

MONTEREY COUNTY PLANNING COMMISSION

Meeting: February 11, 2009 Time: 9:00 P.M	Agenda Item No.:
Project Description: Combined Development Permit including: (1) a General Development Plan, associated with: (a) Industrial Commercial Uses except for auto repair, and (b) inclusion of tradesmen's shops and other light commercial uses. The General Plan is for two buildings, providing a total of 37,680 square feet; (Building A: 21,280 Square Feet; Building B: 16,640 Square Feet). Grading is approximately 132 cubic yards cut and 6,890 cubic yards fill, on a 2.23 acre site.	
Project Location: 2 Spreckels Lane, Salinas	APN: 207-053-006-000
Planning File Number: PLN070391	Name: Steve Wayne Shook Tr Et Al, Property Owner/Agent
Plan Area: Greater Salinas Plan Area	Flagged and staked: Yes
Zoning Designation: : HC [Heavy Commercial]	
CEQA Action: Mitigated Negative Declaration	
Department: RMA - Planning Department	

This project was heard by the Planning Commission on January 14, 2009 and continued to January 28, 2009, and was subsequently further continued to March 11, 2009, to ensure revisions to the General Development Plan and conditions of approval and to provide for responses to the Planning Commissioner's questions regarding the project. These questions are as follows:

- a. Include condition regarding removal of existing well - *see Environmental Health Condition of Approval No. 21.*
- b. Include language addressing water pipeline – *Addressed in Site Preparation section.*
- c. Limitations of water uses should be addressed by outcomes rather than uses – *The applicant has identified the available sewage flow to be 15 gallons per day per unit.*
- d. Requiring that the Commission disallow uses by amending the General Development Plan is questionable – *The concern is noted. See revisions to MM5, and the attached General Development Plan revision, which also include Hazardous Materials requirements.*
- e. Limiting uses is an issue – should it be done by number of toilets? The outcome rather than the uses should be the standard. *As noted above, the applicant has identified available sewage flow to be 15 gallons per day per unit.*
- f. Lighting conditions are redundant. *Lighting conditions are now part of the General Development Plan and MM5.*
- g. Regarding floodplain – how can the drainage plan be achieved with a floodplain? *The drainage plan still provides for general drainage into the floodway; please note the drainage shown on the attached drainage plan.*
- h. Where is the drainage plan? The Commissioners requested that it be more clearly drawn to identify the proposed drainage. *The drainage plan is attached and is also shown within the body of this document for reference purposes.*

- i. What is the expected height of flooding within this area? How is the structure to be secured above this level? *Commercial structural height limits within a 100 year flood plain are required by the US Army Corps of Engineers standards to be a minimum of 49 feet above mean sea level plus one foot. The structures are to be built at an elevation of 50 feet above mean sea level, in conformance with USACE requirements and definitions of developable sites.*
- j. Regarding MM2 - #25 – worker sensitivity – is this on-going? *Note that MM2 is now no longer numbered. In addition, MM2a provides for an ongoing method of confirming that tenants have been informed about animal protection measures.*

RECOMMENDATION:

Staff recommends that the Planning Commission:

- (1) Adopt the Mitigated Negative Declaration and Mitigation Monitoring Reporting Plan in **Exhibit D**;
- (2) Approve the Combined Development Permit based on Findings and Evidence in **Exhibit C** and subject to conditions of approval in **Exhibit D**.

PROJECT SUMMARY:

The project is a two single story tilt-up multi-tenant commercial/industrial buildings totalling 37,680 square feet of space on a 2.23 acre site. The project requires approvals of a General Development Plan. More detail is provided below and in the attached (Exhibit B).

GENERAL DEVELOPMENT PLAN

PLN070391's proposed General Development Plan provides for the construction of two (2) one-story concrete tilt-up industrial buildings (Building A: 21,280 square feet; Building B: 16,640 square feet), providing a total of 21 independent commercial/industrial units, drive aisles, and 75 required parking spaces; allowed Industrial and Commercial Uses, and provides for the inclusion of Tradesmen's Shops and other Light Commercial Uses; and a Demolition Permit for the removal of 12 residential units, associated hardscape, and grading (approximately 132 cubic yards of cut and 6,890 cubic yards of fill) on a 2.23 acre site.

Although based on generalized uses allowed within the Heavy Commercial zone, the General Development Plan proposes to allow certain uses onsite and not to allow other uses which could result in disposal of hazardous materials, such as auto repair.

OTHER AGENCY INVOLVEMENT:

- ✓ Salinas Rural Fire Protection District
- ✓ California Department of Transportation, District 5
- ✓ Public Works Department
- ✓ Parks Department
- ✓ Environmental Health Division
- ✓ Water Resources Agency
- ✓ Regional Water Quality Control Board

The above checked agencies and departments have reviewed this project. Conditions recommended by the RMA Planning Department, Salinas Rural Fire Department, Water Resources Agency, Environmental Health and Public Works Department have been incorporated into the condition compliance reporting plan (**Exhibit D**).

The project site is located at the boundary of Spreckels land use area, and, as an industrial project replacing an existing residential use, was submitted as a courtesy to the Spreckels Design Review Committee for their review and comment on November 28, 2007.

EXHIBIT B

PROJECT DISCUSSION

BACKGROUND

The proposed site currently is developed with twelve (12) residential structures, ten of which are relocated portions of barracks originally located at Fort Ord, and one of which is a storage building; these were moved to the project site by 1947 and are now abandoned, non-conforming structures, having been vacant for more than a year. Demolition of these structures is therefore allowed; however, they are clad in asbestos siding, which needs to be removed in accordance with hazardous materials removal requirements. The twelfth residential structure, more recently built, will also be demolished to provide for the proposed project.

This property has two existing wells; one is near the driveway entrance and the other toward the rear of the property. The well at the rear of the property must be abandoned as it has poor quality and is not in use. The Environmental Health Division (EHD) approved this project based on the existing well at the front of the property. If the applicant drills a new well to meet fire standards the well must first have a source capacity test and meet quality standards prior to utilizing the well for domestic use. If that is proven the new well can be utilized and the old (existing) well must be properly destroyed. There are no well permit or source capacity conditions on this project because EHD is not requiring that a new well be installed.

A portion of Old Salinas-Monterey Highway 117, which runs parallel to the existing SR-68, is also required to be processed as an abandonment of a public right of way, to provide for project development. This action has been requested, as noted on Plan Sheet PC-1.

Although easements are required across the project site for utilities and public agency access, no easement requirements within the Spreckels Lane right-of-way are associated with the project; as a condition of approval, Public Works requires an encroachment permit for site access from the Spreckels Lane cul-de-sac.

CREDIT: GOOGLE EARTH

The project site is located within a 100-year floodplain, and has been subject to flooding, along with a large portion of the southerly properties, located on the Salinas River, over the area's historic life. Proposed development is required to conform to U.S. Army Corps of Engineers standards for commercial development within a 100 year floodplain. The project will conform to those requirements under the General Development Plan and Site Plan.

