Please state the METHOD of measurement used to determine the limit of the RESOURCE this impact affects.

39. Please describe the MARGIN of ERROR or confidence level used to measure how much of this resource is left.

40. Please state whether the margin of error is measured or assumed.

41. Please quantify what is the maximum amount (in AMOUNT of existing) of this resource that can be lost and still be restored.

42. Please quantify what is the MAXIMUM amount (in PERCENTAGE of existing) of this resource that can be LOST and still be restored.

43. Please name each EXPERT who prepared and reviewed this impact.

44. Please cite each expert's training, and peer reviewed, validly published articles specific to this impact.

45. Please provide AVOIDANCE MITIGATION for this impact.

46. Please provide the reverse of this impact as Mitigation.

47. Please provide an ALTERNATIVE which avoids this impact.

48. Please list all other studies initiated by the applicant related to this impact, including subject matter breadth, author's names and dates and where they can be examined.

* 340 - PESCADERO CANYON WATERSHED LOSS.

The Document appears to have ignored this potentially significant Impact.
Please carefully analyze and disclose the project's potential impacts on Pescadero Canyon Watershed Loss.

If you claim the document contains proof of no-significant-impact for this impact please explicitly state the page number and paragraph.

QUANTIFICATION OF BASELINES AND IMPACTS:

This impact appears to be potentially significant.

1a. Please clearly identify by NAME and describe each of the objective (non-subjective) CRITERIA used to determine the impact significance on Pescadero Canyon Watershed Loss.

1b. If no objective criteria are used please state that clearly.

2. If no objective criteria are used please clearly describe how the threshold of significance chosen is scientifically testable, repeatable, falsifiable, credible and defensible.

3a. Please state the NAME of the MEASUREMENT UNITS (numbers) used to determine the significance for EACH criteria.

3b. Please quote the definition used.