PROJECT PROPOSAL

The project will replace twelve (12) non-conforming structures currently on the project site with two one-story industrial-style buildings and required commercial/industrial parking. The General Development Plan has been designed to allow flexibility for renting these spaces. Prior to development, the closure of wells located onsite as well as the removal of a 100 gallon and 1500 gallon septic tank is required.

The project site is located outside of the Spreckels sphere of influence, but was submitted to the Spreckels LUAC on December 6, 2007 for their review. Because the site was not within the Spreckels LUAC, no vote on the project was taken; however, comments were favorable for the development of the proposed commercial/industrial buildings. Staff has discussed design improvements with the architect and was provided on September 20, 2008, with renderings showing the design to be enhanced by providing a two-toned color palette. There is minor scoring and texturing which will be included in the façade through the texturing of the form used to pour these tilt-up panels.

The project site is adjacent to SR-68, a designated scenic highway. It will be possible to briefly view Building B, the nearest proposed structure to SR-68, through existing trees. As noted, structures are to be painted in varying shades of green to blend with surrounding trees. Viewsheds from other portions of SR-68 are obscured by mature trees on adjacent properties.

A biological report was prepared for the project site (Vern Yadon, July 14, 2006) and no statute protected threatened or endangered plants or animals were found on the property, nor were any listed plants found on the property requiring CEQA review. Measures have been included in the conditions of approval to ensure any found habitat or species will be preserved.

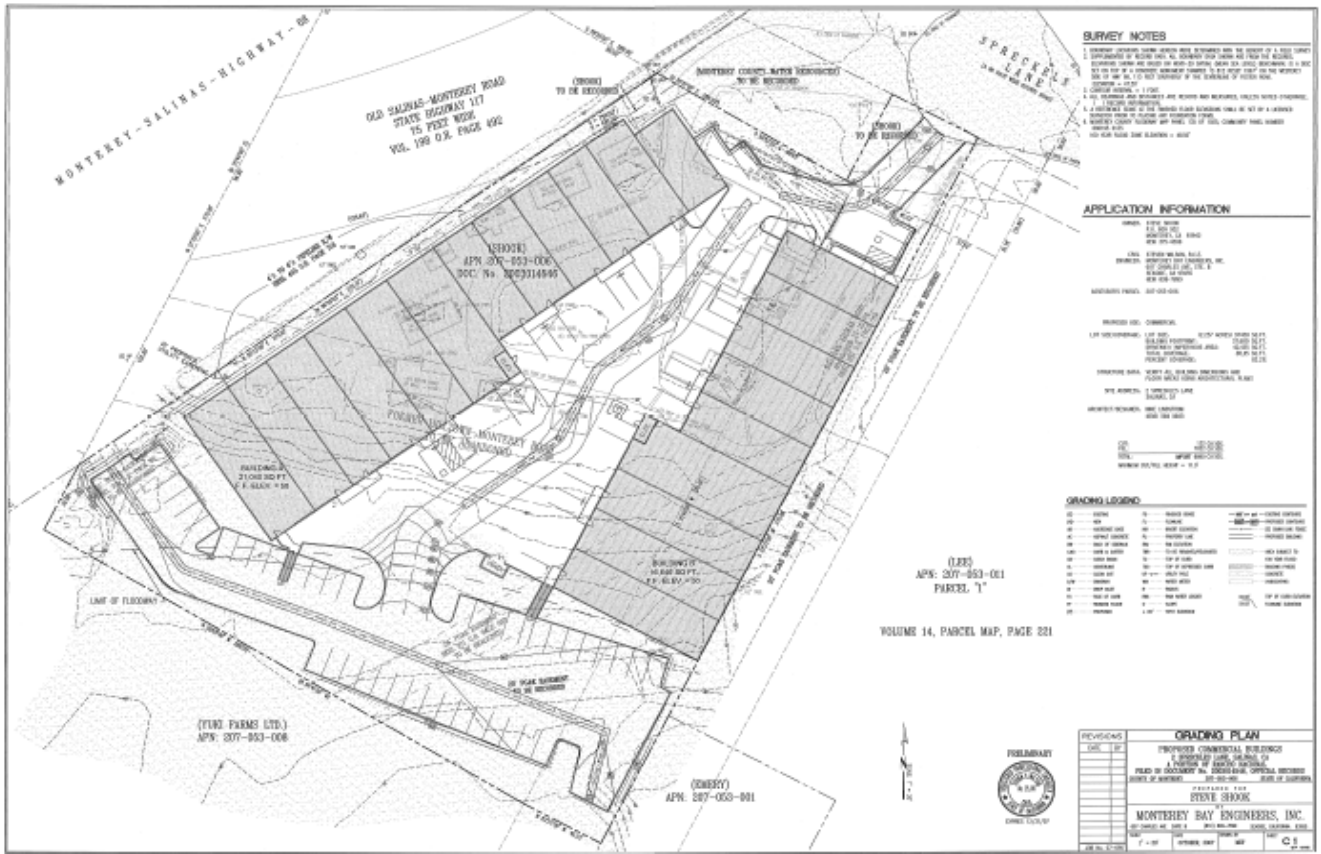

An existing well on the site has provided water for the residential units, however, in order to provide required fireflow and to place the well uphill and out of the area of the proposed structures, a larger replacement well is to be installed at the front of the property.

Shook Commercial Industrial Building - PLN070391

EXISTING STRUCTURES VIEWED FROM SR68 : NOTE THAT APPROXIMATE HEIGHT OF VIEW IS AT APPROXIMATELY 48 FEET ABOVE THE ROAD LEVEL.

CREDIT: GOOGLE EARTH

SITE PLAN

100-Year Flood Plain impacts to structures have been addressed according to the requirements of the US Army Corps of Engineers by requiring that the proposed structures be built at an elevation of 50 feet above mean sea level, as shown on the site plans and addressed by the General Development Plan in its discussion of site fill requirements.

REGULATORY CONTEXT

PLN070391 was originally submitted as a Combined Use Permit, including Use Permits identified below and the General Development Plan. In accordance with project requirements, the use permits described below are associated with the General Development Plan and are subcategories of that plan. For convenience, the references submitted on the original application are included in this description to ensure identification of the project is not lost with coverage of the project under the umbrella provision of a General Development Plan.

GENERAL DEVELOPMENT PLAN

As noted in the project summary, Buildings “A” and “B” are tilt-up buildings, supported by concrete pads and requiring minimal construction time. Structures are to be a two single story structures, with nine units in Building “A” and 12 units in Building “B”. The structural heights of these buildings provides a maximum height of 23 feet above finish floor level, which is lower than the maximum allowed structure height of 35 feet.

PURPOSE

The proposed development is to provide commercial/industrial compliance building space for tenant use. These uses are not specifically identified within the General Development Plan but are characterized as being speculative in nature. The proposed structures provide small storage, manufacturing, light industrial and/or commercial/retail space which will serve either those businesses which were originally small enough to be cottage industries but have outgrown residential use allowances because they require staffing, storage, display and public access due to their growth or, as conceived, require formal retail and/or small office, industrial or crafting space but are still too small for larger commercial spaces. Two car parking spaces are provided for each unit, in addition to extra onsite parking. Due to limitations of sewage processing capacity and the proximity of the site to the Salinas River, some uses are limited on the project site. Any uses which would require the washing of goods, equipment, water in the processing of goods, or for human habitation have been identified as uses which are not allowed or strictly limited on the project site.

The following uses are allowed uses or allowed with an administrative or use permit in the Heavy Commercial Zone:

<p>Allowed Uses: Water system facilities including wells and storage tanks serving four or fewer service connections Cultivation, cutting or removal of Christmas trees</p> <p>Uses Allowed by Administrative Permit: Offices less than 5,000 square feet in floor area Auto repair facilities Service stations Shops for tradesmen such as plumbers, electricians, furniture makers and repairmen, appliance repairmen and similar uses Caretaker unit for onsite security Mini-warehouse storage facilities less than 5,000 square feet in floor area Small water system facilities including wells and storage tanks for 5 to 14 service connections Accessory structures and accessory uses to permitted uses which do not intensify the permitted use Photography studio Picture framing business Shoe shop Shoe store Shops of a light commercial character and conducted within a structure Stationery and office supply store Clothing manufacturer</p>	<p>Automobile and truck tow and storage operations Boat and auto sales Agricultural processing plants Furniture manufacturing, finished paper products from paper stock All residential uses provided that the gross square footage of the residential use does not exceed the gross square footage of the commercial use Trucking operations, including offices and facilities for the repair, servicing, fueling, storage, and dispatching commercial trucks Hotels, motels, restaurants and similar visitor facilities Contractors yards and offices Chemical laboratories, electronic products and instrument manufacturing Research laboratories Warehouses for the collection, packaging and distribution of agricultural and horticultural products Day care centers The exploration for and the removal of oil and gas Other uses similar in character, density and intensity Expansion of legal nonconforming uses Changes of legal nonconforming uses to similar uses Zoological gardens for wild animals</p>
--	---

<p>Day care center for on-site employees and employees on the same lot or subdivision</p> <p>Boarding kennels</p> <p>Additions to existing approved wireless communications facilities</p> <p>Uses Allowed by Use Permit:</p> <p>Office complexes greater than 5,000 square feet in area</p> <p>Automobile and recreational vehicle storage yards</p> <p>Contractor's equipment storage facility</p> <p>Retail sales which are accessory and incidental to the uses permitted</p> <p>Bag cleaning or rag works</p> <p>Water well drilling business</p> <p>Public utility uses and accessory structures, including corporation yards or similar uses</p> <p>Wholesale distributors of petroleum products, contractor yards, welding shops and other similar uses</p>	<p>Public and quasi-public uses including churches, parks, playgrounds, schools, public safety facilities, etc.</p> <p>Ridgeline development</p> <p>Lumber yards</p> <p>Bottling works</p> <p>Wholesale stores and storage</p> <p>Storage garages</p> <p>Service Centers</p> <p>Open air retail and wholesale sales</p>
--	---

Wastewater processing on site is limited because of the height of the water table and the proximity of the Salinas River downslope. The onsite sewage treatment is designed to process a wastewater flow of less than 630 gallons per day. Therefore, project uses have been restricted to those uses which are low in consumption in water. The following uses are prohibited or limited uses are included in the revised General Development Plan as identified in Condition 3:

<ul style="list-style-type: none"> ▪ Barber shop; ▪ Beauty shop; ▪ Convenience market; ▪ Photo studio (Digital only okay); ▪ Forist, ▪ Small water systems; ▪ Pet shop; ▪ Any food facility. <p>The following uses require further environmental review and Hazardous Materials Permits, subject to the Environmental Health Division approval. If it is the intent of a tenant to conduct one of these uses, an amendment to this General Development Plan is required:</p>	<ul style="list-style-type: none"> ▪ Service stations; ▪ Wholesale distributors of petroleum products, contractor yards, welding shops and other similar uses; ▪ Additions to existing approved wireless communications facilities; ▪ The exploration for and the removal of oil and gas; ▪ Wholesale and retail establishments distributing materials and products essential to agriculture and farming operations, except manure; ▪ Propane distributorship and sales and service, ▪ Wholesale distributors of petroleum; ▪ Wireless communications facilities, per Section 21.64.310.
--	--

The applicant is required by the Conditions of Approval to submit a revised General Development Plan which identifies the above uses as the only ones allowed on the site. No other uses are allowed by the revised General Development Plan unless the Plan is formally revised and revisions approved in accordance with County requirements.

SITE PREPARATION

The following is required prior to construction:

- Demolition of the 12 residential structures onsite
- Development of a new well to be located adjacent to the cul-de-sac from Spreckels Lane.
- Closure of the existing 8 inch well interior to the site.
- Install water lines to service all 21 rental areas, the irrigation system and any required standpipes for fireflow service.
- Provision of utility rights-of-way across the property.
- Development of a septic system and leachfield.
- Grading of the site, including cut and fill within the area of the two new structures to bring the level of the buildings to the required 50 feet above mean sea level (49 feet required + 1 foot).
- Construction of a stormwater drainage system.
- Complete easement process for utilities and water district access to the project site.

Abandonment of Highway 71 noted as a requirement of site preparation in staff reports submitted for hearing on January 14 and 28 has been completed and is not included in this staff report as a requirement.

USES

In order to address these issues appropriately, a revised General Development Plan will be required as a Condition of Project Approval, including a list of allowed uses as follows:

<ul style="list-style-type: none">▪ Uses resulting in 30 gallons per day of wastewater (or less) per tenant space, including: Service centers (no auto repair); Mini-warehouse storage facilities less than 5,000 sq. ft. in floor area; Photography studio (digital only);▪ Picture framing business;▪ Shoe shop;▪ Shoe store;▪ Shops of a light commercial character and conducted within a structure;▪ Stationery and office supply store;▪ Contractor's equipment storage facility;▪ Retail sales which are accessory and incidental to the uses permitted;▪ Water well drilling business;▪ Book Stores, Clothing Stores, Gift Shops, Stationary Stores,▪ Offices or Banks,▪ Locksmith;▪ Hardware (no lumber or outside storage), Picture Framing;▪ Accessory structures;▪ Repair Stores (Excluding Auto, Truck and	<ul style="list-style-type: none">▪ Automobile and recreational vehicle storage yards;▪ Automobile, truck towing and storage operations;▪ Welding, metal fabricating, or repair for heavy equipment;▪ Trucking operations, including offices, repair, servicing, fueling, storage and dispatching commercial trucks;▪ Warehouses, electronic products and instrument manufacturing;▪ Service centers.▪ Boat and auto sales (no onsite repair or washing);▪ Contractors yards and offices;▪ Other uses similar in character, density and intensity;▪ Removal of minerals and natural materials for commercial purposes;▪ Wholesale and retail establishments;▪ Lumber yards;▪ Storage garages;▪ Service Centers.
---	--

Equipment), ▪ Convenience Food Stores or Specialty Food Stores; ▪ Auto Repair Facilities	
--	--

GENERAL DEVELOPMENT PLAN

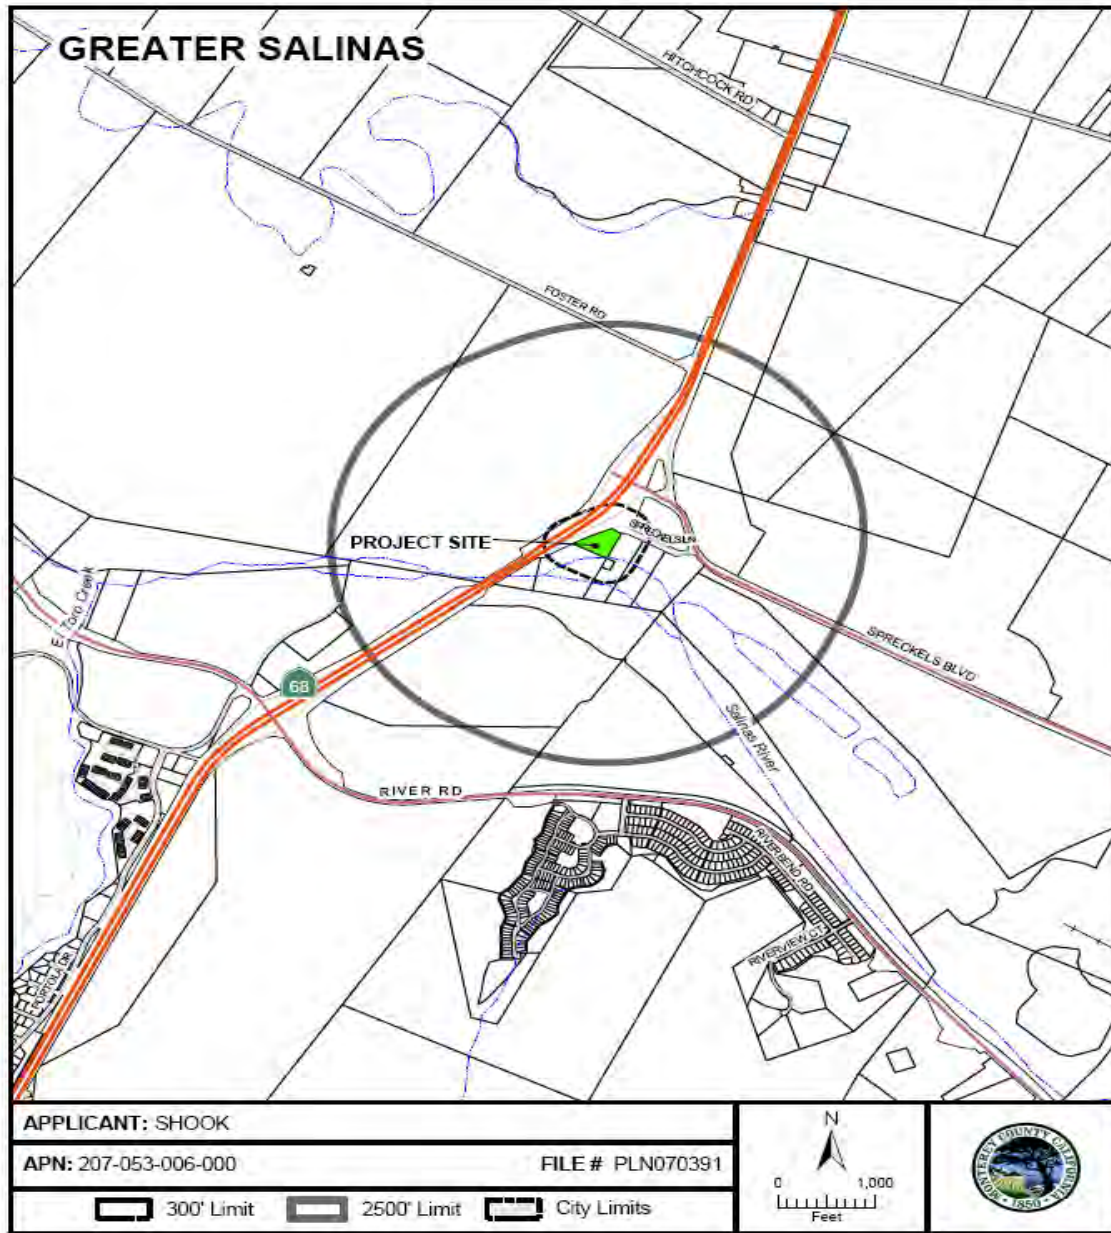

Planning Commission approval of a General Development Plan for the construction of the two proposed buildings totaling 37,680 square feet is required. In support of Planning Commission assessment of the project, an Initial Study, as well as the required reports listed in the main document, have addressed the potential impacts of the project and it has been determined that the project may be approved subject to the conditions of approval and measures identified by the Mitigated Negative Declaration for this Initial Study.

Amendments to a General Development Plan may be waived by the Director of RMA - Planning Department, if no potential significant adverse impacts are found.

The provisions below are now under the umbrella approval of the General Development Plan. Original language in project descriptions included the identifications below. For this reason, those portions of the project now covered by the General Development Plan are maintained in this document under use and administrative permit requirements for reference purposes.

USE PERMIT

This is identified as section (a) in the project description. The original provisions of this Use Permit were to allow Industrial and Commercial uses, except for auto repair. As noted above, the limitations of sewage treatment on this site, in addition to the location of the project site within the 100- year flood zone, require that the uses on the site exclude or require tailoring to provide for a wastewater flow of less than 630 gallons per day of wastewater on the site is proposed. This also means that any use which has a large cleaning or manufacturing component which typically requires the regular and extensive use of water in its process would be inappropriate for the site. Approval of the project development will include conditions of approval which the property owner will be required to address as the units are leased. Because these curtailments are a reflection of the limitation of the sewer system, the system's own limits to some extent regulate the site's uses and capacity for development.

ADMINISTRATIVE PERMIT

This is identified as section (b) in the project description. The proposed project was identified in the General Development Plan to be for construction of Tradesmen’s shops and other Light Commercial uses, which may be permitted with a General Development Plan allowed under Administrative Permit for the HC Heavy Commercial Zone. However, as noted above, this provision is further controlled by the above restrictions on use associated with sewerage limitations.

Traffic impacts of light residential use of a site as compared with the proposed uses has been reviewed in a traffic impact assessment and its potential traffic impacts are addressed by transportation management fees, with an estimate provided within the traffic report, “Spreckels Lane Industrial Center; Monterey County (Spreckels), California Project Trip Generation, Access and Traffic Impact Fee” (Pinnacle Traffic Engineering. June 18, 2008.)

The project site is located entirely within Zone A12, 100-year Floodplain of the Salinas River, as shown on the effective FEMA Flood Insurance Rate Map 060195-0315 D, dated January 30, 1984. The parcel is located partially within the Floodway; however, the proposed project is located within the Floodway Fringe. The Base Flood Elevation is 49 feet mean sea level (NGVD 1929).

As noted above, potential impacts of the existing 100-year floodplain upon which the project is sited have been addressed. The remainder of the property will be used for driveway and parking purposes, all of which are located outside of the Floodway itself, in accordance with US Army Corp of Engineers, state and local floodplain development requirements and project conditions.

Water supply for the project site is currently taken from an existing well, which will be replaced by a larger well, to be sunk at the northern portion of the property. Based upon assurances by well technicians, and with the determination of the Salinas Rural Fire District that, based upon the information at hand and the professional assurances provided, the new well would provide adequate fire flow, staff has agreed that the project preparation is adequate to submit PLN070391 to the Planning Commission for review.

Visual impacts are limited, based upon assessment of the existing shrub and trees onsite which are identified as remaining. Viewsheds from the south and west are most critical, since the project is viewed as part of the hillside above the Salinas River from the south, across Scenic Highway 68's bridge and to the east from the highway itself. Provisions of landscaping in the parking area, adding to the reduction of visual impact from the south along scenic Highway 68, are required to meet at minimum the landscaping requirements of ten percent for the HC zone, providing a minimum of 9,713 square feet of landscaping, either by existing plant materials or newly designed landscape areas.

Site review, photographic evidence, and the applicant's provision of staking support the determination that the project will be minimally visible from passing traffic along SR68. It is also noted that, while a scenic highway, SR68 provides a major view to the north and west of the project site; the site is currently, and upon completion of the project, will further be obscured by plant materials with landscape installation along the west side of Building "B".

Signage on the project site is addressed in the General Development Plan, which reflects the standards of the Monterey County Sign Ordinance (Ordinance No. 5099).

SITE IMPROVEMENTS

The project required site improvements include

- Grading of parking spaces at the south portion of the property in accordance with requirements that no significant volume of cut and fill be made adjacent to the flood channel.
- Installation of curbs and gutters for downslope areas.
- Provisions of methods to achieve conservation of sites with potential sensitive species, if found.
- Installation of landscaping identified in biological reports as outside of existing native areas not to be disturbed and as reflected in landscape plans.
- Installation of a six foot high chain link fence surrounding the property and a security gate at the front driveway.

ENVIRONMENTAL REVIEW - CEQA

In accordance with the California Environmental Quality Act, a Mitigated Negative Declaration was prepared in association with an Initial Study and filed with the County Clerk on October 31, 2008. The Mitigated Negative Declaration provided measures to avoid impacts to birds and traffic. A Notice of Intent to Adopt a Mitigated Negative Declaration was submitted for public review on October 31, 2008. Public review of this Initial Study/Mitigated Negative Declaration was provided from October 31, 2008 to December 1, 2008. During that period, staff received no public comments.

As noted above and in Finding No. 2, below, environmental review of the project site determined that Mitigation Measures were required to meet RMA - Planning Department, Salinas Rural Fire Protection District, Parks, Public Works, Environmental Health Division, and Water Resources Agency requirements and reduce the project's impacts to less than significant levels (**see Exhibit D**). Other associated issues, such as transportation and floodway impacts, have been addressed by payment of fees and project design. Revisions have been made to the project, Initial Study and its Mitigation Monitoring Plan as required and are presented herewith in support of the above required regulatory approvals.

ANALYSIS

The project as proposed conforms to the structural provisions of the Heavy Commercial zone; it will replace nonconforming, vacant residential structures with two tilt-up commercial type buildings. The design of the proposed project is minimally acceptable, having a slightly textured façade and color strips to reduce the impact of the buildings' flat, boxy surfaces. The site is screened from view from State Route 68 by existing trees located outside of the property. Landscape plans for the replacement of onsite trees as well as the planting of additional trees within the parking area and at the building façade lines will further reduce the visual impact, both from adjacent properties and roads and from the interior of the project site. Visual impact is also somewhat reduced by two-tone green paint. The applicant has provided an indication of signage with the footprint of a monument sign at the front of the project site and has noted in the General Development Plan that the project will basically conform to Sign Ordinance No. 5099.

With regard to natural habitat, the project site's biological study determined that none of note exist on this residential site, but also provides a means to address any habitat or species found during construction. During staff's site visit on September 24, 2008, it was noted that sand had been dumped on site preliminary to construction activities, over-covering what appear in the aerial photo, above, to be bare earth. Structures will be built in accordance with building requirements associated with commercial buildings within a 100-year flood plain; the floodway itself does not cross the property at any point, although it is located along the southwesterly property line.

The project will fill a need within the County of Monterey, where home occupations are allowed, but there is little available space in the County which provides an intermediate use, where employees can be onsite and an expanding business has facilities to provide for work, storage of goods and finished products. In addition, the project will provide small-scale storage facilities for warehousing personal property, such as recreational vehicles, and commercial goods. Although the site is limited by its ability to process sewage, limiting the uses to those which will not generate large volumes of waste water is intended to limit strain on the capacity of the system, and, although the number of uses are reduced, these limitations are not expected to reduce the potential for site use.

MITIGATED NEGATIVE DECLARATION

An Initial Study was prepared which identified potential environmental effects to aesthetics, air quality, biological resources, geology and soils, hazards and hazardous materials, hydrology and water quality and transportation/traffic. As a result of the study, it was determined that the proposed project would result in no impacts to cultural resources, land use planning as it related to habitat conservation and natural communities, mineral resources, population, or recreation facilities.

Issues which required further discussion included the impacts of a septic system on groundwater and adjacent property wellwater, as well as potential impacts of flooding on structures on site. Limitations to the types of projects allowed served to curtail impacts on the volumes of sewage entering the septic system through conditions of the Environmental Health Division. Requirements for fireflow increases and discussion of the scheduled provision of available water were supported to the satisfaction of the Salinas Rural Fire Department. Payment of transportation fees serve as a substitute for transportation reduction measures during construction and site use. These measures reduced the project's potential environmental impact to a determination that the project would not cause significant environmental effects due to the above revisions and, subsequently a Mitigated Negative Declaration has been prepared and submitted for public review from October 30, 2008 to December 1, 2008. No comments were received from the public.

CONCLUSION

Staff concludes that, with the conditions placed upon the project, and the proposed mitigation measures, the project's potential impacts will not be significant, and that the project will serve a need within the community which is not generally addressed by developers. The project, as conditioned and in accordance with mitigation measures, complies with the requirements of a Combined Development Permit. Therefore, staff recommends that the Planning Commission approve the Combined Development Permit for PLN070391 – Shook Commercial/Industrial Building as conditioned and its Mitigated Negative Declaration or direct staff regarding additional conditions or other actions.

EXHIBIT C
RECOMMENDED FINDINGS AND EVIDENCE

1. **FINDING: CONSISTENCY** – The project proposed, as described in Condition No. 1 and as conditioned, conforms to the policies, requirements, and standards of the Monterey County General Plan, the Greater Salinas Area Plan, and the Monterey County Zoning Ordinance (Title 21), which designates this area as appropriate for development.

- EVIDENCE:** (a) The text, policies, and regulations in the above referenced documents have been evaluated during the course of review of applications. No conflicts were found to exist. No communications were received during the course of review of the project indicating any inconsistencies with the text, policies, and regulations in these documents.
- (b) The property is located at Assessor’s Parcel No. 207-053-006-000, Greater Salinas Area Plan. The parcel is zoned Heavy Commercial (“HC”) which allows, by Use Permit, the development of the proposed project for two multi-use tilt-up buildings to be provided for multiple types of uses. Uses have been reviewed and revised to reduce septic system demand. Landscaping has been proposed which will reduce visual impact of the project site on SR-68, a scenic highway, and provide internal visual relief from the downslope view of the project’s parking areas.
- (c) Uses on this site are restricted, by the ability of the site’s wastewater system to process only a minimal daily wastewater level. The property is suitable for the proposed development, in that it provides for commercial/industrial uses consistent with the Heavy Commercial (HC) zoned property, conforms to requirements for development within a 100-year flood plain, is located within an area already obscured from view by existing trees, and will add other trees to further conceal the structure from passing view along SR68.
- (d) County Planning staff and the environmental consultant have conducted numerous site inspections, including a site inspection on September 24, 2008 to verify that the project on the subject parcel conforms to the plans listed above.
- (e) The project site includes the demolition of twelve structures, ten of which were originally military barracks buildings, relocated around 1947 from Fort Ord to the project site. In 1957, they were clad in asbestos siding, which was later over-covered with aluminum siding. In addition, a two-story residential structure building was constructed in 2002. Review of the project site determined that the structures lack historic importance and over the years their structural integrity has been compromised. These structures do not provide significant examples of a particular style or period of structure.
- (f) The project will be developed within a 100-year floodplain in accordance with US Army Corp of Engineers, state and county

requirements to reduce potential risks to property and human safety to the extent possible.

- (g) On November 28, 2007, the project was heard by the Spreckels Design Committee and, although the project is immediately adjacent to and outside the Spreckels area, the proposed use was seen as a positive step. This is a subjective view, but is based on the valuation of an existing abandoned non-conforming structure in comparison with a proposed development which conforms to commercial/industrial uses.
- (h) An Initial Study was required, due to the following issues: 1) Potential impacts of the proposed demolition of residential units and construction of speculative commercial/industrial buildings; 2) The need to determine historic significance of existing residential uses; 3) The difference in parking and traffic typical for each use; 4) The location of the entire site within a 100-year flood plain; 5) Construction impacts on the riverine areas adjacent to the site; and 6) The location of the project site at the boundary of Highway 68, a scenic vista highway. The project has undergone an Initial Study and associated site studies of geologic, biologic, historic, transportation, and archeological issues, with proposed mitigation incorporated herewith as conditions of approval.
- (i) The application, project plans, and related support materials submitted by the project applicant to the Monterey County RMA - Planning Department for the proposed development found in Project File PLN070391.

2. FINDING: SITE SUITABILITY – The site is physically suitable for the use proposed.

- EVIDENCE:**
- (a) The project has been reviewed for site suitability by the following departments and agencies: RMA - Planning Department, Salinas Rural Fire Protection District, Parks, Public Works, Environmental Health Division, and Water Resources Agency. Conditions recommended by these agencies have been incorporated.
 - (b) Technical reports by outside biological (Ray Parks and Associates, July 14, 2006), traffic (Higgins Associates, June 27, 2006), historical (Kent L. Seavey, June 20, 2006), archaeological (Archeological Consulting, June 2, 2006), and geological (Craig S. Harwood, November 3, 2006) consultants indicated that there are wastewater handling constraints which require that the project be restricted in its uses to provide adequate wastewater handling onsite; these requirements are physical or environmental constraints that would indicate that the site is not suitable for the use proposed. County staff concurs. The following reports have been prepared:
 - i. “A Biological Report for Spreckels Warehouse, 2 Spreckels Lane, Salinas California 93908, APN-207-0530006(sic)” (LIB 070543) prepared by Vern Yadon for Ray Parks and Associates, Carmel, California, July 14, 2006 (fieldwork: July 13, 2006).

- ii. “Spreckels Contractor Center Trip Generation” (LIB 070545)_prepared by Higgins Associates, Civil and Traffic Engineers, Carmel, California, June 27, 2006).
 - iii. “Preliminary Archeological Reconnaissance for Assessor’s Parcel 207-053-006, Spreckels, Monterey County, California” (LIB070747) prepared by Archeological Consulting for Ray Parks and Associates, Carmel, California, June 2, 2006).
- (c) Staff conducted a site inspection on September 24, 2008 to verify that the site is suitable for this use.
 - (d) As reviewed in detail in the Initial Study and the proposed Mitigated Negative Declaration, the site is suitable for the development proposed in that Geologic hazards are low, Erosion hazards have been addressed in accordance with 100-Year Flood zone development protocols, three trees proposed for removal will be replaced, and the property is not considered Environmentally Sensitive Habitat. Review of the site for potentially significant archeological resources has determined that the area does not contain surface evidence of potentially significant archeological resources. Furthermore, existing on-site structures do not qualify as historically important. Mitigation measures have been proposed to mitigate to less than significant levels potential impacts to Cultural Resources, Biological Resources, Hydrology and Water Quality, Land Use and Planning, Fire Protection, and Transportation (see Conditions 1- 31). Evidence supports the conclusion that impacts would be less than significant with mitigation incorporated for these resource subjects and that the site is suitable as conditioned for the uses proposed in the General Development Plan for the Shook Commercial Industrial Building.
 - (e) The project is located at 2 Spreckels Lane, Salinas, and is subject to the Monterey County General Plan and the Greater Salinas Area Plan. As described in Evidence for Finding #1, the Spreckels Commercial Industrial building proposal is consistent with the rules and regulations pertaining to zoning uses and other applicable provisions of Title 19 and Title 21, and is therefore suitable for the proposed development.
 - (f) The application, project plans, and related support materials submitted by the project applicant to the Monterey County Resource Management Agency – Planning Department for the proposed development found in Project File PLN070391.

3. **FINDING:** CEQA – On the basis of the whole record before the Monterey County Standard Subdivision Committee, there is no substantial evidence that the proposed project as designed, conditioned, and mitigated, will have a significant effect on the environment. The Mitigated Negative Declaration reflects the independent judgment and analysis of the County.

EVIDENCE: (a) The proposed project is subject to environmental review due to the potential for significant environmental effects pursuant to CEQA Guidelines Section 15070) Decision to Prepare a Negative or Mitigated Negative Declaration).

- (b) Potentially adverse environmental effects were identified during staff review of the development application.
- (c) The Monterey County and Denise Duffy Associates prepared an Initial Study pursuant to CEQA. The Initial Study is on file in the office of the RMA-Planning Department and is hereby incorporated by reference (file No. PLN070391). All project changes required to avoid significant effects on the environment have been incorporated into the project and/or are made conditions of approval. The Initial Study Identified potentially significant effects relative to Cultural Resources, Biological Resources, Hydrology and Water Quality, Land Use and Planning, Fire Protection, and Transportation (see Conditions 1- 31). Substantial evidence supports the conclusion that impacts will be less than significant with mitigation incorporated for these issues.
- (d) The Mitigated Negative Declaration was circulated for public review from October 30, 2008 to December 1, 2008.
- (e) The Monterey County Resource Management Agency – Planning Department (located at 168 W. Alisal Street, 2nd Floor, Salinas, CA 93901) is the custodian of documents and other materials that constitute the record of proceedings upon which the decision to adopt the Mitigated Negative Declaration is based.
- (f) A Condition Compliance and Mitigation Monitoring and Reporting Program (MMRP) has been prepared and is designed to ensure compliance with conditions and that mitigation measures are monitored and reported during project implementation. The applicant must enter into an “Agreement to Implement a Mitigation Monitoring and Reporting Program” as a condition of project approval.
- (g) For purposes of implementing Section 753.5 of Title 14, California Code of Regulations the project may cause changes to the resources listed under section 753.5. Therefore, payment of the Fish and Game fee is required.
- (h) Evidence that has been received and considered includes the application, plans, materials, and technical reports, which are listed under Section IX (References) of the Initial Study and contained in Project File PLN070391.
- (i) Comments received on the project did not present substantial evidence of any unmitigated significant impact. During the circulation period for the Proposed Mitigated Negative Declaration (October 30, 2008 to December 1 2008) no comments were received.
- (j) To mitigate the physical impacts of the project, the following is a summary of the mitigation measures proposed:
 - Cultural Resources: One mitigation measure for potential impacts to Cultural Resources is in the proposed Mitigated Negative Declaration. This requirement is to ensure that any uncovered cultural, archeological, historical or paleontological resources will result in stoppage of work and evaluation by a professional archeologist. (Condition PD-3a).

- Biological Impacts: Two mitigation measures for Biological resources are in the proposed Mitigated Negative Declaration. Both measures are associated with preconstruction surveys of nesting birds and worker training, and are time driven, based upon construction dates. (Mitigation Measures MM1 and MM2).
- Hydrology and Water Quality: Three mitigation measures for potential impacts to Hydrology are in the proposed Mitigated Negative Declaration: of these, one requirement for a drainage plan to be prepared in accordance with the requirements and approval of the Water Resources Agency; the structural height is required to be 50 feet above mean sea level, in accordance with floodproofing requirements and concrete slab inspection is required to achieve a FEMA Elevation Certificate for each building, submitted to the Water Resources Agency in compliance with floodplain structural stability requirements (Conditions WR01-WR03).
- Land Use and Planning: Ten mitigation measures regarding compliance with the plans as proposed from the Planning Department. In addition, three conditions of approval restricting land use to ensure reduction of septic system use from Environmental Health.
- Fire Protection: Seven mitigation measures regarding fire access, sprinkler installation, hydrant installation and fireflow requirements to ensure site fire safety (Conditions 11-17).
- Transportation: One mitigation measure requiring payment of a Transportation Agency of Monterey County's (TAMC) regional traffic mitigation fee, calculated to be \$43,000, for improvements to the regional circulation network (Mitigation Measure MM3).
- Comments received on the project did not present substantial evidence of any unmitigated significant environmental effects.

4. FINDING: NO VIOLATIONS - The subject property is in compliance with all rules and regulations pertaining to zoning uses, subdivision, and any other applicable provisions of the County's zoning ordinance. No outstanding violations exist on the property. Zoning violation abatement costs, if any, have been paid.

EVIDENCE: Staff reviewed Monterey County RMA - Planning Department and Building Services Department records and is not aware of any violations existing on subject property.

5. FINDING: HEALTH AND SAFETY - The establishment, maintenance, or operation of the project applied for will not under the circumstances of this particular case be detrimental to the health, safety, peace, morals, comfort, and general welfare of persons residing or working in the neighborhood of such proposed use, or be detrimental or injurious to property and

improvements in the neighborhood or to the general welfare of the County.

- EVIDENCE:**
- (a) The project site is restricted to uses which will not exceed the site's ability to provide sewage processing (631 GPD), as noted in 1(b). This requirement is to be recorded as part of the project approval.
 - (b) Structures are to be developed in accordance with requirements for commercial structures adjacent to floodways and within 100-year flood plans, as evidenced in site plans.
 - (c) Potential transportation impacts are addressed by mitigation measures consisting of a share of the regional traffic mitigation.
 - (d) Potential water quality and usage requirements have been met to the satisfaction of the Environmental Health Division, as conditioned.

6. FINDING: APPEALABILITY - The decision on this project is appealable to the Board of Supervisors and not the California Coastal Commission.

EVIDENCE: Section 21.80.040 Monterey County Zoning Ordinance (Title 21).

EXHIBIT D County of Monterey Resource Management Agency – Planning Department Condition Compliance & Mitigation Monitoring and/or Reporting Plan	Project Name: <u>SHOOK INDUSTRIAL/COMMERCIAL PROJECT</u>
	File No: <u>PLN070391</u> APNs: <u>207-053-006-000</u>
	Approval by: _____ Date: _____

**Monitoring or Reporting refers to projects with an EIR or adopted Mitigated Negative Declaration per Section 21081.6 of the Public Resources Code.*

Permit Cond. Number	Mitig. Number	Conditions of Approval and/or Mitigation Measures and Responsible Land Use Department	Compliance or Monitoring Actions to be performed. Where applicable, a certified professional is required for action to be accepted.	Responsible Party for Compliance	Timing	Verification of Compliance (name/date)
1.		PD001 SPECIFIC USES ONLY This Combined Development Permit (PLN070391) allows the construction of two (2) one-story, concrete tilt-up industrial buildings a total of 37,680 square feet (Building A: 21,280 square feet; Building B: 16,640 square feet). The property is located at 2 Spreckels Lane (Assessor’s Parcel Number 207-053-006-000), Greater Salinas Area Plan/Land Use Plan. This permit was approved in accordance with County ordinances and land use regulations subject to the following terms and conditions. Neither the uses nor the construction allowed by this permit shall commence unless and until all of the conditions of this permit are met to the satisfaction of the Director of the RMA - Planning Department. Any use or construction not in substantial conformance with the terms and conditions of this permit is a violation of County regulations and may result in modification or revocation	Adhere to conditions and uses specified in the permit.	Owner/ Applicant	Ongoing unless otherwise stated	

<i>Permit Cond. Number</i>	<i>Mitig. Number</i>	<i>Conditions of Approval and/or Mitigation Measures and Responsible Land Use Department</i>	<i>Compliance or Monitoring Actions to be performed. 		of this permit and subsequent legal action. No use or construction other than that specified by this permit is allowed unless additional permits are approved by the appropriate authorities.				
		To the extent that the County has delegated any condition compliance or mitigation monitoring to the Monterey County Water Resources Agency, the Water Resources Agency shall provide all information requested by the County and the County shall bear ultimate responsibility to ensure that conditions and mitigation measures are properly fulfilled.				
2.		PD002 NOTICE-PERMIT APPROVAL The applicant shall record a notice which states: "A permit (Resolution #_____) was approved by the Planning Commission for Assessor's Parcel Number 207-053-006-000 on (January 28, 2009). The permit was granted subject to 31 conditions of approval which run with the land. A copy of the permit is on file with the Monterey County RMA - Planning Department." Proof of recordation of this notice shall be furnished to the Director of the RMA - Planning Department prior to issuance of building permits or commencement of the use.	Proof of recordation of this notice shall be furnished to the RMA - Planning Department.	Owner/ Applicant	Prior to the issuance of grading and building permits or commencement of use.

SALINAS RURAL FIRE DISTRICT						
11		FD030 NON-STANDARD CONDITIONS ROAD ACCESS Access roads shall be required for every building when any portion of the exterior wall of the first story is located more than 150 feet from fire department access. All roads shall be constructed to provide a minimum width of 20 feet with an unobstructed vertical clearance of not less than 15 feet. The roadway surface shall provide unobstructed access to conventional drive vehicles including sedans and fire apparatus and shall be an all-weather surface designed to support the imposed load of fire apparatus (22 tons). Each road shall have an approved name. (Salinas Rural Fire District)	Applicant shall incorporate specification into design and enumerate as “Fire Dept. Notes” on plans.	Applicant or owner	Prior to issuance of grading and/or building permit.	
			Applicant shall schedule fire dept. clearance inspection for each phase of development.	Applicant or owner	Prior to final building inspection.	
12		FD030 FIRE PROTECTION EQUIPMENT & SYSTEMS - FIRE SPRINKLER SYSTEM (STANDARD) Any building having a total floor area greater than	Applicant shall enumerate as “Fire Dept. Notes” on plans.	Applicant or owner	Prior to issuance of building permit.	

<i>Permit Cond. Number</i>	<i>Mitig. Number</i>	<i>Conditions of Approval and/or Mitigation Measures and Responsible Land Use Department</i>	<i>Compliance or Monitoring Actions to be performed. Where applicable, a certified professional is required for action to be accepted.</i>	<i>Responsible Party for Compliance</i>	<i>Timing</i>	<i>Verification of Compliance (name/ date)</i>
		5,000 square feet shall be fully protected with automatic fire sprinkler system(s). Installation shall be in accordance with the applicable NFPA standard. A minimum of four (4) sets of plans for fire sprinkler systems must be submitted by a California licensed C-16 contractor and approved prior to installation. This requirement is not intended to delay issuance of a building permit. A rough sprinkler inspection must be scheduled by the installing contractor and completed prior to requesting a framing inspection. (Salinas Rural Fire District)	Applicant shall schedule fire dept. rough sprinkler inspection	Applicant or owner	Prior to framing inspection	
			Applicant shall schedule fire dept. final sprinkler inspection	Applicant or owner	Prior to final building inspection	
13		FD030 NON-STANDARD CONDITIONS - FIRE ALARM SYSTEM - (COMMERCIAL) Any sprinklered building having 50 or more fire sprinklers shall be fully protected with an approved central station, proprietary station, or remote station automatic fire alarm system as defined by NFPA Standard 72. Plans and specifications for the fire alarm system shall be submitted by a California licensed C-10 contractor and approved prior to requesting a rough sprinkler or framing inspection. (Salinas Rural Fire District)	Applicant shall enumerate as “Fire Dept. Notes” on plans.	Applicant or owner	Prior to issuance of building permit.	
			Applicant shall submit fire alarm plans and obtain approval.	Applicant or owner	Prior to rough sprinkler or framing inspection	
			Applicant shall schedule fire alarm system acceptance test.	Applicant or owner	Prior to final building inspection

14		<p>FD030 NON-STANDARD CONDITIONS – HYDRANTS AND FIRE FLOW-</p> <p>Hydrants for fire protection shall be provided at locations approved by the Salinas Rural Fire District and shall conform to the following requirements:</p> <p>a. FIRE FLOW - Pursuant to Uniform Fire Code Appendix III-A, the minimum fire flow requirement for 21,040 square foot commercial facilities built with Type V-N construction is 4,000 gallons per minute with a residual pressure of 20 psi under normal operating conditions for a duration of 4 hours. Fire flow for facilities protected with automatic fire sprinkler systems may be reduced to 1,500 gallons per minute with a residual pressure of 20 psi under normal operating conditions for a duration of 4 hours.</p> <p>b. TIMING OF INSTALLATION - Approved fire protection water supply systems must be installed and made serviceable prior to the time of construction.</p> <p>c. HYDRANT/FIRE VALVE (ADDITION) – A new hydrant shall be installed.</p> <p>d. HYDRANT/FIRE VALVE (LOCATION) - The hydrant or fire valve shall be 18 inches above grade, 8 feet from flammable vegetation, no closer than 4 feet nor further than 12 feet from a roadway, and in a</p>	<p>Applicant shall incorporate specification into design and enumerate as “Fire Dept. Notes” on plans.</p>	Applicant or owner	Prior to issuance of grading and/or building permit.	
			<p>Applicant shall provide improvement plans to the fire district. Applicant shall schedule fire dept. clearance inspection for each phase of development.</p>	Applicant or owner	Prior to issuance of Building Permit	

<i>Permit Cond. Number</i>	<i>Mitig. Number</i>	<i>Conditions of Approval and/or Mitigation Measures and Responsible Land Use Department</i>	<i>Compliance or Monitoring Actions to be performed. Where applicable, a certified professional is required for action to be accepted.</i>	<i>Responsible Party for Compliance</i>	<i>Timing</i>	<i>Verification of Compliance (name/ date)</i>
		location where fire apparatus using it will not block the roadway. e. FIRE HYDRANTS - Hydrants shall be installed in accordance with spacing set forth in Uniform Fire Code Appendix III-B and in accordance with the following specifications: f. HYDRANT SIZE - The hydrant shall have a minimum of two (2) 2-1/2 inch outlets NST and one (1) 4-1/2 inch outlet NST. The riser shall be a minimum of six (6) inches and shall be wet barrel type with a coefficient of 0.9. g. SIGNING OF WATER SOURCES - Hydrant or fire valve identification may be allowed as specified in the State Fire Marshal’s Guidelines for Fire Hydrant Markings Along State Highways and Freeways, May 1988. (Salinas Rural Fire District)				
15		FD030 NON-STANDARD CONDITIONS – EMERGENCY ACCESS KEYBOX – Emergency access keybox shall be installed and maintained. The type and location shall be approved by the fire department. The fire department shall be notified when locks are changed so that the emergency access keybox can be maintained with current keys. (Salinas Rural Fire District)	Applicant shall incorporate specification into design and enumerate as “Fire Dept. Notes” on plans. Applicant shall schedule fire dept. clearance inspection for each phase of development.	Applicant or owner Applicant or owner	Prior to issuance of building permit. Prior to final building inspection.
